KOA SPEER ELECTRONICS, INC.

OF RESISTORS SHIPPED EVERY MONTH

With 99%+ On-Time Delivery...

You Can Count on KOA Speer

At KOA Speer, we ship Billions of resistors every month! And, despite that volume, our 99%+ on-time performance and service levels are off the charts. We offer a diverse and expanding family of surface mount and leaded resistors, all backed by our Quality 1st mandate to deliver unmatched service and product quality. Let KOA Speer help take your design from **Concept to Reality!**

Our commitment to quality in everything we do is paying off... as we consistently receive customer quality and service awards. We're the industry's most recognized and awarded supplier for achieving the highest product quality, on-time delivery and responsive customer service.

Quality 1st

SOLUTIONS • SERVICE • DELIVERY Quality 1st

You expect product quality from any component that makes it into one of your designs. But in today's competitive global marketplace, there's more to the quality equation. At KOA Speer, our Quality 1st initiative reinforces our organization wide focus on serving you at the highest possible level.

ISO 9001:2015

KOA SPEER... More Than Just Resistors

Resistors

Precision • Surge • Wide Terminal
High Voltage • Thin Film
High Temperature • General Purpose
Networks • Anti-Sulfur • Fusing • MELF

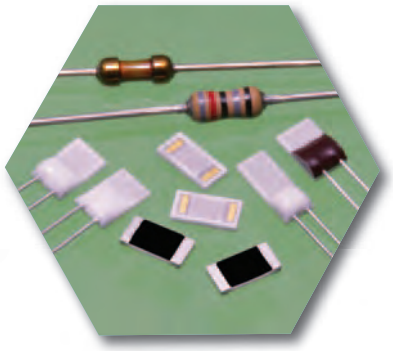
Low Resistance Current Sense/Shunts

Metal Plate • Thick Film • Power Shunt
Molded • Wide Terminal

Leaded Resistors

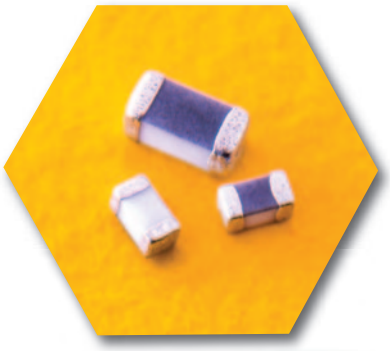
General Purpose Carbon Film
Precision Metal Film • High Voltage • Power
Wirewound • Current Sense • Networks
Fusing • Jumpers

Thermistors/ Thermal Sensors



Platinum Thin Film
Thin Film Linear PTC
Thick Film Linear PTC

Inductors



Chip Inductors

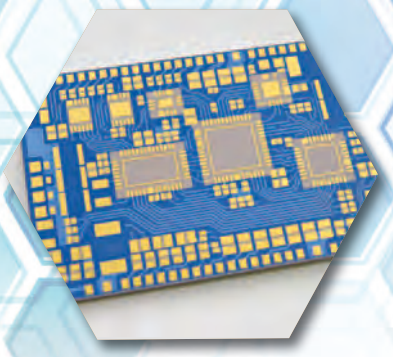
Fuses

Thin Film • Automotive
Fast Blow • Anti-Surge

Varistors

Chip Varistors • Automotive Varistors

LTCC Substrates



LTCC Substrates • Hybrid IC

Other Products

Check Terminal • Lab Kits

KOA® Current Sense Resistors Selection Guide

KOA SPEER ELECTRONICS, INC.

KOA offers complete family of Current Sense Resistors capable of sensing large to small currents with ultra-low resistance

Applications: Current management sensor including charge/discharge of secondary batteries • Current control sensor of motors and DC/DC converters • Circuit protecting sensor by overcurrent detection

Current Sense Resistors	Part		Current Ratings (A) min	Current Ratings (A) max	Resistance	Rated Power	Size	Tolerance
Large Current Shunt Resistors • Metal Plate Resistive Element • Large Current, High Precision	HSAN2P4022 HSAN2P8022		300	1000	50$\mu\Omega$	50W	40x22mm 80x22mm	±5%
	HSAN2P4015 HSBN2P8018		300	600	100/200$\mu\Omega$	18W/36W	40x15mm 80x18mm	±5%
					Resistance Range	Rated Power	Size (Inch)	Tolerance
Power Shunt Chip Resistors • Metal Plate Resistive Element • Large Current, High Precision	PSL2		126.5	212.1	0.2m/0.3m/0.5m	8W/9W	2512	±1%

- This selection guide plots the current value calculated from (Power rating÷upper or lower limit of resistance). Please build the design considering heat dissipation.
- This is the guideline to select products by current value. Please confirm product specification for actual design and selecting products and use the products based on the precautions to use.
- Please confirm our catalog or delivery specification for the details of each product.

*1 UR73/UR73D is only applied for car accessories as automotive use. Please ask us for details.

KOA SPEER ELECTRONICS, INC.

Restrictions of Hazardous Solutions

At KOA, we know taking care of the environment is important. That is why we have taken the steps to ensure we offer a product that fits your needs while adhering to global environmental regulations. In 2006, we complied with the EU's RoHS Directive, allowing us to offer products that are RoHS compliant, and in 2007 we met guidelines outlined in the IT Products Pollution Control Act for the People's Republic of China. In addition, we are now enforcing stricter chemical regulations set by Europe through watching the chemical input of our products. Our laboratory is now ISO/IEC 17025 certified, and we are constantly working to think of ways to improve our technology, such as by offering halogen-free specifications. By actively addressing our environmental impact today, you can be certain KOA will be there in your future.

EU RoHS COMPLIANT

EU RoHS

The restriction of Hazardous Substances Directive (2002/95/EC), (RoHS), became effective on July 1 of 2006 requiring the usage of restriction of following six hazardous substances in the manufacture of electrical and electronic equipment placed on the market. This directive was amended on June 8 of 2011, to Recast Directive 2011/65/EU of the European Parliament and of the Council. The original directive was expired as of January 2, 2013 and replaced by a new directive (2011/65/EU) on the following day. Later, Annex II (Restricted Substances List) was amended by Commission Delegated Directive (2015/863/EU) and four phthalates were added to the restricted substances list. The followings are restricted substances and maximum concentration:

- Lead (0.1wt%)
- Mercury (0.1wt%)
- Cadmium (0.01wt%)
- Hexavalent Chromium (0.1wt%)
- Polybrominated biphenyls [PBBs] (0.1wt%)
- Polybrominated diphenyl ethers [PBDEs] (0.1wt%)
- Bis (2-ethylhexyl) phthalate [DEHP] (0.1wt%)
- Butyl benzyl phthalate [BBP] (0.1wt%)
- Dibutyl phthalate [DBP] (0.1wt%)
- Diisobutyl phthalate [DIBP] (0.1wt%)

* The percentage in parentheses show the maximum concentration value in the homogeneous material.

The restriction of applications in the annex in the directive is exempted.
KOA's products applicable with this exemption to EU RoHS2 are as follows (as of July 2022):

- Copper alloy containing up to 4% lead by weight 6(c).
- Electrical and electronic components containing lead in a glass or ceramic other than dielectric ceramic in capacitors, e.g. piezoelectronic devices, or in a glass or ceramic matrix compound 7(c)-I.

To meet EU RoHS2, you need to choose lead (Pb) free material for termination surface material when our product has both type designation, leaded and lead free. Please contact our sales representatives for details.

Revised Chinese RoHS

(Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products)

China RoHS became effective in March 2007 and the Revised China RoHS was promulgated in January 2016 and became effective on July 1, 2016. The compliance management catalog (target products) and exemption list for the second step (inclusion restriction) were released in March 2018 and we must comply with requirements of the "evaluation system" from November 1, 2019.

For each product, we disclose the content information of the six hazardous substances directed by China RoHS. Please contact our sales representatives for details.

REACH

"Regulation concerning the Registration, Evaluation, Authorization and Restriction of Chemicals" (REACH) has been enforced on June 1 of 2007 in EU area.

This regulation is aiming at safety evaluation and risk management of chemical substances, which are required to register according to the amount if used in businesses. Substance of Very High Concern (SVHC) must be registered if it is included in article. The European Waste Framework Directive has also been revised. As a result, products placed on the EU market after January 2021 are required to register SCIP data if the concentration of SVHC exceeds 0.1wt% in order to also provide information on environmentally hazardous substances to waste disposal companies. Information communication on such substances is also required throughout the supply chain using information communication tools such as chemSHERPA.

KOA SPEER ELECTRONICS, INC.

Caution & Terms

general precautions

Precautions

All product specifications and data are subject to change without prior notice. Be sure to request and confirm the latest technical specifications before you order or use a part.

Matters common to all products

General

- For precautions in general, refer to "JEITA RCR-1001C Safety application guide on components for using electronic and electrical equipment" issued by JEITA.
- While the information and figures on the durability performance of the products we provide are accurate and highly reliable, based on fixed test conditions, please conduct advance testing with your own products. If you are unable to determine the suitability for each application, please be sure to contact us beforehand.

Disclaimer

- These products have been designed and manufactured for general use and are not intended for use in the following applications or those involving equivalent risks. When considering use of these products for these applications, etc., please be sure to contact us in advance. In addition, regarding the conditions such as the scope of the warranty provided to our customers, without special agreement in writing, we bear no responsibility whatsoever for any complaints, damage, etc. regarding these products when used for these applications, etc.
  1. Applications requiring high reliability (Ex.: gas/plumbing/electrical systems, etc., 24-hour continuous operation systems, settlement systems and other applications handling rights and assets, etc.)
  2. Applications requiring a high degree of safety (Ex.: automobiles, aerospace facilities, railway facilities, medical devices, safety equipment, other applications which may involve risk to life or limb, etc.)
  3. Applications in harsh environments (Ex.: equipment installed outdoors, equipment exposed to chemical pollution, equipment exposed to electromagnetic interference, equipment receiving vibration/impacts, etc.)
  4. Applications under conditions and/or in environments not listed in the Catalogs.
- Consider sufficient fail-safe design if the products are used in applications requiring high reliability. Ensure safety of a whole system by setting proactive circuits and redundant circuits to avoid the single failure of the product leading to unsafety of the equipment.

Environment for Use

- Unless otherwise specified, these products are not to be used in special environments. Examine and confirm performance and reliability before you use KOA products in any of the following environments:
  1. Under direct sunlight, exposed to the outside or to dust.
  2. In liquids such as water, oil, organic solvent, or liquid chemicals or in areas where these liquids are used.
  3. In locations where the products are exposed to salt-water breezes or corrosive gases, including SO_2, H_2S, Cl_2, NH_3, NO_2, etc.
  4. In locations with high static electricity and strong electromagnetic waves.
  5. In locations subject to condensation from dew.
  6. When the products or PCBs are sealed and coated by resin or other coating materials.
  7. In locations where the products are exposed to the fumes of lubricating oil.

Sulfuration

- Products with silver-based electrodes may increase in resistance in atmospheres containing sulfur gases (SO_2, H_2S, etc.) or when exposed to sulfide compounds. Take anti-sulfur measures in these environments.

Anti-pulse Characteristics

- If transient overloads such as power pulse or voltage/current surges are applied to KOA products, performance and reliability may be degraded. Contact KOA for data on antipulse characterstics and design help.
- Pay attention to discharges between terminations (arc-over) when high voltages are applied.

Storage

- Store KOA products in dust-free areas and keep them away from extreme temperatures; moisture; condensation; direct sunlight; salt-water breezes; corrosive gases such as SO_2, H_2S, Cl_2, NH_3, NO_2, etc.; or fumes from lubricating oil. Use desiccants if necessary.
- Please contact KOA for conditions and length of storage.

Storage of the Products with Lead-free Termination

- Solderability may degrade faster for products with Pb-free terminals than for products with Pb-bearing terminals.

Mounting

- Avoid physical damage or shock to the products, which may happen by holding them with hard tools like pliers or tweezers or by imperfect mounting-machine alignment. This damage may affect electrical characteristics or lead to disconnection or cracking.
- If the bottom point of the mounting nozzle is too low, a product could be pushed onto the PCB, which may deteriorate electrical characteristics or lead to cracking. Decelerate the nozzle just before mounting, and mount the product after correcting PCB deformations.
- Do not use products that have fallen during mounting or that have already been removed from a PCB.
- Contact KOA if PCBs are molded or sealed by coating material after component mounting.
- Do not stack PCBs after mounting, because this may damage the components.
- The electrical characteristics of film-type resistors and sensors may be changed by electrostatic overvoltage. Keep electrostatic discharge away from components when assembling and handling by monitoring machines and human contact.
- Prevent or eliminate the introduction of ionic substances like salt, salinity, or sweat, as these substances may degrade resistance due to moisture or corrosion.

Soldering

- Perform soldering within the temperature, time, and number of cycles specified for the product or its precautions. If a product is exposed to high temperatures for long periods of time, its color or electrical characteristics may change or disconnection may occur.
- Prevent any external force from being applied to the products until solder has cooled.
- Handle carefully to prevent mechanical stresses, such as from the bending or warping of a PCB, on the solder fillet.
- Confirm that solder flux residue does not affect the product.
- Confirm that components are in place when conductive adhesive is used in place of solder.

Precautions for Soldering with Lead-free Solder

- In Pb-free soldering, temperature may be higher than in the use of eutectic solder. Confirm that soldering is acceptable under actual conditions.
- Solder fillets may lift off double-sided boards with through holes. Confirm the solder strength on actual board material before assembly.

Washing

- Confirm that solder flux residue does not remain after washing, because it may cause deterioration of moisture and corrosion resistance.
- Confirm reliability in advance when using no-clean solder, water, or a soluble agent.
- Since Pb-free solder may contain many ionic materials, use RMA type solder or flux or wash sufficiently.
- Wash thoroughly after soldering to remove ionic substances like sweat and salinity. Control the washing agent appropriately to remove all ionic substances. Consult KOA when using a washing agent such as acid, alkaline, or organic solvent other than alcohol.
- Ultrasonic washing may damage products due to vibration resonance. High hydraulic pressure may also damage products. Ask KOA in advance for washing conditions.
- Dry products thoroughly after washing.

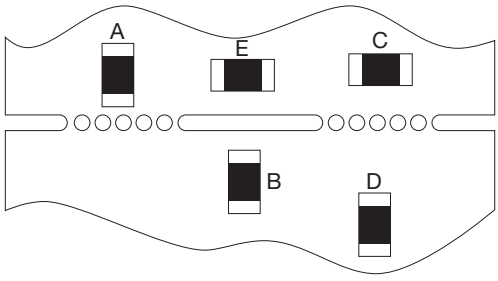
Dispose of the Products

- Observe appropriate laws and regulations for handling and disposal of products or packing materials.

The following precautions apply to surface mount devices

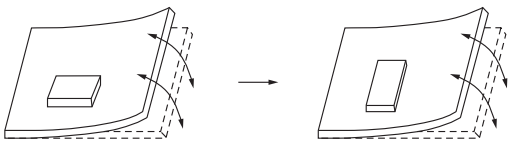
Precautions Related to PCB Bending Stress

- Arrange the long side of chip components parallel with the direction of the smaller coefficient of thermal expansion in anisotropic PCBs.
- Cracking of the solder fillet may occur with thermal cycling, because of mismatch of coefficients of thermal expansion between the board and the component. Pad size, amount of solder, and amount of heat radiating from the PCB must be designed carefully, especially with large components of 5 mm x 2.5 mm or larger.
- If products are mounted near a depaneling line, the termination or component may be damaged by large stresses during depaneling. Mount the products as shown in the following figure to minimize depaneling stress.



The level of stress on terminations A>B≠C>D>E

- Use proper layouts to avoid stress from warping, bending, or deformation of the board in order to avoid solder cracking or component damage.



Large stress Small stress

- Pay careful attention to products mounted near the edge of the board or near connectors, since stresses may happen during connection.
- Pay careful attention to layout when products are mounted near large components, when solder solidifies, it creates a stress in directions based on the large components, and cracking may occur.
- Design each land on right and left to have the same size. Different land size may change characteristics or cause cracks and tombstone effect while the solder is cooled down.

Mounting and Soldering

- Poor mounting machine adjustment may cause cracking, chipping, or alignment errors. Check and inspect the mounting machine in advance.
- Set backup pins in an appropriate layout to avoid damage to components mounted on the back of the board. Do not set these pins at nozzle positions.
- Adjust the bottom dead point of a dispenser away from the board when you apply adhesive to avoid damage to components mounted on the back of the board.
- Confirm that products solder properly if wave soldering is used.
- Pay close attention to amount of solder, since an improper amount may create a large stress on the component and cause cracking or malfunctions.

Soldering with a Soldering Iron

- Solder using a soldering iron at the temperature specified in the technical specifications or precautions for each product.
- Perform preheating as much as possible.
- Keep the tip of the soldering iron away from the body and the product terminal.
- Avoid physical damage or shock to components when using hard tools like pliers and tweezers.

The following precautions apply to lead type devices

Mechanical Stress

- Play close attention to vibration resonance after mounting.
- Do not add additional bending or twisting stresses to the product.
- Fix large components firmly.
- When lead wires are to be bent, use a large radius of curvature to avoid excessive stress on the terminal joint. Excessive stresses may cause the lead wire to separate from the electrode cap and damage the product.
- Do not add excessive stresses to the product body when lead wires are cut or held by the mounting machine.

Temperature Rise

- Pay close attention to heat radiation and interaction with other components, since large resistors general a large amount of heat when the rated power is applied.

KOA SPEER ELECTRONICS, INC.

Caution & Terms

derating curves

Introduction of the Derating Curves Based on the Terminal Part Temperature

Background

Recently, the miniaturization, high power density and high temperature of the usage environment for the automotive devices have advanced. And requests for resistors to conform the high temperature is increasing. Figure 1 is the derating curve based on the terminal part temperature and this is introduced to realize these requests for the surface mount resistors safely. Rated terminal part temperature is the maximum terminal part temperature of the surface mount resistor at which the rated power may be applied continuously including the temperature rise by self heat generation.

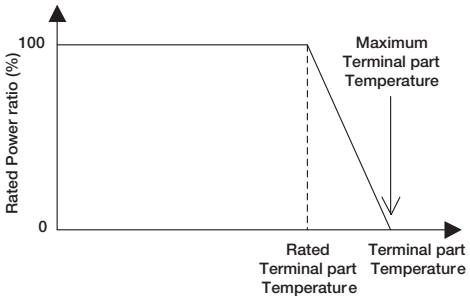


Figure 1. Derating curve based on the terminal part temperature

The derating curves based on the terminal part temperature is already used in the metal plate type ultra-low resistance value resistors for current sensing. It is because these resistors are used in sensing of large currents such as inverters and converters which the terminal part temperature rise irrelevantly from the ambient temperature because of the generated heat from the nearby switching elements or the large current applied to the copper pattern. This point of view was deployed to the general resistors as well.

Overview of the Establishment of the Derating Curves Based on Ambient Temperature

The traditional derating curve, which is based on ambient temperature, was defined by IEC and JIS during the vacuum tube era, long before the appearance of surface-mount resistors. At the time, there were no printed circuit boards, and cylindrical resistors with lead wires were held above the board by lug terminals, as shown in figure 2.

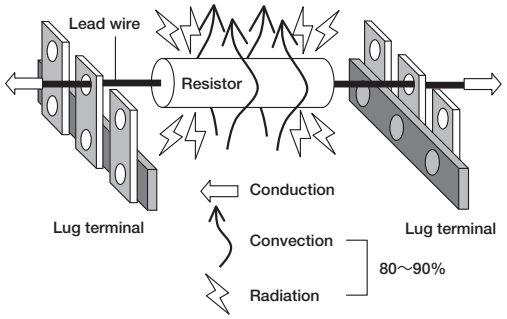

Figure 2. Heat dissipation of cylindrical resistors

The Joule heat that is generated in the resistor is dissipated in three pathways regardless of the shape of the resistor. The first path is conduction to the connected parts such as the terminal. The second path is convection including the heat transfer to the atmosphere by natural convection and airflow. The third path is radiation by infrared.

The larger the area connected to the resistor becomes, the larger the heat conduction will be. And the larger the surface area of the resistor becomes, larger the convection and radiation will be.

When cylindrical resistors with lead wires are mounted on lug terminals, the lead wire is long and thin, so the thermal resistance to conduction is high, and heat dissipation through that path is low. On the other hand, the dissipation of heat by convection and radiation is high, because the surface area of the resistor is large. Simulation shows that 80% to 90% of the heat from a cylindrical, lead-wire resistor is dissipated directly into the ambient air. The temperature of the resistor can be calculated by adding the temperature rise caused by self-heating to the ambient temperature. Because the ambient is sufficient to estimate the thermal resistance for most of the heat dissipation, the traditional derating curve was based on it.

Heat Dissipation of Surface Mount Resistors

Figure 3 shows the main heat dissipation paths for modern surface mount resistors. This type of resistor has only a small surface area, so convection and radiation have proportionally less heat dissipation. On the other hand, since the device is directly connected to the PCB pattern by a large part of the surface area, conduction will be the primary path for heat dissipation. In general, conduction through the terminal to the board represents over 90% of the heat dissipation, even when convection and radiation are presumed to be at their maximum levels. Therefore, the terminal temperature, on the main heat pathway, is the best location to monitor for controlling power dissipation.

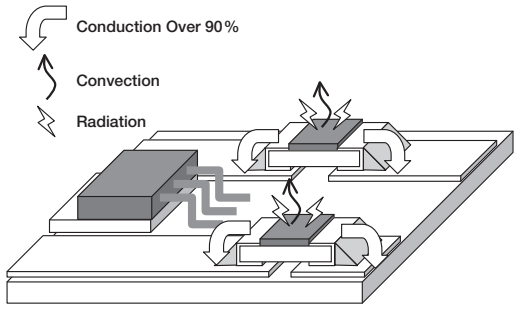

Figure 3. Heat dissipation of surface mount resistors

Derating Curve Suitable for the Surface Mount Resistor

As shown in figure 4, when a given amount of power is applied to the resistor, any given point on the resistor's surface will have the same temperature rise over the terminal temperature, regardless of ambient temperature. This is because there is very little heat dissipation from the resistor's surface to the ambient air.

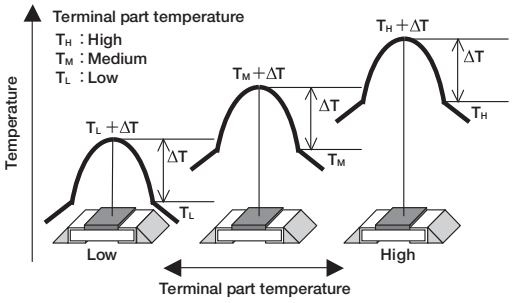

Figure 4. Contributing factor to the temperature of the surface mount resistor

However, surface temperatures at a given power will differ between different PCB designs, since the terminal temperature will be different. When resistors are mounted close to each other or other heat-generating devices, as shown in figure 5, there is a possibility that the temperature will be higher than the 70°C ambient temperature threshold used in the traditional JIS/IEC derating curve.

The traditional derating curve based on ambient temperature usually uses 70°C as the ambient temperature above which parts are to be derated. There will be no problem if resistors are used with sufficient electrical and thermal margin, but recent trends to miniaturization, high power density, and high-temperature use have reduced margins on design.

Redefining derating based on terminal temperature is a way to better represent the capabilities of the part. KOA will provide a derating curve suitable for surface mount resistors, based on testing under conditions where power rating is defined in terms of terminal temperature (as seen in terms & definitions).

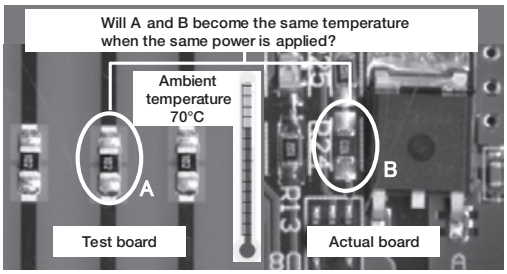

Figure 5. Temperature differs depending on the board

How to Use the Derating Curve Based on the Terminal Part Temperature

Here are some examples on using terminal temperature derating that lead to greater factors of safety, reduction in number of resistors, or use of a smaller component. The prior conditions will be the following (Be aware that the terminal part temperature does not always become 120°C when the ambient temperature is 100°C):

(1) Ambient temperature of the board: 100°C

(2) Terminal temperature of the surface mount resistor: 120°C

(3) Actual power load: 0.05W

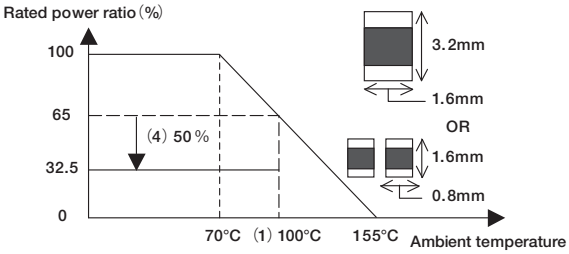

Figure 6. Selection by the traditional derating curve

(4) Required margin of safety below rating according to designer's internal guidelines: 50%

The required power rating for the resistor using the ambient-temperature derating curve is calculated from conditions (1), (3), and (4). Figure 6 shows this result. For KOA's RK73B resistor series, one piece of 2A size, or two pieces of 1W size will be required.

However, when a resistor is selected using the terminal-temperature derating curve, which is better suited to surface-mount parts, conditions (2), (3), and (4) show that a single 1E (0402) size RK73B resistor would be sufficient.

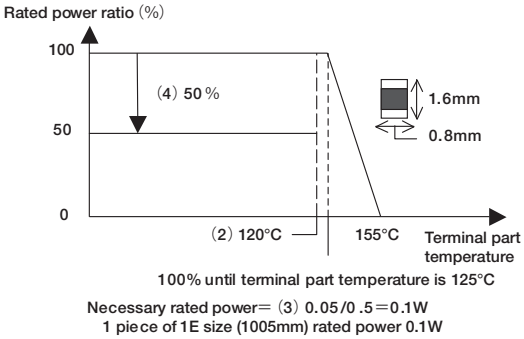

Figure 7. Selection using a terminal-temperature derating curve

As seen above, the number of resistors and the mounting area can be reasonably reduced by using the proper derating curve based on terminal temperature, and this will lead to cost savings.

Type	Power Rating	Rated Ambient Temp.	Rated Terminal Part Temp.
SG73S 2A	0.25W	70°C	125°C
SG73P 2A	0.5W	70°C	100°C

Table 1. Rating column of products with 2 rated power

Derating curve suitable for the surface mount resistor

As shown in Table 1, for the surface mount resistors, there are products that have 2 rated powers for the same type in the rating column. The high rated power is basically available and applicable only to boards with adequate heat dissipation design for example multilayer boards, DCB (direct copper bonding) boards and single layer boards with wide heat dissipation area land. Therefore, the horizontal axis of the derating curve for high rated power is only defined with the terminal part temperature and please be careful that the conventional derating curve defined by the ambient temperature cannot be used in this case. For these products, "-" will be shown in the rated ambient temperature column which means "Not Applicable."

In addition, we implement load life tests for the products with high rated power by using a test board that can specially control the terminal part temperature.

In the case of Table 1, there will be 3 derating curves as shown from Figure 8 to Figure 10.

How to use each derating curve is shown as the following.

When 0.25W is the rated power

When the terminal part temperature can be measured:

The derating curve in Figure 8 can be applicable and it can be used with rated power 0.25W up to terminal part temperature 125°C. The derating curve with the horizontal axis based on the terminal part temperature supersedes the conventional derating curve with the horizontal axis based on the ambient temperature. Therefore, even when the ambient temperature exceeds 100°C, it can be used with rated power 0.25W as long as the terminal part temperature is below 125°C.

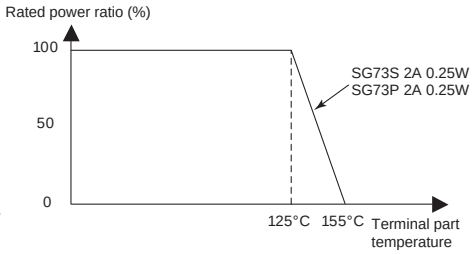

Figure 8. Derating curve of 0.25W rated power based on terminal part temperature

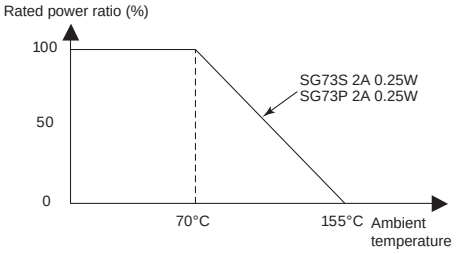

Figure 9. Derating curve of 0.25W rated power based on ambient temperature

When the terminal part temperature is not measured and only the ambient temperature is measured:

The product may be used by derating the load power from the ambient temperature 70°C according to the conventional derating curve shown in Figure 9. However, as mentioned in the past descriptions, the temperature of the resistor differs according to the wiring patterns and heat generating components nearby, even when the ambient temperature is the same, so it is not a derating method with good precision.

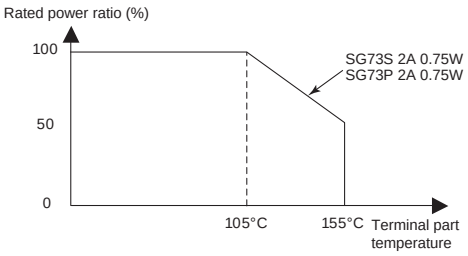

Figure 10. Derating curve of 0.75W rated power based on terminal part temperature

When 0.75W is the rated power

Managing the terminal part temperature is the requirement to apply the rated power 0.75W. Only the derating curve with the horizontal axis based on the terminal part temperature as shown in Fig.10 can be used but it can assure up to the high power. The product can be used with 0.75W if the terminal part temperature is below 105°C.

KOA SPEER ELECTRONICS, INC.

Caution & Terms

resistors

Precautions for the Resistors

Refer to the precautions of common matters for all products in the beginning of this catalog for the matters common to all products.

General in Fixed Resistors

- When the resistors are operated in ambient temperature above the rated temperature, the power rating must be derated according to the derating curve.
- Resistors in general may emit flame, fire or smoke when overload is applied.
- Flame retardant resistors may emit smoke or appear red hot when overload is applied but are unlikely to emit flame or fire.
- When the resistors are sealed and coated by coating materials such as resin, deterioration of the resistor by thermal stress or resin may affect the characteristics. Confirm with KOA for the performance and reliability specifications in advance.

  When the resin absorbs moisture, the resistance to moisture and corrosion of the resistor may deteriorate, so be aware.
- When the resistor is coated, potted or molded by resin materials, the curing stress could cause peeling of protective coating and cracking of solder fillet, resulting in resistance change and disconnection. Do not coat nor seal the flame retardant coated resistors.
- Allow enough time for cooling after mounting metal film resistors, before washing off the flux. Residues of ionic substances may deteriorate resistances to moisture and corrosion.
- Cylindrical film resistors have inductance due to the spiral trimming.

  Please be aware when using in a high-frequency circuit.
- The flame retardant resistors are weak against mechanical stress compared with the general resistors due to the special coating. Please do not apply impact, vibration or pinching with pliers, tweezers to the resistor body. Do not apply any external force to the protective coating until drying is fully completed after washing.

Wirewound Type Resistors

- Wirewound type resistors have inductances and parasitic capacitances resulting from the winding structure. Therefore, they could resonate when used in a high frequency circuit.

Fusing Resistors

- Confirm beforehand that the overload condition of the abnormal situations are within the fusing characteristics.
- Contact KOA in advance when excess overload above the rated voltage is continuously applied, since there is a possibility of damage accumulated in the resistor.
- The arc phenomenon may occur when high voltage is applied again after fusing by over current. Make sure to use the product below the maximum open circuit voltage.
- Contact KOA about the maximum open circuit voltage, it varies depending on the product type and resistance.
- The fusing characteristics could change when the resistors are coated, potted and molded by resin materials.

Reference

- For the basic precautions of using resistors, refer to the technical report, "JEITA RCR-2121A Safety application guide for fixed resistors for use in electronic equipment", issued by JEITA.

Terms and Definitions

Nominal Resistance
- Designed resistance value usually indicated on the resistor.

Power Rating
- Maximum allowable power at rated temperature. Some of our chip resistor arrays and networks specify the power rating for the entire package, as opposed to each element.

Rated Ambient Temperature
- Maximum ambient temperature at which the power rating may be applied continuously. The rated ambient temperature refers to the temperature around the resistor mounted inside the equipment, not to the air temperature outside the equipment.

Rated Terminal Part Temperature
- Maximum terminal part temperature of the surface mount resistor at which the power rating may be applied continuously. Includes the temperature rise by self heat generation.

Derating Curve
- Curve that expresses the relation between ambient temperature or terminal part temperature and the maximum allowable power, which is generally expressed in percentage.

Rated Voltage
- Maximum allowable D.C. or A.C. voltage, to be continuously applied to a resistor or a resistor element.

  Rated Voltage (V) = $\sqrt{\text{Rated Power (W) X Nominal Resistance Value (}\Omega\text{)}}$
  Rated voltage shall be the calculated value or max. working voltage, whichever is lower.

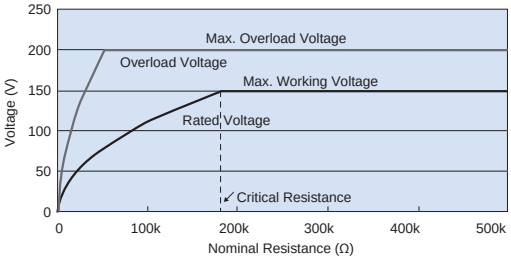
Critical Resistance
- The maximum nominal resistance value at which the rated power can be applied without exceeding the maximum working voltage. The rated voltage is equal to the max. working voltage at the critical resistance value.

Max. Working Voltage
- Maximum D.C. or A.C. voltage (rms) that can be continuously applied to the terminations of a resistor. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.

  Maximum working voltage and rated voltage are calculated D.C. voltage based on rated power. Sine wave is assumed for the A.C. voltage so the peak voltage should be $\sqrt{2}$ times the maximum working voltage. When the wave form is not a sine wave, or when the resistance value exceeds the critical resistance, please contact us for the applicable peak voltage.

Overload Voltage
- Allowable voltage which is applied for 5 sec. according to the short time overload test. Overload voltage shall be 2.5 times of rated voltage or max. overload voltage, whichever is lower.

Maximum Overload Voltage
- Largest value of overload voltage



Example of Various Voltage of RK73G 2A

Dielectric Withstanding Voltage
- A.C. voltage (rms) that can be applied to a designated spot between the electrode and the outer coating for one minute according to the proof test.

Temperature Coefficient of Resistance (T.C.R.)
- Relative variation of resistance between two given temperatures when temperature is changed by 1K, which is calculated by the following formula.

$$\text{T.C.R. } (\times 10^{-6}/\text{K}) = \frac{R-R_0}{R_0} \times \frac{1 \times 10^6}{T-T_0}$$

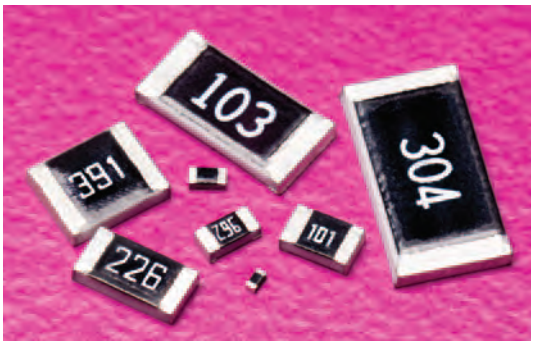
R : Resistance value (Ω) at T
R_0 : Resistance value (Ω) at T_0
T : Measured test temperature (°C)
T_0 : Measured base temperature (°C)

KOA SPEER ELECTRONICS, INC.

RK73B

general purpose 2%, 5% tolerance thick film chip resistor

EU RoHS COMPLIANT



features

- Wide lineup from 01005 to 2512 size
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested: 0201 (1H), 0402 (1E), 0603 (1J), 0805 (2A), 1206 (2B), 1210 (2E), 2010 (2H/W2H), 2512 (3A/W3A/W3A2)

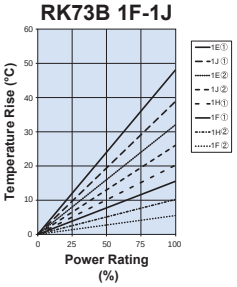
Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

If any questions arise on whether to use the "Rated Ambient Temperaute" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details, refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of our catalog. Temperature rise at high power will depend on PCB layout. Be sure to contact factory prior to use and monitor terminal part temperature.

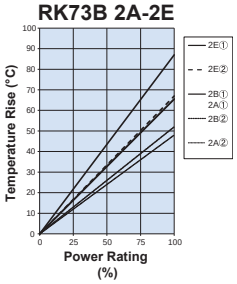
environmental applications

Temperature Rise

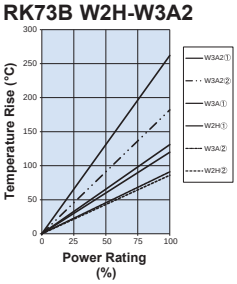
RK73B 1F-1J



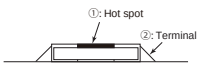
RK73B 2A-2E



RK73B W2H-W3A2



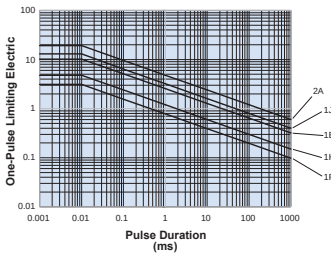
Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35μm



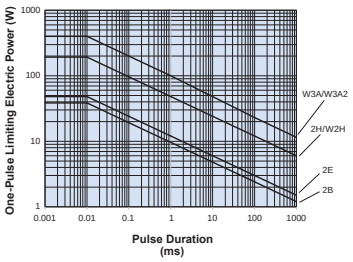
Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

RK73B 1F-2A



RK73B 2B-W3A2



The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

precision 0.5%, 1% tolerance thick film chip resistor

features

- Wide lineup from 01005 to 2512 size
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested: 0201 (1H), 0402 (1E), 0603 (1J), 0805 (2A), 1206 (2B), 1210 (2E), 2010 (2H/W2H), 2512 (3A/W3A/W3A2)

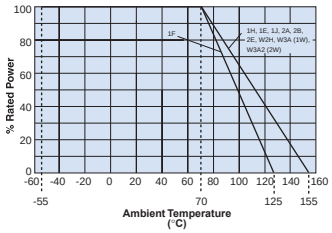
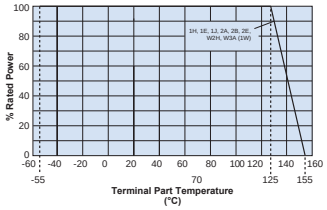
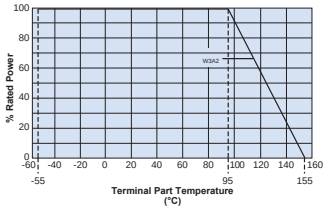
Derating Curve







For resistors operated at an ambient temperature of 70°C or higher, the power shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use

*Parentheses indicate EIA package size codes.

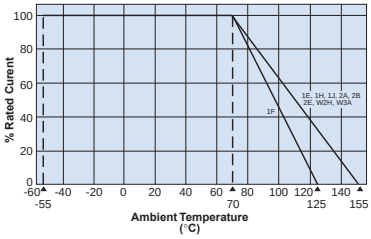
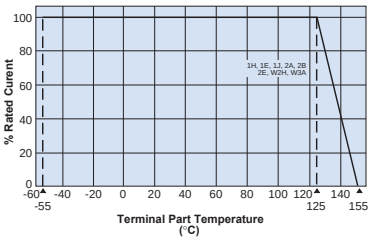
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a current rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

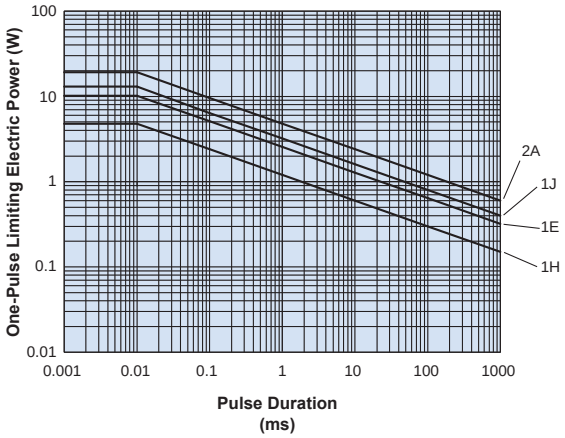
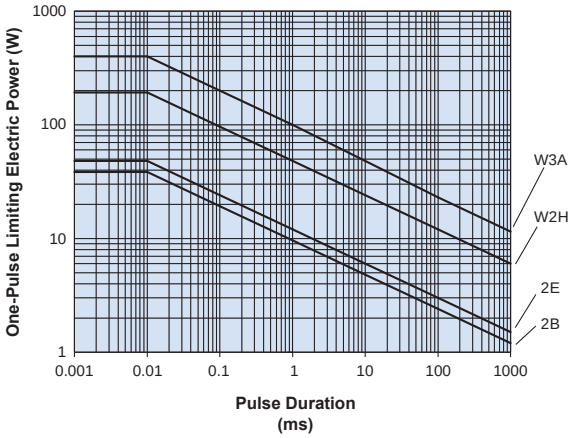
environmental applications

One-Pulse Limiting Electric Power

RK73Z 1H-2A



RK73Z 2B-W3A



Please ask us about the resistance characteristic of continuous applied pulse.
Please calculate One-Pulse Limiting Electric Power using upper limit of resistance (50mΩ or 100mΩ) for applied current.
The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement		Test Method
	Limit	Typical	
Resistance	50mΩ Max. after the test	15mΩ Max. after the test	25°C
Overload (Short time)	50mΩ Max. after the test	18mΩ Max. after the test	Maximum overload current for 5 seconds , 1 cycle
Resistance to Solder Heat	50mΩ Max. after the test	15mΩ Max. after the test	260°C ± 5°C, 10 seconds ± 1 second
Rapid Change of Temperature	50mΩ Max. after the test	15mΩ Max. after the test	Characteristic (Nil) Standard: -55°C (30 minutes), +125°C (30 minutes), 100 cycles Characteristic (A) Heat Shock Resistance: -55°C (30 minutes), +125°C (30 minutes), 1000 cycles
Moisture Resistance	100mΩ Max. after the test	18mΩ Max. after the test	40°C ± 2°C, 90%-95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	100mΩ Max. after the test	18mΩ Max. after the test	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	100mΩ Max. after the test	15mΩ Max. after the test	+125°C, 1000 hours: 1F +155°C, 1000 hours: 1H, 1E, 1J, 2A, 2B, 2E, W2H/2H, W3A/3A

KOA SPEER ELECTRONICS, INC.

RK73G

thick film 0.25%, 0.5%, 1% tolerance, 50ppm/°C chip resistor

EU RoHS COMPLIANT

features

- Metal-glaze thick film resistor for surface mounting
- High precision resistor with T.C.R. of ±50 ppm/°C and tolerance of ±0.25%, ±0.5% or ±1%
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

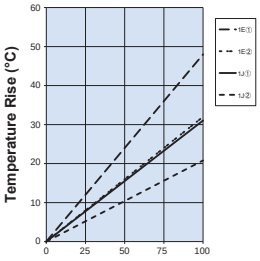
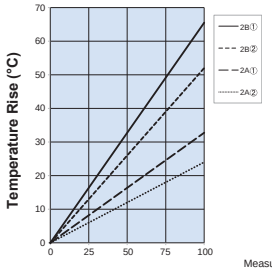
environmental applications

Temperature Rise

RK73G 1E-1J



RK73G 2A-2B

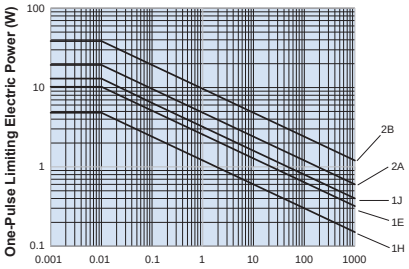


Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35µm

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

RK73G 1H-2B



The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.1Ω) Limit	Typical	Test Method

RN73H

long term precision thin (metal) film flat chip resistors (high reliability, for automotive)

EU RoHS COMPLIANT

features

- High reliability with ΔR of ±0.1% in the long-term reliability test
- Endurance at 85°C (3,000h): ΔR of ±0.1% in Standard Mode
- Operating temperature range ~155°C
- Rated ambient temperature: 85°C
- High precision type ±0.05% is available
- Low current noise
- High reliability and high stability at elevated temperatures
- Improved moisture resistance by glass passivation layer
- Sulfur resistance verified according to ASTM B 809-95
- Products meet EU RoHS requirements
- AEC-Q200 Tested

High Temperature Exposure	±0.1%**	±0.05%	+155°C, 1000 hours

Precautions for Use

** Depends on resistance value, please contact KOA Speer for details.

- The properly and electrostatically measured taping materials are used for the components, but attention should be paid to the fact that there is some danger the parts absorb on the top tapes to cause a failure in the mounting and the parts are destructed by static electricity (1J, 2A, 2B, 2E: 1kV and more, 1E: 0.5kV and more at Human Body Model 100pF, 1.5kΩ) to change the resistance in the conditions of an excessive dryness or after the parts are given vibration for a long time as they are packaged on the tapes. Similarly, care should be given not to apply the excessive static electricity when mounting on the boards.
- Ionic impurities such as flux etc. that are attached to these products or those mounted onto a PCB, negatively affect their moisture resistance, corrosion resistance, etc. The flux may contain ionic substances like chlorine, acid, etc. while perspiration and saliva include ionic impurities like sodium (Na^+), chlorine (Cl^-) etc. Therefore these kinds of ionic substances may induce electrical corrosion when they invade into the products. Either thorough washing or using RMA solder and flux are necessary since lead free solder contains ionic substances. Washing process is needed, before putting on moisture proof material in order to prevent electrical corrosion.
- The upper electrodes could be peeled off when a heat-resistant masking tape is attached to the mounted chip resistors and then detached from them. It is confirmed that the adhesiveness gets stronger due to the exposure to heat under mounting. Accordingly, we recommend the use of masking tape be refrained. If the use of heat-resistant masking tape is unavoidable, please make sure that the adhesives on the tape do not directly come in contact with the product.
- When high-pressure shower cleaning is implemented, there is a possibility of exfoliation of the top electrodes caused by the water pressure stress so please avoid the implementation.
- If the implementation is unavoidable, then please evaluate the products beforehand.

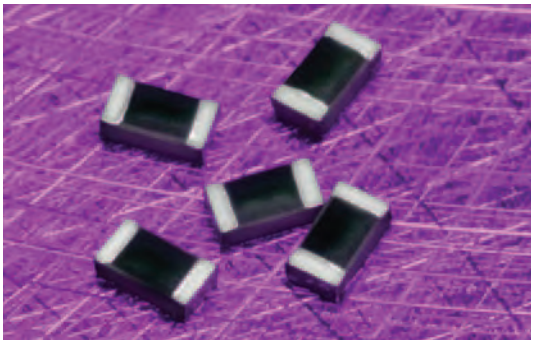
KOA SPEER ELECTRONICS, INC.

RN73R

precision thin (metal) film flat chip resistors (high reliability)



features

- High reliability with ΔR of ±0.1%～±0.25% in the long-term reliability test
- Endurance at 85°C (1,000h): ΔR of ±0.1% in Standard Mode
- Operating temperature range ~ 155°C
- Rated ambient temperature: 85°C
- High precision type ±0.05% is also available
- Low current noise
- Improved moisture resistance by high humidity protective coating
- Suitable for control circuits in various industrial equipment
- Sulfur resistance verified according to ASTM B 809-95
- Products meet EU RoHS requirements
- AEC-Q200 Tested

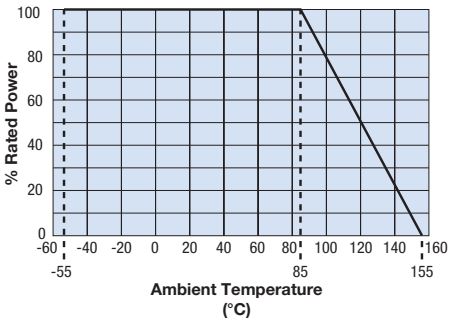
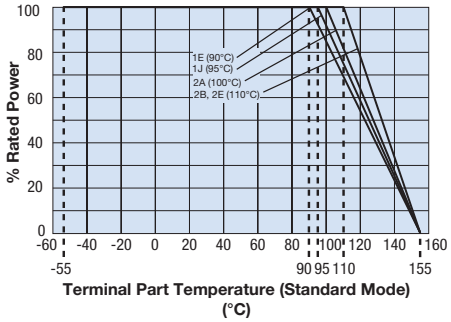
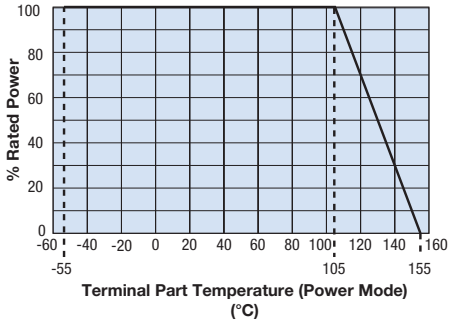
Derating Curve







For resistors operated at an ambient temperature of 85°C or above, a power rating shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve. Please refer to"Introduction of the derating curves based on the terminal part temperature"on the beginning of our catalog before use.

Precautions for Use

- The properly and electrostatically measured taping materials are used for the components, but attention should be paid to the fact that there is some danger the parts absorb on the top tapes to cause a failure in the mounting and the parts are destructed by static electricity (1J, 2A, 2B, 2E: 1kV and more, 1E: 0.5kV and more at Human Body Model 100pF, 1.5kΩ) to change the resistance in the conditions of an excessive dryness or after the parts are given vibration for a long time as they are packaged on the tapes. Similarly, care should be given not to apply the excessive static electricity when mounting on the boards.
- Ionic impurities such as flux etc. that are attached to these products or those mounted onto a PCB, negatively affect their moisture resistance, corrosion resistance, etc. The flux may contain ionic substances like chlorine, acid, etc. while perspiration and saliva include ionic impurities like sodium (Na^+), chlorine (Cl^-) etc. Therefore these kinds of ionic substances may induce electrical corrosion when they invade into the products. Either thorough washing or using RMA solder and flux are necessary since lead free solder contains ionic substances. Washing process is needed, before putting on moisture proof material in order to prevent electrical corrosion.
- The upper electrodes could be peeled off when a heat-resistant masking tape is attached to the mounted chip resistors and then detached from them. It is confirmed that the adhesiveness gets stronger due to the exposure to heat under mounting. Accordingly, we recommend the use of masking tape be refrained. If the use of heat-resistant masking tape is unavoidable, please make sure that the adhesives on the tape do not directly come in contact with the product.
- When high-pressure shower cleaning is implemented, there is a possibility of exfoliation of the top electrodes caused by the water pressure stress so please avoid the implementation.
- If the implementation is unavoidable, then please evaluate the products beforehand.

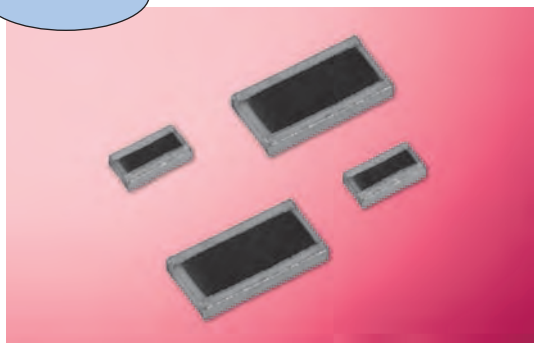
KOA SPEER ELECTRONICS, INC.

WN73H

wide terminal thin (metal) film flat chip resistors (high reliability)

NEW



EU RoHS COMPLIANT

features

- SMD metal film resistors of wide terminal type
- High precision type ±0.1% is also available as standard
- High performance T.C.R. ±10 ppm/°C is also available as standard
- Low current noise
- Operating temperature range ~155°C
  Rated ambient temperature: 85°C
- High reliability with ΔR of ±0.1% in the long-term reliability test
- Endurance at 85°C (1,000h): ΔR of ±0.1%
- Improved moisture resistance by special protective coating
- High precision resistor solution for tough environments, especially in high reliable automotive, medical and industrial applications
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements
- AEC-Q200 Tested
- Sulfur resistance verified according to ASTM B 809-95

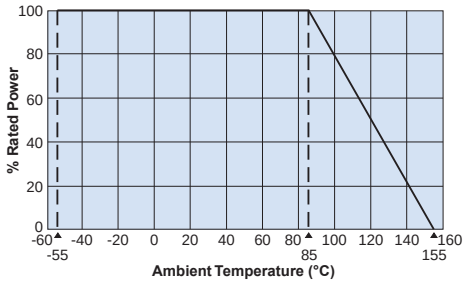
Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

If any questions arise whether to use the “Rated Ambient Temperature” or the “Rated Terminal Part Temperature” in your usage conditions, please give priority to the “Rated Terminal Part Temperature.”

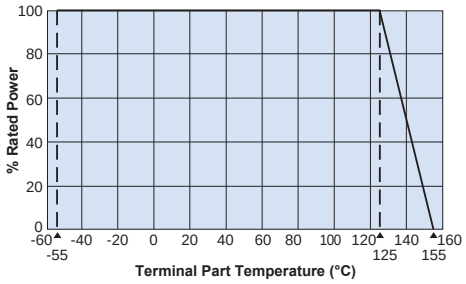
Prior to use and for more details, please refer to the “Introduction of the derating curves based on the terminal part temperature” in the beginning of our catalog.

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 85°C or above, a power rating shall be derated in accordance with the above derating curve.



When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

Please refer to “Introduction of the derating curves based on the terminal part temperature” on the beginning of our catalog before use.

Performance Characteristics

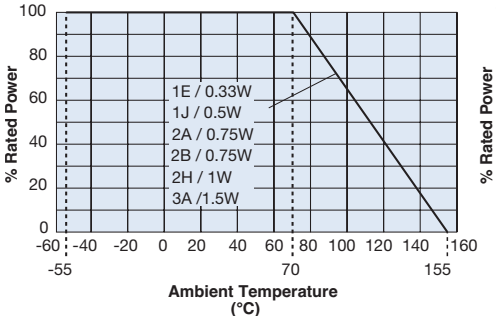
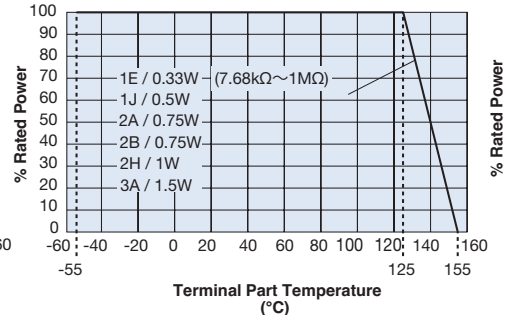
Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

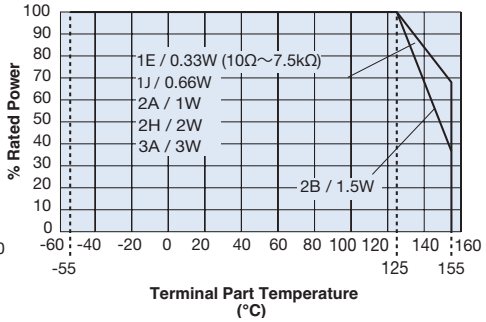
[1] If you want to use at rated power use derating curves based on the terminal part temperature on the right side graph located below. If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature", please give priority to the "Rated Terminal Part Temperature." For more details refer to the "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve







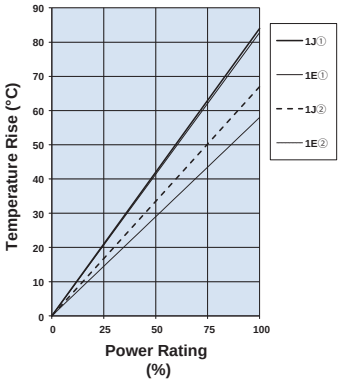
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

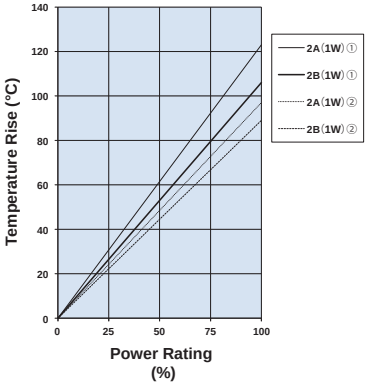
Please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog before use.

Temperature Rise

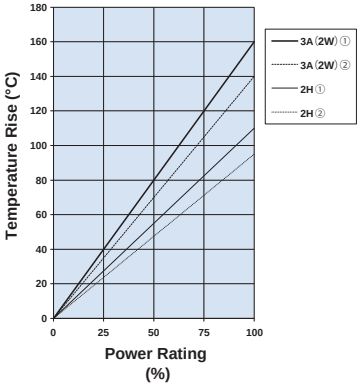
WK73R 1E-1J



WK73R 2A-2B

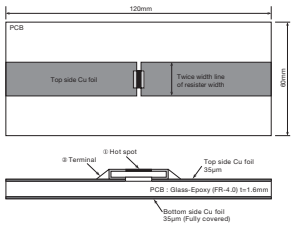


WK73R 2H-3A



Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

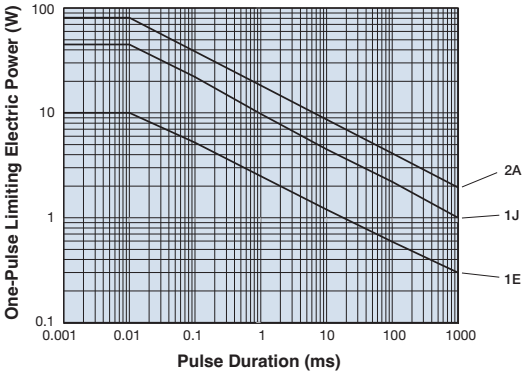
Simulated and Measurement Conditions



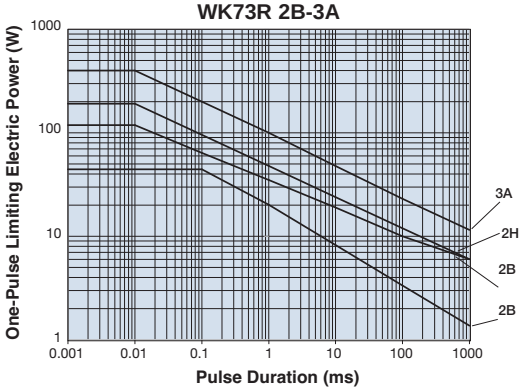
Temperature rise is simulated and measured under our conditions. So, the values will vary depending on the operating conditions and PCB used.

One-Pulse Limiting Electric Power

WK73R 1E-2A



WK73R 2B-3A



The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Derating Curve

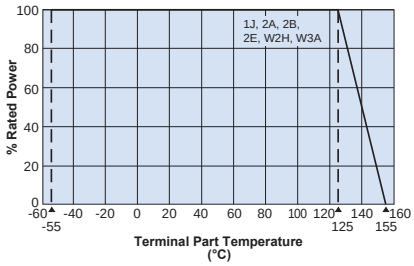
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

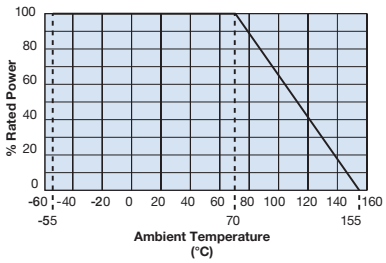
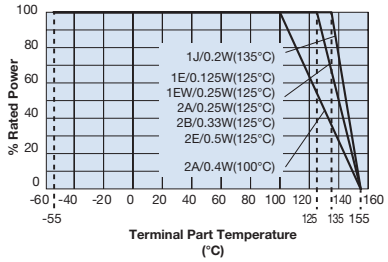
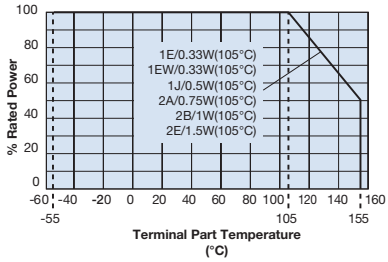
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.





When the terminal part temperature of the resistor exceeds the rated terminal part temperature in the Applications and Ratings chart, the power shall be derated according to the derating curves on the left. If you want to use the rated power of *1, *2, please use the derating curve based on the terminal part temperature in the center graph.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

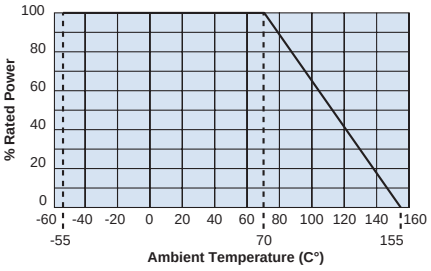
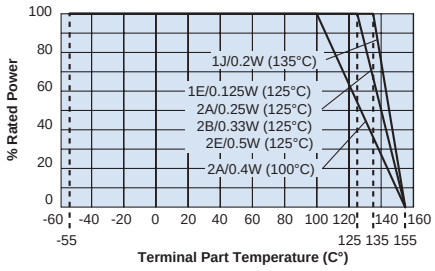
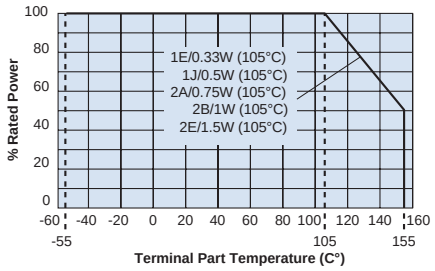
Derating Curve







For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

If you want to use the rated power of *2, please use the derating curve based on the terminal part temperature above.

Additional environmental applications can also be found at www.koaspeer.com

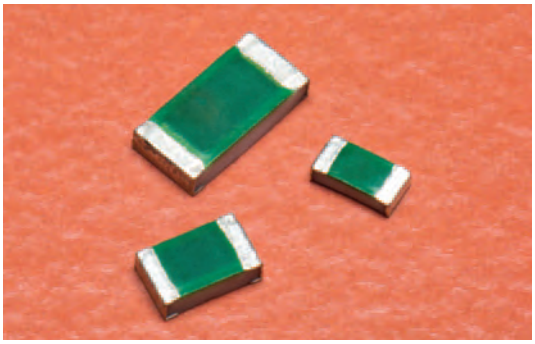
SG73G

endured pulse power flat chip resistors (ultra precision grade)

EU RoHS COMPLIANT



features

- Superior to RK73 series chip resistors in pulse withstanding voltage and high power
- High Precision resistor with T.C.R. ±50×10^{-6}/K and Tolerance ±0.25%
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

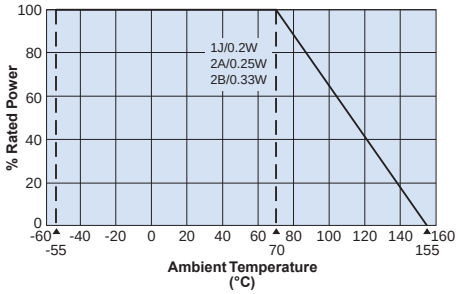
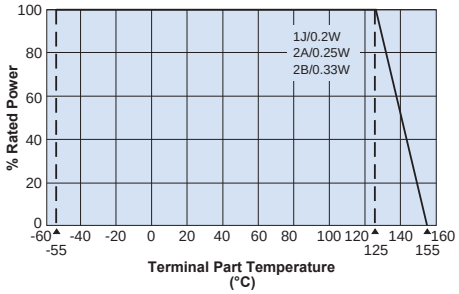
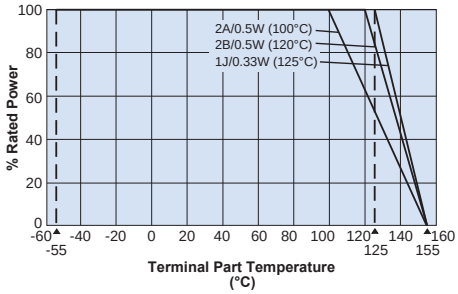
Derating Curve







For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve. Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use. *1 If you want to use the rated power of *1, please use the derating curve based on the terminal part temperature on the right hand side.

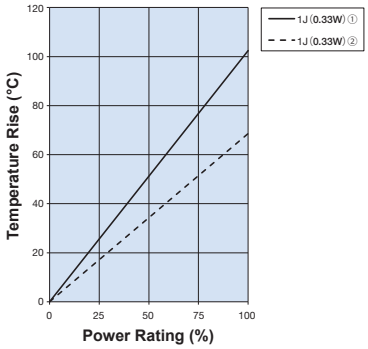
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog. *1 If you want to use the rated power of *1, please use the derating curve based on the terminal part temperature on the previous page.

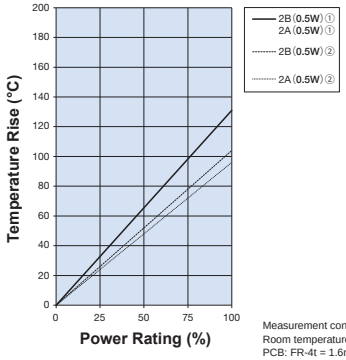
environmental applications

Temperature Rise

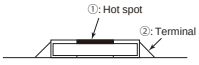
SG73G 1J



SG73G 2A-2B



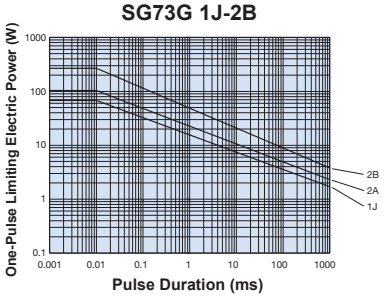
Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35μm



Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

SG73G 1J-2B



The maximum applicable voltage is equal to the max. overload voltage.

Please ask us about the resistance characteristic of continuous applied pulse.

The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.1Ω) Limit	Typical	Test Method

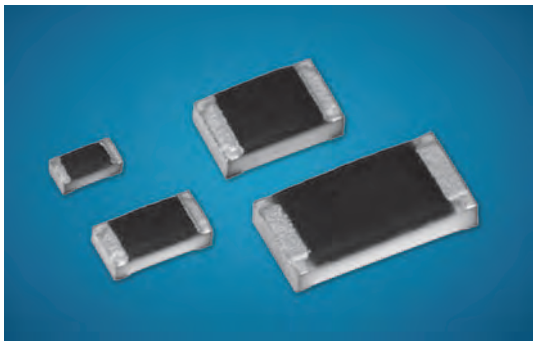
HSG73P

high temperature flat chip resistors



features

- High heat resistance that can be used even at high temperatures of 155°C or higher. The maximum operating temperature of Sn plating products compatible with solder mounting is 175°C, and Au plating products compatible with conductive glue mounting is 200°C.
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- High stability and high reliability with the triple-layer structure of electrode
- Superior to RK73 series chip resistors pulse withstanding voltage and high power
- Applicable to various kinds of automatic mounters for taping, etc
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

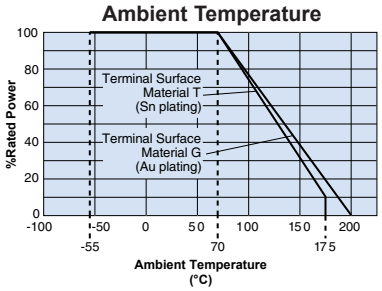
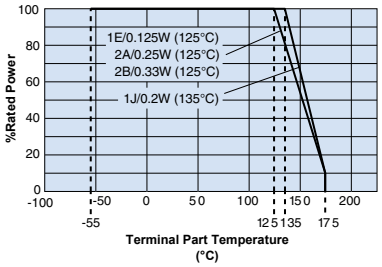
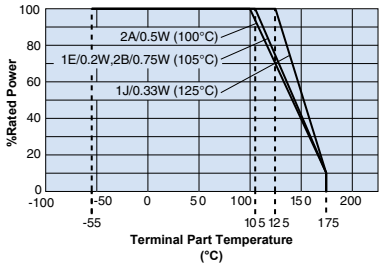
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.





When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.
If you want to use at the rated power of *1, please use the derating curves based on the terminal part temperature of right side.
Please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of our catalog before use.

Operating Temperature Range :-55°C ~ +175°C (Terminal Surface Material: T), -55°C ~ +200°C (Terminal Surface Material: G)

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

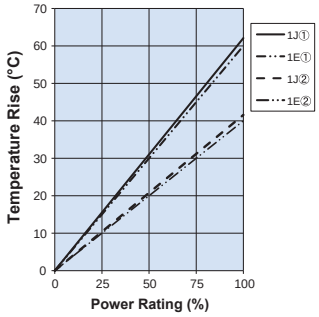
*1 If you use at the rated power, please keep the condition that the terminal of the resistor is below the rated terminal part temperature.

Please refer to the derating curves based on the terminal temperature.
If any questions arise whether to use the "Rated Ambient Temperature"or the"Rated Terminal Part Temperature"in your usage conditions, please give priority to the"Rated Terminal Part Temperature"

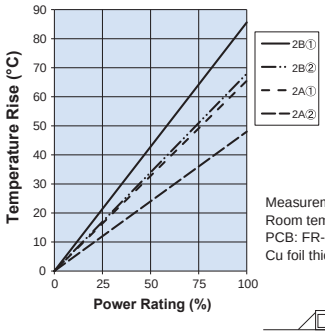
environmental applications

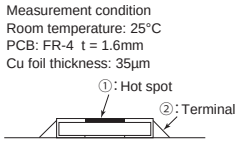
Temperature Rise

HSG73P 1E-1J



HSG73P 2A-2B

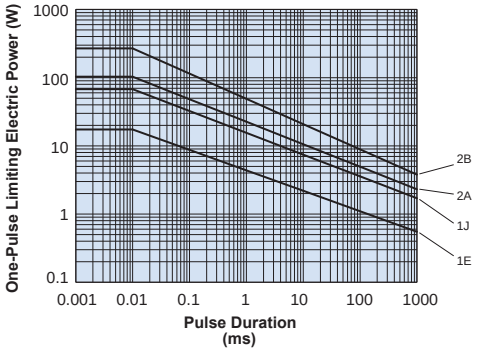




Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

HSG73P 1E-2B



The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse.

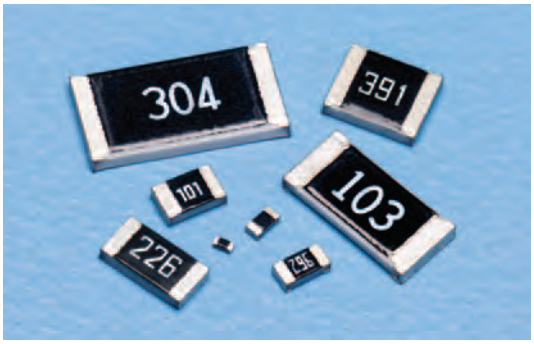
For Surface Temperature Rise Graph see Environmental Applications. Additional environmental applications can also be found at www.koaspeer.com

11/09/22



features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- High stability and high reliability with the triple-layer structure of electrode
- Suitable for both flow and reflow
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested: 0201 (1H), 0402 (1E), 0603 (1J), 0805 (2A), 1206 (2B), 1210 (2E), 2010 (W2H), 2512 (W3A)

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

[1]The nominal resistance value for RK73H1F (F:±1%) is E24

[2] If you use at the rated power, please keep the condition that the terminal of the resistor is below the rated terminal part temperature. Please refer to the derating curves based on the terminal temperature.

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," in your usage conditions, please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves in the terminal part temperature" in the beginning of the catalog.
While using under high power, the temperature of the product may increase depending on the condition of heat dissipation from PCB.
Be sure to check the terminal part temperature as well as precautions to use on delivery specification before use.

KOA SPEER ELECTRONICS, INC.

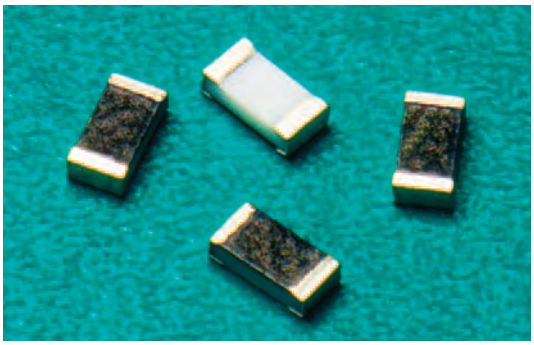
RS73-RT

high reliability chip resistors (anti-sulfuration)



features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- Metal-glaze thick film resistor for surface mounting
- High precision resistor with T.C.R. down to 25 ppm and tolerance as tight as ±0.1%
- High reliability with ΔR of ±0.2% and ±0.5% in the reliability test
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

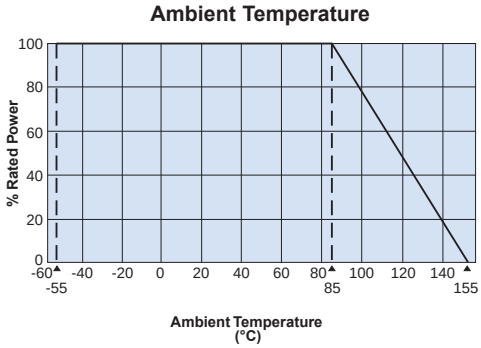
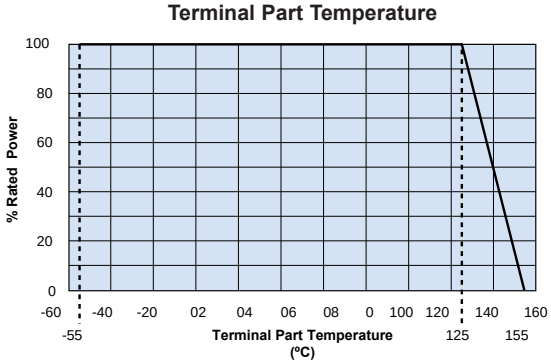
Derating Curve

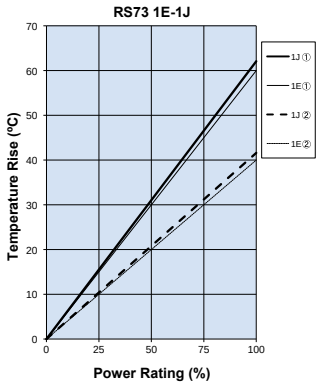


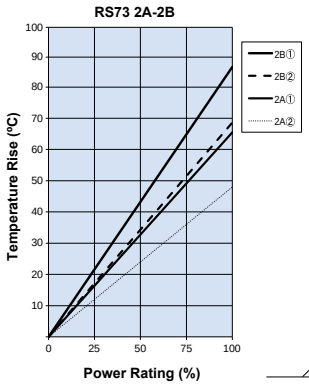
For resistors operated at an ambient temperature of 85°C or above, a power rating shall be derated in accordance with the derating curve.



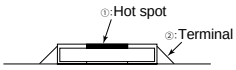
For resistors operated terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve. Please refer to “Introduction of the derating curve based on the terminal part temperature” in the beginning of our catalog before use.

Temperature Rise



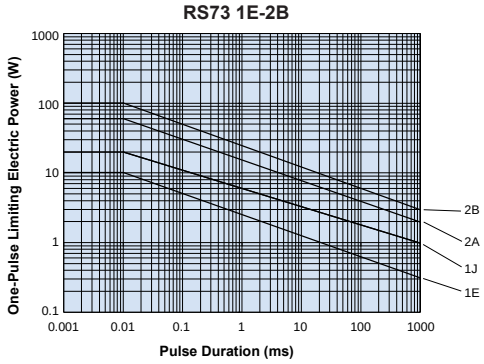


Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.



Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35µm

One-Pulse Limiting Electric Power



The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

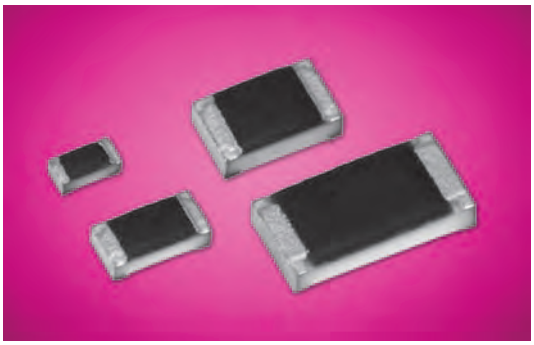
HSG73P-RT

high temperature flat chip resistors (anti-sulfuration)

EU RoHS COMPLIANT



features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- High heat resistance that can be used even at high temperatures of 155°C or higher. The maximum operating temperature of Sn plating products compatible with solder mounting is 175°C.
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- High stability and high reliability with the triple-layer structure of electrode
- Superior to RK73 series chip resistors pulse withstanding voltage and high power
- Applicable to various kinds of automatic mounters for taping, etc
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

EU RoHS COMPLIANT

features

- Anti-sulfuration type, wide-side termination (reverse-geometry) type flat chip resistor
- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements.
  EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

If any questions arise whether to use the"Rated Ambient Temperature"or the"Rated Terminal Part Temperature"in your usage conditions, please give priority to the"Rated Terminal Part Temperature".

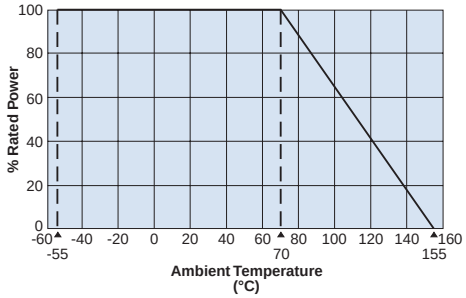
Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

*[1] If you use at the rated power, please keep the condition that the terminal of the resistor is below the rated terminal part temperature. Please refer to the derating curves based on the terminal temperature of right side on the next page.

For more details, please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog.

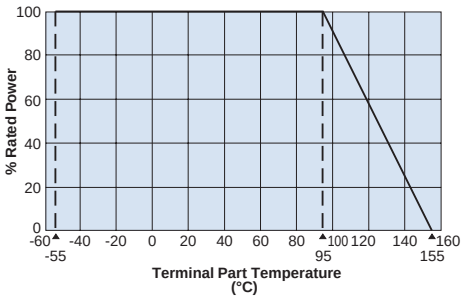
Derating Curve

Ambient Temperature



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Terminal Part Temperature

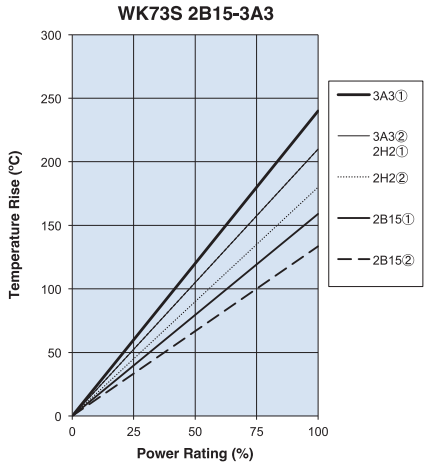


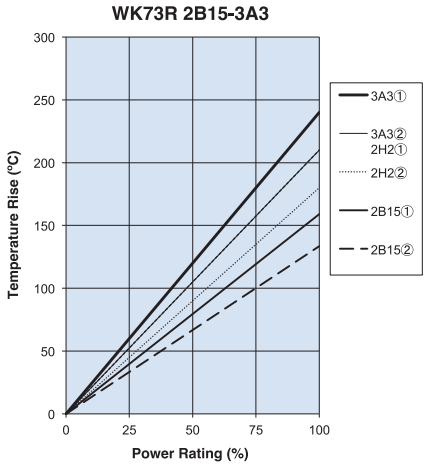
For resistors operated terminal temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

If you want to use at rated power[1], use derating curves based on the terminal part temperature above.

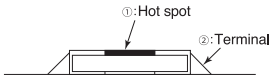
Temperature Rise



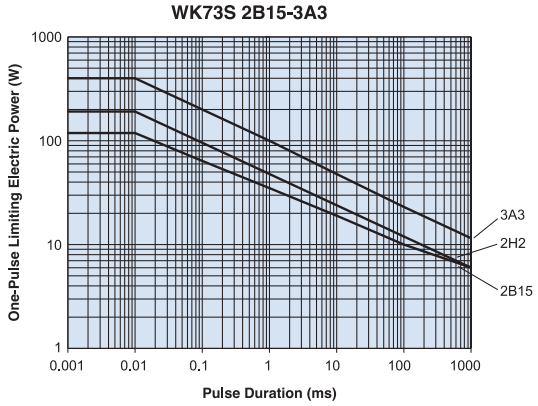


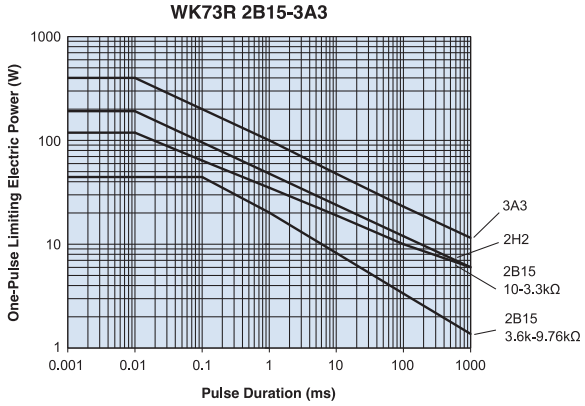
Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35µm



One-Pulse Limiting Electric Power





The maximum applicable voltage is equal to the max. overload voltage.
Please ask us about the resistance characteristic of continuous applied pulse.
The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

environmental applications

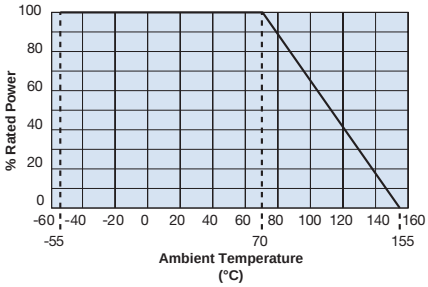
*1 Cold T.C.R. (-55°C ~ +25°C) is ±150x10^{-6}/K. *2 Applies when power rating is 0.4W or lower.

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower.

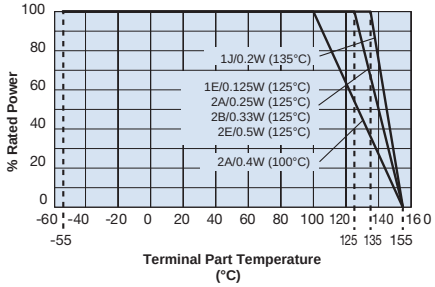
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog. Also, contact KOA prior to usage and for the max. working voltage and max. overload voltage.

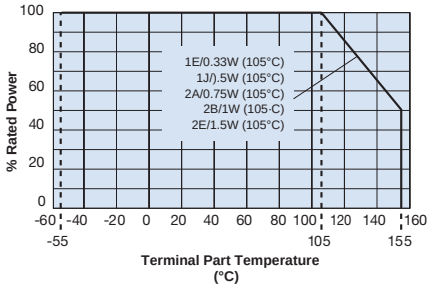
environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.



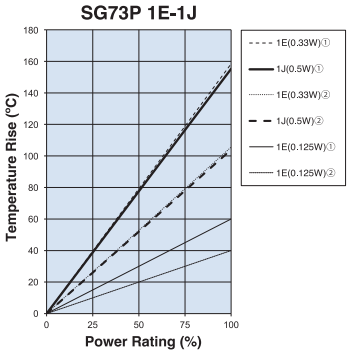


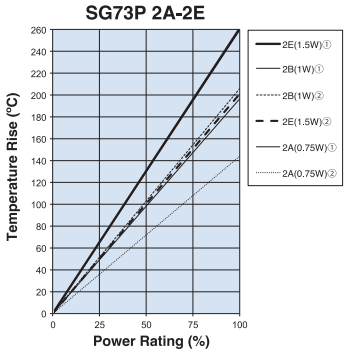
For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

If you want to use the rated power of *2 please use the derating curve based on the terminal part temperature above.

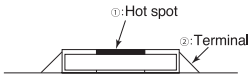
Temperature Rise



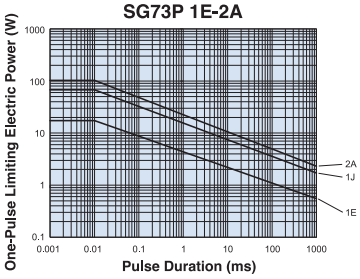


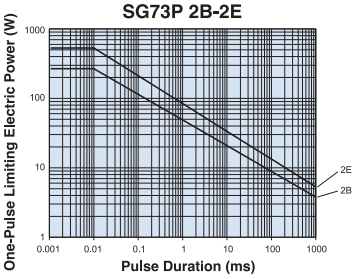
Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4 t = 1.6mm
Cu foil thickness: 35µm



One-Pulse Limiting Electric Power





The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

*1 Cold T.C.R. (-55°C ~ +25°C) is ±150x10^{-6}/K

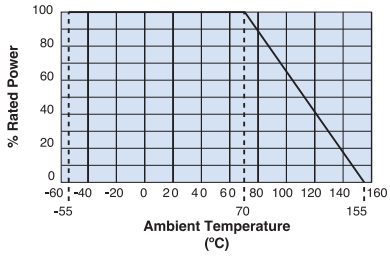
*2 Applies when power rating is 0.4W or lower.

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

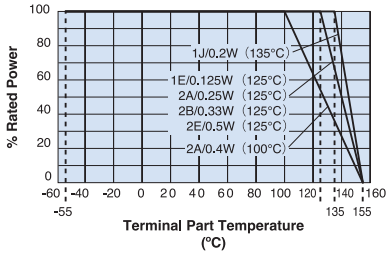
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

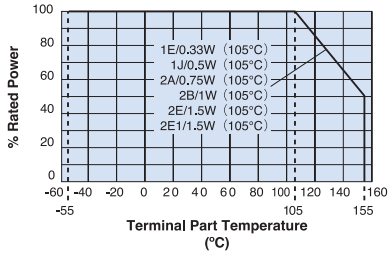
environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.





For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.
Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.
If you want to use the rated power of *2, please use the derating curve based on the terminal part temperature above.

Additional environmental applications can also be found at www.koaspeer.com

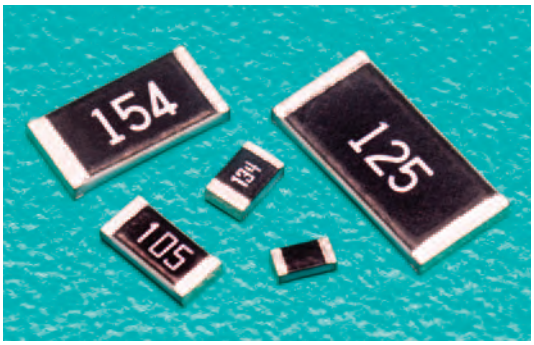
HV73-RT

flat chip resistors for high voltage (anti-sulfuration)

EU RoHS COMPLIANT



features

- Superior to RK73 series in maximum working voltage
- Suitable for flow and reflow solderings
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- Excellent anti-sulfuration characteristics due to using high sulfuration-proof inner top electrode material

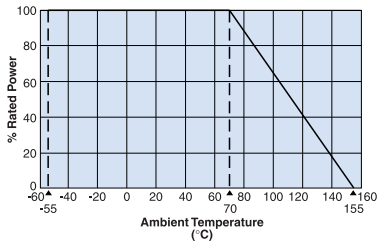
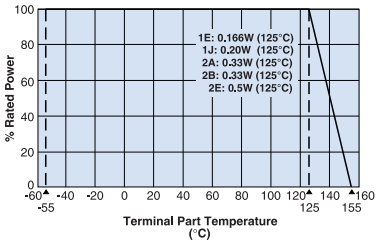
Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

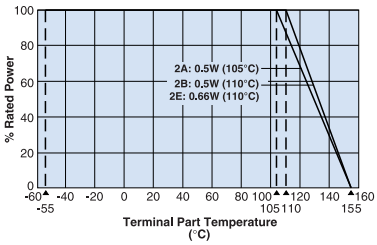
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

SR73 2A (0.5W), SR73 2B (0.5W), SR73 2E (0.66W)

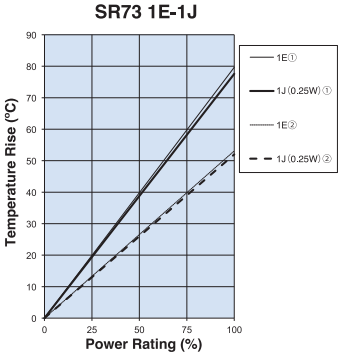


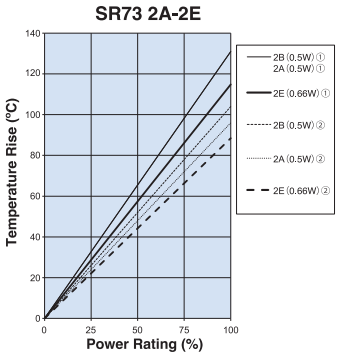


For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

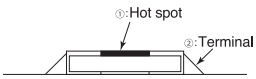
Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

Temperature Rise



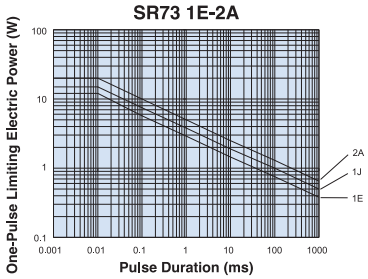


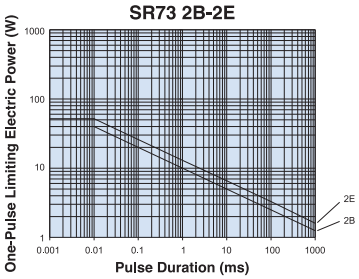
Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.



Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35μm

One-Pulse Limiting Electric Power





Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

environmental applications

Performance Characteristics

Parameter	Requirement ΔR ±(%+0.005Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/-55°C and +25°C/+125°C

Resistance to Solder Heat	±1%	±0.3%	260°C ± 5°C, 10 seconds ± 1 second
Rapid Change of Temperature	±1%	±0.3%	-55°C (30 minutes) / +125°C (30 minutes), 100 cycles
Moisture Resistance	±2%	±1%	40°C ± 2°C, 90%-95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±2%	±1%	70°C ± 2°C or rated terminal part temperature ± 2°C 1000 hours 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±1%	±0.3%	+155°C, 1000 hours
Sulfuration Test	±5%	±0.2%	Soaked in industrial oil with sulfur substance 3.5% contained, 105°C ±3°C, 500 hours

Please refer to conventional products for characteristic data such as temperature rise.

KOA SPEER ELECTRONICS, INC.

SLR1

mold type resistors

EU RoHS COMPLIANT

features

- Thick film resistor protected by liquid crystal polymer resin
- Excellent heat cycle characteristics
- Encapsulated with flame retardant resin molding. (UL94 V-0)
- High operating temperature range up to 180°C
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

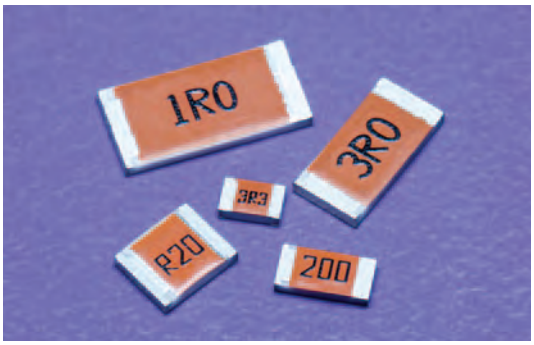
Resistance to Solvent	No abnormaly in appearance such as disappearance of making, etc.	—	On immersing the sample in IPA for 3 minutes, the resistor surface should be lightly wiped with a dry cloth (velvet or gauze)
High Temperature Exposure	±2%	±0.3%	+155°C, 1000 hours

KOA SPEER ELECTRONICS, INC.

RF73

fusing flat chip resistor

EU RoHS COMPLIANT



features

- In normal condition, it works as a resistor and when excessive voltage is applied, it protects circuits by fusing quickly
- The same shape as RK73 series
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- Recognized by safety standard UL1412. (0603 (1J) is not recognized)

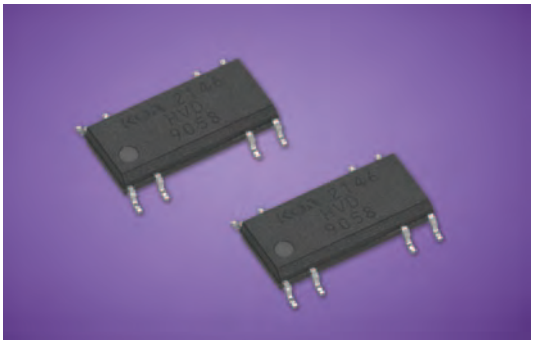
HVDP08

thin film network resistors for high voltage divider

EU RoHS COMPLIANT



features

- High precision high voltage divider
- Maximum resistance value 51MΩ, maximum working voltage 1000V, maximum resistance ratio 1000:1
- Relative precision of pair resistors are guaranteed
- Higher integration saves board space and overall assembly costs
- Excellent reliability with standard molded IC package
- Suitable for reflow soldering
- Products meet EU RoHS requirements
- AEC-Q200 tested

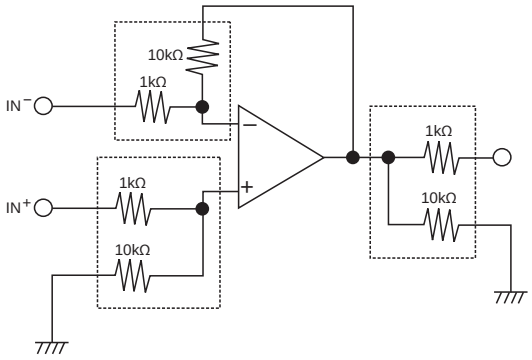
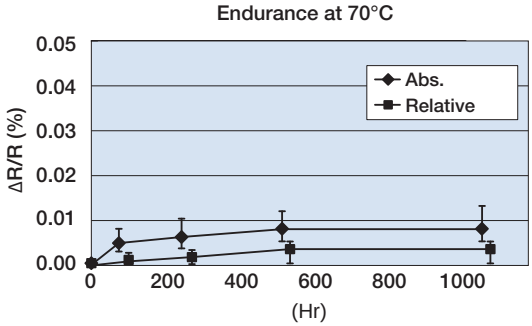
example of application



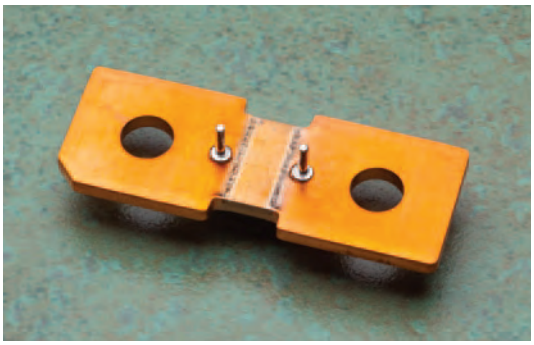
typical characteristics

Endurance at 70°C (Typical: 1kΩ, 8 resistors/package)



merit of thin film resistor networks

Metal thin film resistors formed by sputtering method have very similar characteristic among pair resistors. When their characteristic of T.C.R., aging, etc. for relative precision is requested, it's very suitable to apply thin film resistor networks to utilize the characteristic as above.



features

- Ultra low resistance, suitable for large current sensing
- Excellent T.C.R. achieved (50±25 x 10^{-6}/K)
- Correct electric current detection by a voltage pin is possible
- Bus bar and cable can be screwed on
- 2D code means individual resistance information
- Products meet EU RoHS requirements
- AEC-Q200 Tested

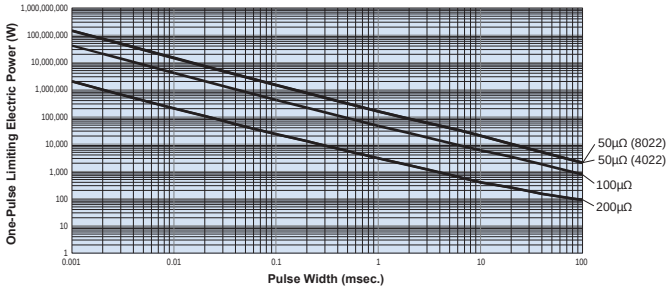
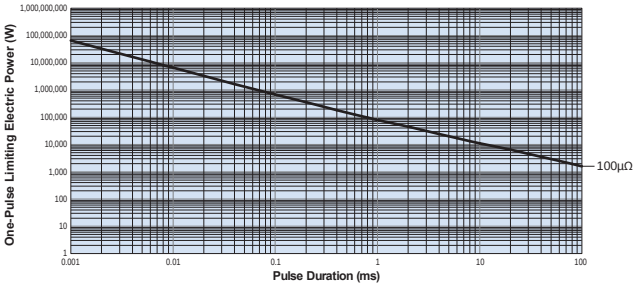
environmental applications

One-Pulse Limiting Electric Power

HSA



HSB

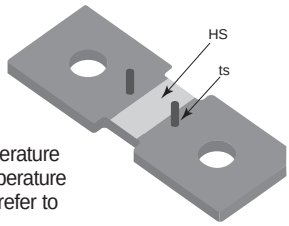


Please ask us about the resistance characteristic of continuous applied pulse.
The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

Thermal Resistance

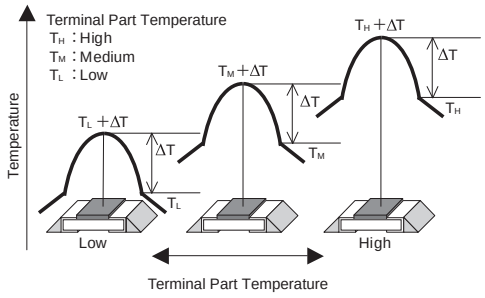
Resistance (Ω)	Rth (°C/W)
50μ	0.57
100μ	1.2
200μ	2.3

Rth=(Hs-ts)/Power



Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.

The temperature of the resistor will increase the same ⊿T from the standard terminal part temperature regardlless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.



Performance Characteristics

Parameter	Requirement Δ R % Limit	Typical	Test Method

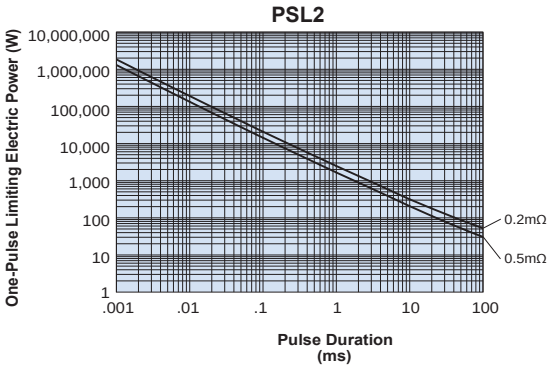
applications and ratings

Part Designation	Power Rating (Current Rating)	T.C.R. (ppm/°C) Max.	Resistance Range	Resistance Tolerance	Rated Terminal Part Temperature	Operating Temperature Range
PSL2	9W (212A)	250±100	0.2mΩ	F: ±1%	75°C	-65°C to +175°C
	8W (163A)	±175	0.3mΩ			
	8W (126A)	±115	0.5mΩ			

environmental applications

One-Pulse Limiting Electric Power



Please ask us about the resistance characteristic of continuous applied pulse.

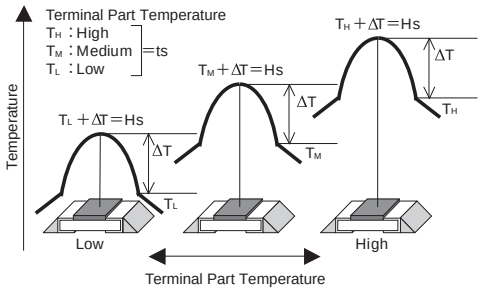
The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

Thermal Resistance

Type	Resistance (Ω)	Rth (°C/W)
PSL2	0.2m	3.2
	0.5m	6.7

Rth=(Hs-ts)/Power

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.



The temperature of the resistor will increase the same ⊿T from the standard terminal part temperature regardlless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

Performance Characteristics

Parameter	Requirement Δ R ±% Limit	Typical	Test Method
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±0.5%	±0.1%	0.2m: 27W for 5 seconds; 0.3m, 0.5m: 24W for 5 seconds
Resistance to Solder Heat	±0.5%	±0.1%	260°C ± 5°C, 15 seconds ± 1 second
Rapid Change of Temperature	±0.5%	±0.1%	-55°C (30 minutes), +150°C (30 minutes), 1,000 cycles
Moisture Resistance	±0.5%	±0.05%	85°C ± 3°C, 85% ± 3°C RH, 1000 hours, 10% Bias
Endurance at 75°C and Less of Terminal Part Temperature	±1.0%	±0.3%	Terminal part temperature: 75°C ± 3°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Low Temperature Exposure	±0.5%	±0.02%	-65°C, 1000 hours
High Temperature Exposure	±1%	±0.5%	+175°C, 1,000 hours

features

- Correcter electric current detection is possible with 4-terminal construction
- Excellent T.C.R. achieved (±50×10^{-6}/K)
- Ultra low resistance, suitable for large current sensing
- Automatic mounting machines are applicable
- Suitable for reflow soldering (Not suitable for flow soldering)
- Products meet EU RoHS requirements
- AEC-Q200 tested

dimensions and construction

environmental applications

One-Pulse Limiting Electric Power

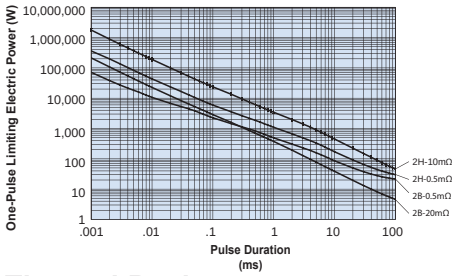
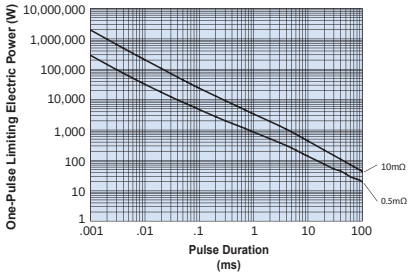
TLR2BW/2BP, TLR2HW



TLR3AP



Please ask us about the resistance characteristic of continuous applied pulse.

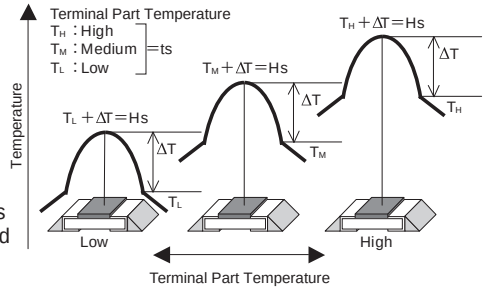
The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Thermal Resistance

Type	Size	Resistance (Ω)	Rth (°C/W)
TLR	2BW/2BP	0.5m	7.2
		20m	116
	2HW	0.5m	9
		10m	61.1
	3AP	0.5m	6
		10m	62

Rth=(Hs-ts)/Power

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.



The temperature of the resistor will increase the same ⊿T from the standard terminal part temperature regardlless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

Performance Characteristics

Parameter	Requirement Δ R ±% Limit	Typical	Test Method
Resistance	Within regulated tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Resistance to Solder Heat	±0.5%	±0.3%	260°C ± 5°C, 10 ± 2 seconds
Rapid Change of Temperature	±0.5%	±0.3%	-55°C (15 minutes) / +150°C (15 minutes), 1000 cycles
Moisture Resistance	±0.5%	±0.1%	MIL-STD-202-106, 0% power, 7a and 7b not required
Biased Humidity	±0.5%	±0.1%	85°C ± 2°C, 85% RH, 1000 hours, 10% bias

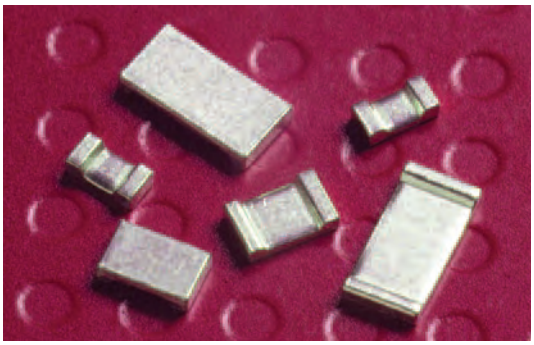
High Temperature Exposure	±1.0%	±0.6%	±155°C, 1000 hours
	±2.0%	±0.8%	±170°C, 1000 hours

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use. 11/10/24



features

- SMD type of small size, high rated current zero ohm jumper
- Low height suitable for use of small equipment such as mobile phone
- Suitable for reflow soldering (Not suitable for flow soldering)
- Products meet EU RoHS requirements
- AEC-Q200 Tested

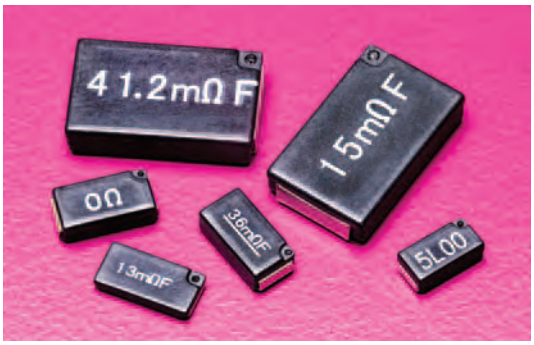
KOA SPEER ELECTRONICS, INC.

SL07, 1, 2, 3, SLN2, SLZ, TSL

TSL, SL (metal plate), SLN: current detecting chip resistors; SLZ: jumper type



EU RoHS COMPLIANT

features

- SMD type of small size, ultra-low resistance (3mΩ～) and high accuracy (±0.5%) resistor for current sensing
- Flameproof UL94V0 molded polymer case
- Excellent dimension accuracy, mountability and shock resistance
- Excellent terminal strength and solderability due to structure of a metal plate terminal electrode
- Easy to absorb the thermal expansion and shrinkage because of a metal plate terminal structure
- Suitable for flow, reflow and iron solderings
- Low profile type available (TSL)
- Wide range operating temperature -55°C to +180°C
- Products with lead-free terminations meet EU RoHS requirements
- AEC-Q200 Tested

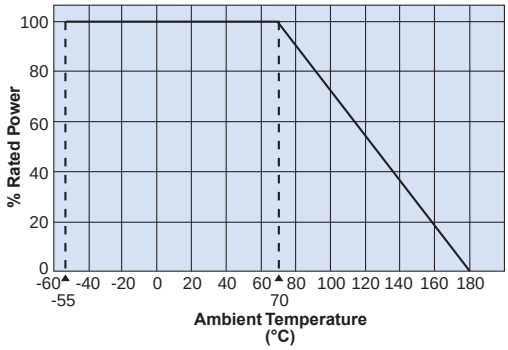
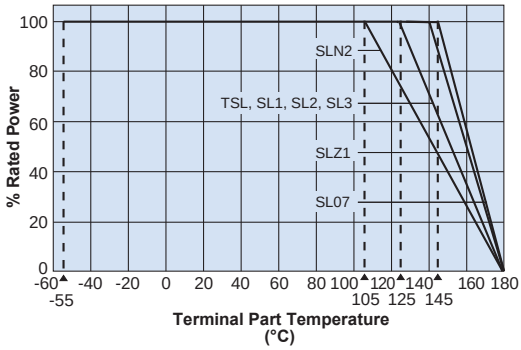
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

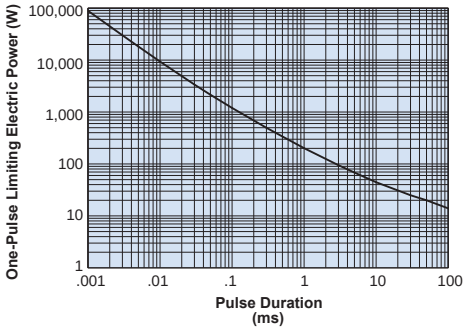


For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

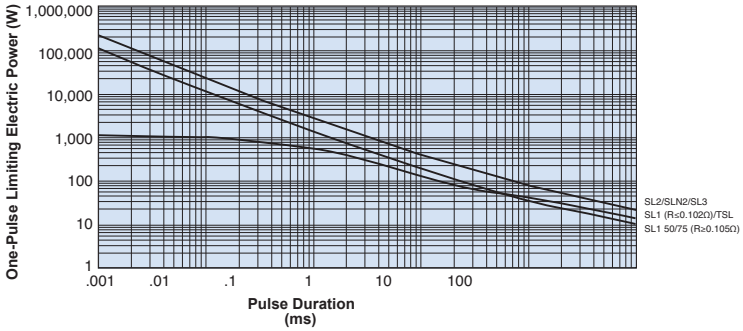
Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

One-Pulse Limiting Electric Power

SL07



SL1 (Metal)/ TSL, SL2, SL3, SLN2



Please ask us about the resistance characteristic of continuous applied pulse.

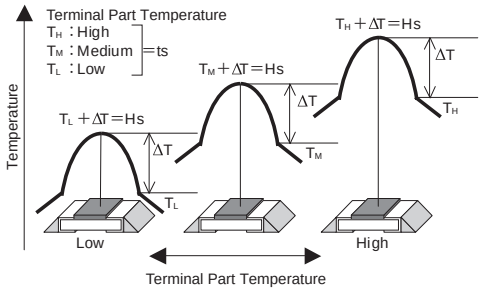
The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Thermal Resistance

Type	Resistance (Ω)	Rth (°C/W)
SL07	5m	26
	22m	48
	100m	78
SL1 TSL	5m	16
	20m	39
	100m	59
SL2	5m	16
	20m	41
	200m	55
SLN2	5m	19
	11m	24
	200m	46

Rth=(Hs-ts)/Power

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.



The temperature of the resistor will increase the same ⊿T from the standard terminal part temperature regardlless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

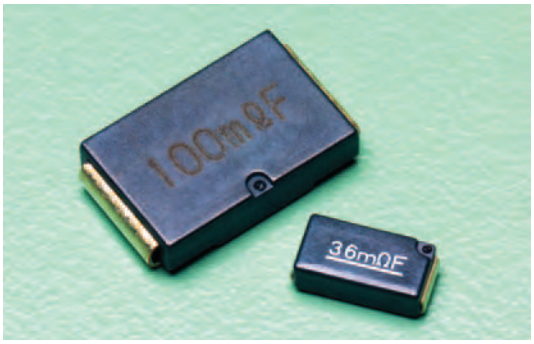
surface mount molded current sense resistors

KOA SPEER ELECTRONICS, INC.

EU RoHS COMPLIANT

current sense



features

- SMD type of small size, ultra-low resistance (3mΩ~) and high accuracy (±0.5%) resistor for current sensing
- Flameproof UL94V0 molded polymer case
- Excellent dimension accuracy, mountability and shock resistance
- Excellent terminal strength and solderability due to structure of a metal plate terminal electrode
- Easy to absorb the thermal expansion and shrinkage because of a metal plate terminal structure
- Suitable for flow, reflow and iron solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

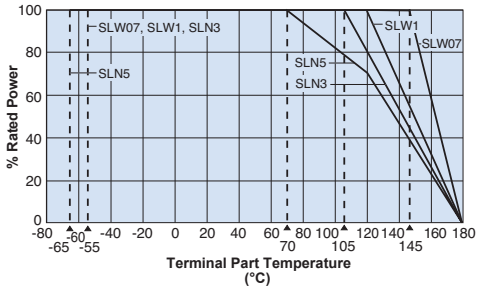
environmental applications

Derating Curve

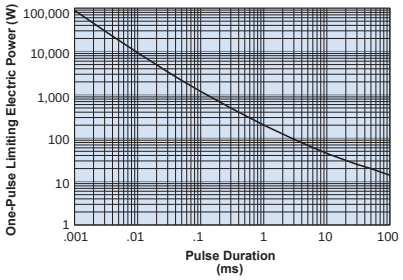


For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

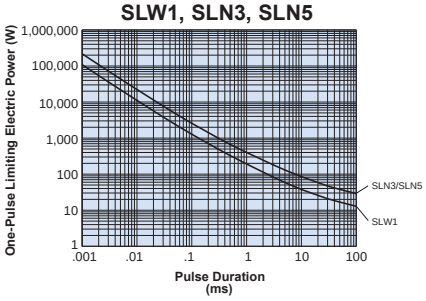
Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

One-Pulse Limiting Electric Power

SLW07



SLW1, SLN3, SLN5

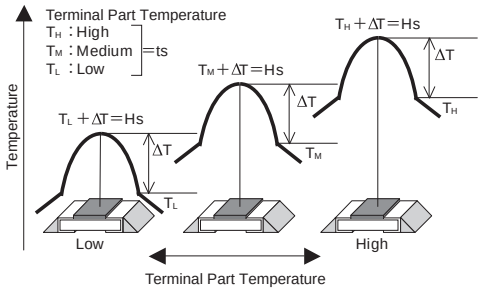


Please ask us about the resistance characteristic of continuous applied pulse.

The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Thermal Resistance

Type	Resistance (Ω)	Rth (°C/W)
SLW07	5m	26
	22m	48
	100m	78
SLW1	5m	16
	20m	39
	100m	59
SLN3	5m	19
	11m	24
	200m	46
SLN5	5m	11
	30m	19
	200m	15



The temperature of the resistor will increase the same ⊿T from the standard terminal part temperature regardlless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

Rth=(Hs-ts)/Power

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.

WK73S

wide terminal type flat chip resistors (low resistance)

EU RoHS COMPLIANT

features

- Wide-side termination (reverse-geometry) type flat chip resistor
- High reliability and performance with T.C.R. ±100 x 10^{-6}/K, resistance tolerance ±0.5%
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

Temperature Rise

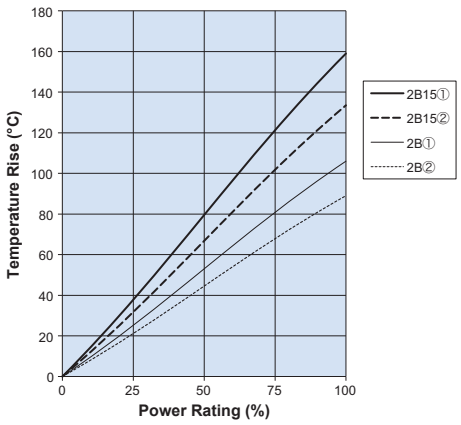
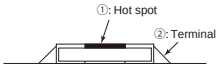
WU73 2B



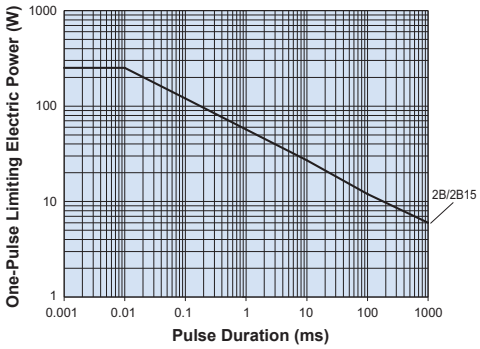
Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35μm



One-Pulse Limiting Electric Power

WU73 2B/2B15



Please ask us about the resistance characteristic of continuous applied pulse.The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.005Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/-55°C and +25°C/+125°C
Overload (Short time)	±2%	±0.2%	Rated Voltage x 2 for 5 seconds
Resistance to Solder Heat	±1%	±0.2%	260°C ± 5°C, 10 seconds ± 1 second
Bending Test	±1%	±0.1%	Holding point 90mm, Bending 1 time, Bending 5mm
Rapid Change of Temperature	±2%	±0.3%	-55°C (30 minutes) / +125°C (30 minutes), 1000 cycles
Moisture Resistance	±2%	±0.1%	40°C ± 2°C, 90%-95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±2%	±0.2%	70°C ± 2°C or rated terminal part temperature ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±1%	±0.1%	+155°C, 1000 hours

Additional environmental applications can also be found at www.koaspeer.com

features

- Current detecting resistors for power supplies, motor circuits, etc.
- Low resistance (100mΩ or under) and high accuracy (±1%) for current detection
- High reliability and performance with T.C.R. ±75x10^{-6}/K
- Suitable for flow and reflow solderings
- Products will meet EU RoHS requirements
- AEC-Q200 tested
- Operating temperature range ~155°C

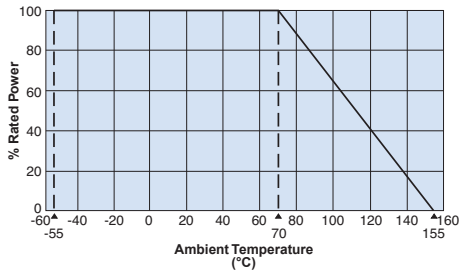
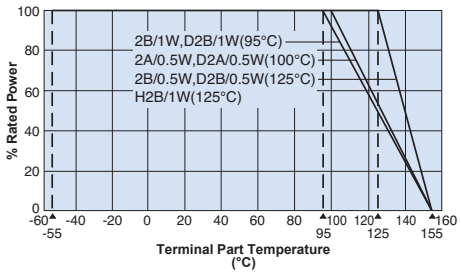
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, the power rating shall be derated in accordance with the above derating curve.



When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown, the power shall be derated according to the derating curve. Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog prior use.

environmental applications

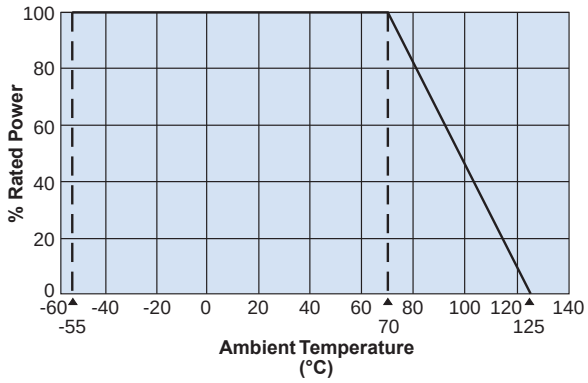
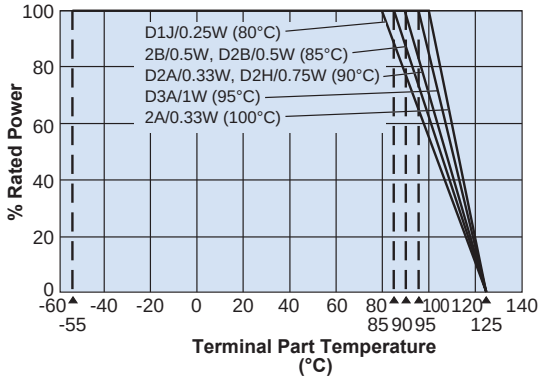
Derating Curve



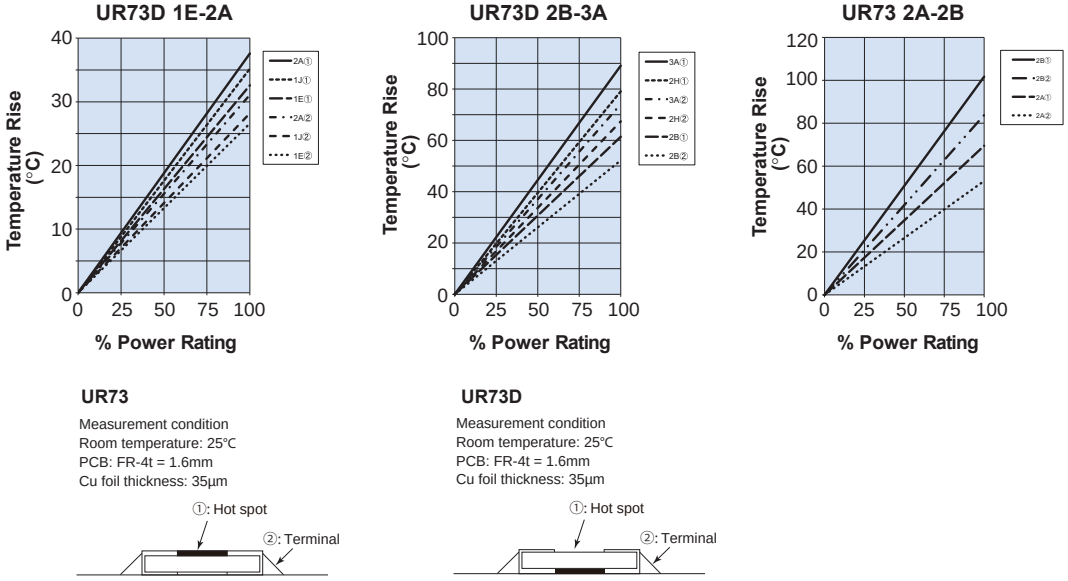


For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog prior use.

Temperature Rise



Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

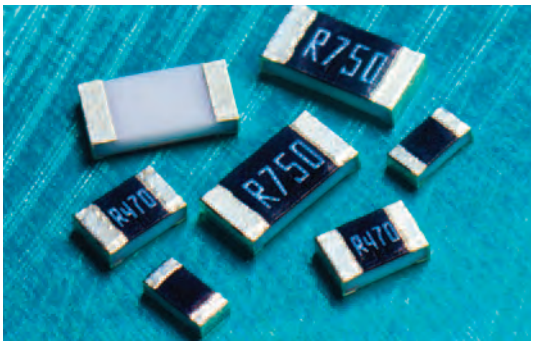
lo-ohm 0.5%, 1%, 2%, 5% tolerance thick film current sense resistor

EU RoHS COMPLIANT



features

- Current detecting resistors for power supply, motor circuits, etc.
- High reliability and performance with resistance tolerance ±0.5%, T.C.R. ±100 x 10^{-6} /K
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested: 0402 (1E), 0603 (1J), 0805 (2A), 1206 (2B), 1210 (2E), 2010 (2H/W2H), 2512 (3A/W3A)

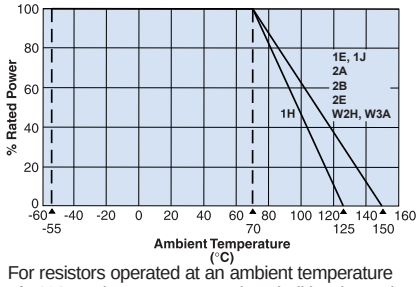
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

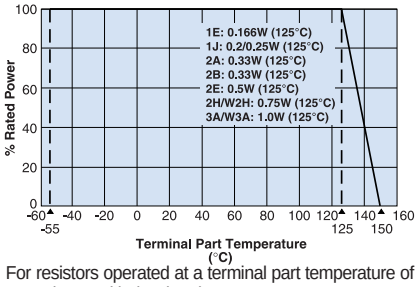
[1] Prior to use, refer to the "Higher Power Ratings" in the beginning of catalog. Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

environmental applications

Derating Curve



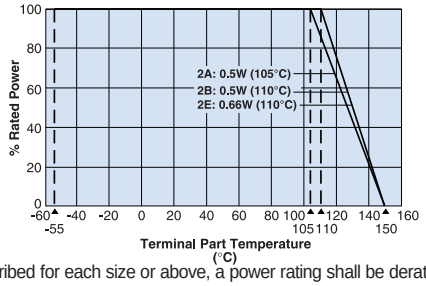
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.



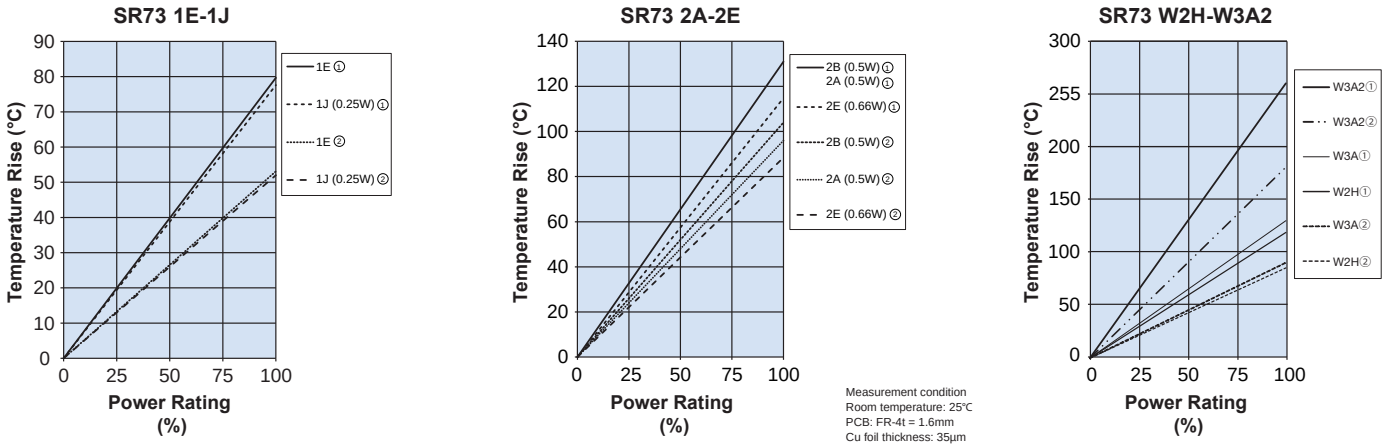
For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" on the beginning of our catalog before use.

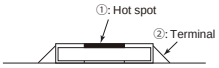
SR73 2A (0.5W), SR73 2B (0.5W), SR73 2E (0.66W)



Temperature Rise

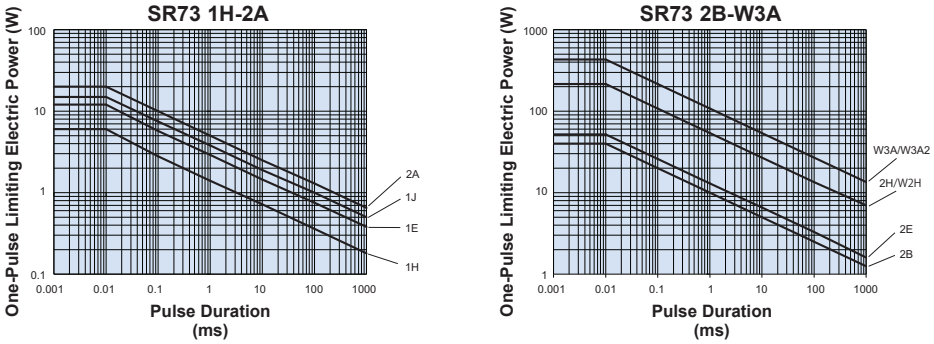


Measurement condition
Room temperature: 25℃
PCB: FR-4t = 1.6mm
Cu foil thickness: 35µm



Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

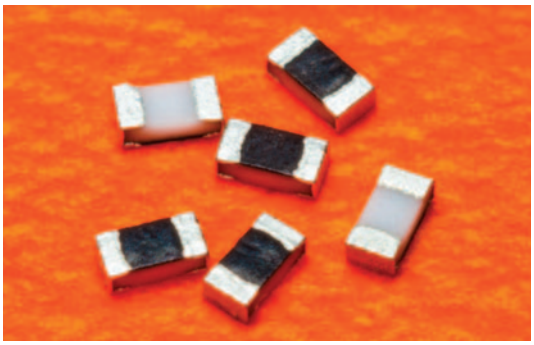


Please ask us about the resistance characteristic of continuous applied pulse.

The pulse endurance values are not assured values,so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement ΔR ±(%+0.005Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/-55°C and +25°C/+125°C
Overload (Short time)	±2%	±0.5%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat	1H: ±3%, 1E~W3A: ±1%	1H: ±0.75% 1E~W3A: ±0.3%	260°C ± 5°C, 10 seconds ± 1 second
Rapid Change of Temperature	±1%	±0.3%	-40°C (30 minutes) / +125°C (30 minutes), 100 cycles
Moisture Resistance	1H: ±3% 1E~W3A: ±2%	±1%	40°C ± 2°C, 90%-95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	1H: ±3% 1E~W3A: ±2%	±1%	70°C ± 2°C or rated terminal part temperature ±2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±1%	±0.3%	1H: +125°C, 1000 hours; 1E, 1J, 2A, 2B, 2E, 2H/W2H, 3A/W3A:+150°C, 1000 hours



features

- Current detecting resistors for power supply, motor circuits, etc.
- High reliability and performance with resistance tolerance ±0.5%, T.C.R. ±100×10^{-6}/K
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested

environmental applications

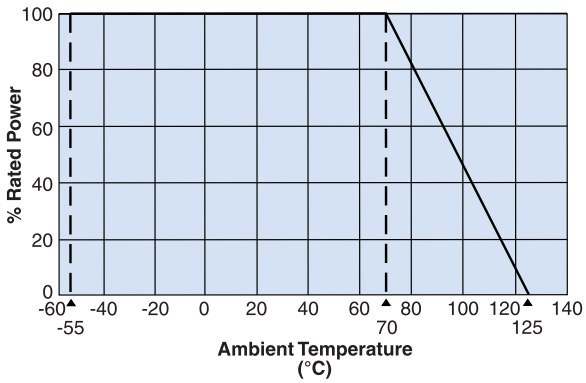
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Surface Temperature Rise

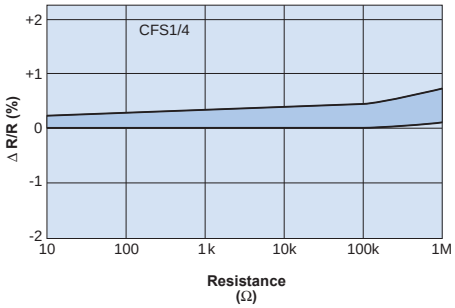
Load Life @ 70°C, 1000 Hr



Performance Characteristics

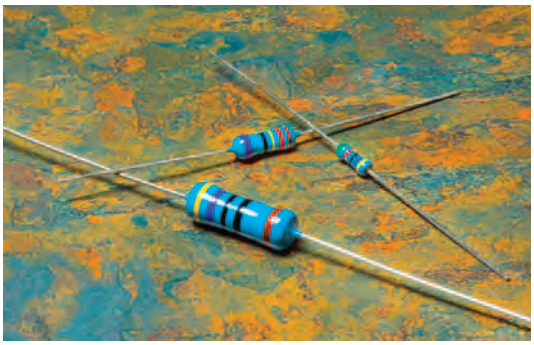
Parameter	Requirement ΔR ±(% + 0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±1%	±0.5%	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is lower
Resistance to Solder Heat	±1%	±0.5%	260°C ±5°C, 10 seconds ± 1 second, 350°C ± 10°C, 3.5 seconds ± 0.5 second
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	±1%	±0.5%	-55°C (30 minutes), +125°C (30 minutes), 5 cycles
Moisture Resistance	±5%	±2.5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±3%	±1.5%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent (CFP & CFPS only)	No abnormality in appearance. Marking shall be easily legible.	—	Ultrasonic washing with Isopropyl alcohol for 2 minutes. Power: 0.3W/cm², f: 28kHz, temp: 35°C±5°C
Flame Retardant (CFP & CFPS only)	No evidence of flaming or self-flaming	—	Flame test: The test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: AC Voltage corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed 4 times the maximum operating voltage.

MF, MFS, RK

general purpose metal film leaded resistor

KOA SPEER ELECTRONICS, INC.

EU RoHS COMPLIANT



features

- Semi-precision metal film resistors
- Meets requirements of MIL-R-22684
- Suitable for automatic machine insertion
- MFS two times the power rating of the standard body type
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- AEC-Q200 Tested: MF1/4, MFS1/4, MFS1/2

environmental applications

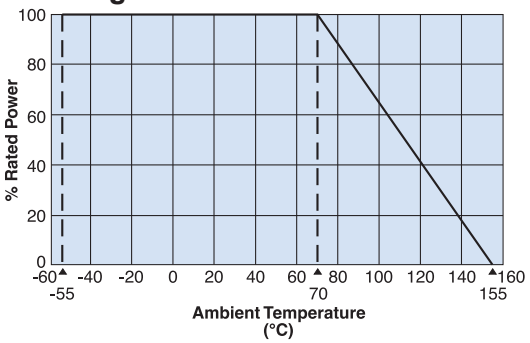
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement ΔR ±(% + 0.05Ω) Limit	Test Method
Resistance	Within specified tolerance	25°C
T.C.R.	Within specified T.C.R.	+25°C/+125°C
Overload (Short time)	±0.5%	Rated voltage x 2.5 or max. overload voltage, whichever is lower, for 5 seconds
Resistance to Solder Heat	±0.25%	260°C ±5°C, 10 seconds ± 1 second
Rapid Change of Temperature	±0.5%	-55°C (30 minutes)/+155°C (30 minutes), 5 cycles
Moisture Resistance	±1%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON/0.5 hr OFF cycle
Endurance at 70°C	±1%	70°C ± 2°C, 1000 hours, 1.5 hr ON/0.5 hr OFF cycle

features

- Flame retardant coating (Equivalent to UL94 V-0)
- Automatic insertion is applicable
- Various types of formings are available
- Products meet EU RoHS requirements

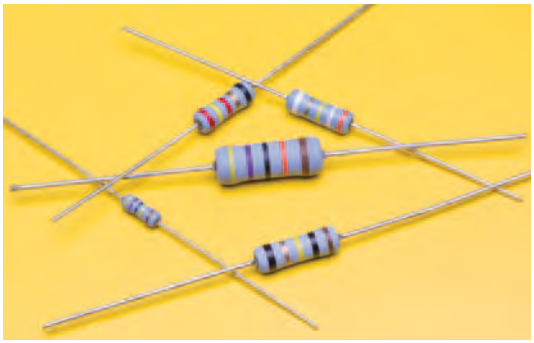
6/04/24



features

- Excellent anti-surge characteristics
- Stable characteristics of moisture resistance up to high resistance range
- RCR50 +(1MΩ - 12MΩ), RCR50EN (1MΩ - 12MΩ) and RCR60 (1MΩ - 12MΩ) are discharge resistors recognized by UL1676 and c-UL(CSA-C22.2 No.1-M94)
- RCR25EN (100kΩ~33MΩ), RCR50EN (100kΩ - 33MΩ) and RCR60 (100kΩ - 56MΩ) is approved by EN6234-68-1 G.10 safety
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- Surface mount style “N” forming is suitable for automatic mounting

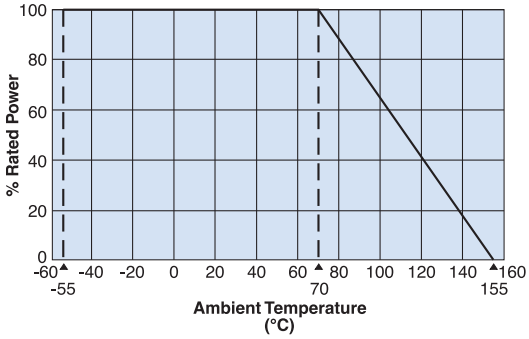
environmental applications

Derating Curve

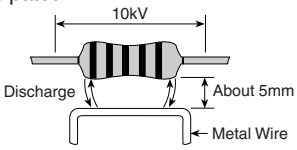


For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Notice of Surge Load

Surge withstanding load voltage for the resistors cannot be guaranteed when the undermentioned 4 items get to a remarkable overload in comparison with the conditions shown by surge withstanding voltage in Anti-surge characteristics. Please contact KOA in advance if such a case is anticipated.

1. Peak voltage to be applied
2. Pulse width
3. Conditions of protecting insulation around the resistor
4. Situation of proximity conductivity object



For example: In the figure, a metal wire is placed less than 5mm away from the resistor body, there is such a case that causes an electric discharge by a surge load 10kV and then destroys the outer coating.

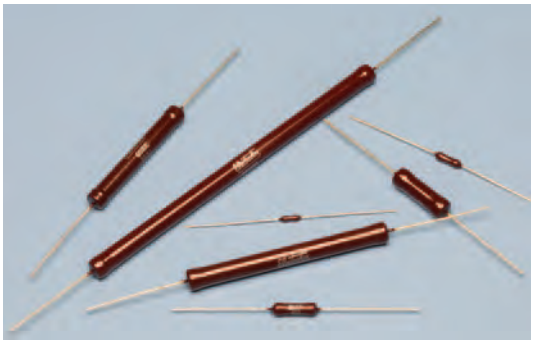
EU RoHS COMPLIANT



features

- Miniature construction can endure to high voltage and high power
- Excellent in anti-surge characteristics
- Wide resistance range of 500kΩ - 10GΩ and small T.C.R.
- Product meets EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in resistor element and brass cap.

leaded resistors

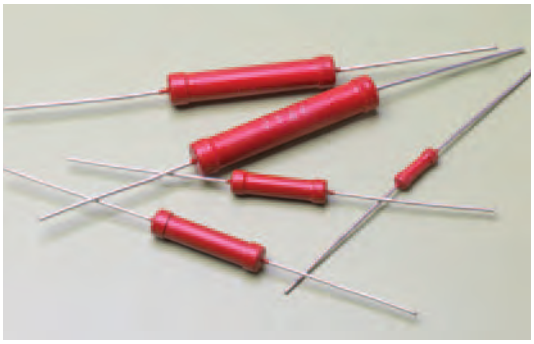
EU RoHS COMPLIANT



features

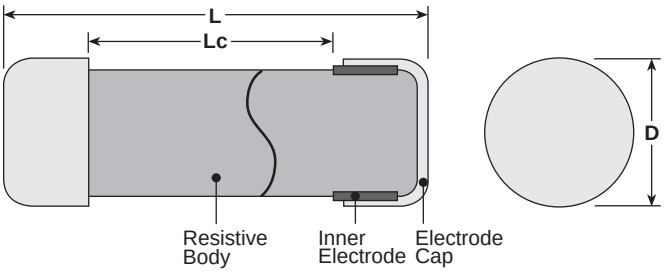
- Suitable for noise suppression of engine ignition system
- Reliable in pulse/transient applications
- Products meet EU RoHS requirements
- AEC-Q200 Tested

dimensions and construction



Size Code	Dimensions inches (mm) L	Lc (min.)	D	Cap Material
CPCN1/2	.421±.02 (10.7±0.5)	.213 (5.4)	.138±.004 (3.5±0.1)	Fe(Ni/Cu plating)

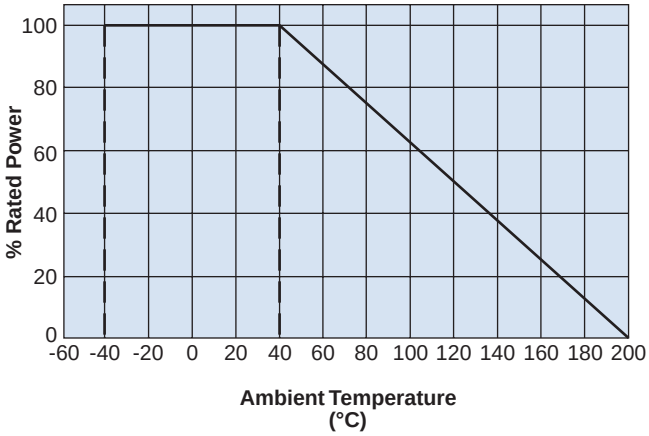
CPCN3	2.0W	15kΩ			173V	432V		

Rated Voltage = $\sqrt{\text{Power Rating x Resistance Value}}$ or Maximum Working Voltage, whichever is lower.

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 40°C or higher, the power rating shall be derated in accordance with this derating curve.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω) Limit	Typical	Test Method			
Resistance	Within regulated tolerance	—	Resistance	Measurement Voltage		25°C
			1kΩ, 2kΩ, 5kΩ	10V		
			10kΩ, 15kΩ	30V		
T.C.R.	-1200±300ppm/°C	—	+25°C/-40°C and +25°C/+125°C			
Voltage Coefficient	0 ~ -0.2%/V	—	Rated voltage and rated voltage x 10%			
Overload	2	0.3	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is less			
Load Life at High Voltage Pulse	30	—	Continuous 250h high voltage pulse on the test circuit (Refer to JIS D5111) CPCN1/2, CPCN1 in insulation oil			
Resistor Body Strength	No mechanical damages	—	Type	Holding Distance	Time	Force
			CPCN1/2	5.0 ± 0.2mm	10 seconds	98N (10kgf)
			CPCN1	9.0 ± 0.3mm		
			CPCN2N/2NS	12.3 ± 0.3mm		
			CPCN3			490N (50kgf)
Rapid Change of Temperature	5.0	—	-55°C (15 minutes), +155°C (15 minutes), 500 cycles			
Moisture Resistance	5.0	0.9	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle			
Load Life	5.0	0.7	40°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle			
Low Temperature Operation	5.0	0.7	-40°C, 24 hours			
High Temperature Exposure	5.0	2.0	+200°C, 1000 hours			

The resistance measurement before and after the examination should be performed in room temperature with difference ±1°C.

KOA SPEER ELECTRONICS, INC.

PSN, PV, PSO, PN, PWW, PAP

high voltage power resistors

EU RoHS COMPLIANT

features

- PSN can respond to high voltage and high power with a wide resistance range of 500Ω～6GΩ
- PSO is made completely moisture preventive to be PSN that can be used under high moisture environment
- PN is a non-inductive type and can be used for high frequency
- PWW and PAP type are non-inductive wire wound resistors
- PWW resistors have the same shapes as PSN and can be used for a low resistance area that cannot be produced with PSN resistors
- PAP resistors are non-inductive wirewound resistors with inductance less than PWW can be used for pulse wave measurement, impulse generators, etc. and have the same dimensions as PWW resistors. EU RoHS regulation is not intended for lead in brass.

* Contact us when you have control request for environmental hazardous material other than the substance specified by EU-RoHS. P series resistors use brass for the electrode cap. Lead in brass is a substance not subject to the EU-RoHS (exemption 6(c)), but please note that it exceeds the threshold of the EU-REACH (Reach 19th SVHC list).

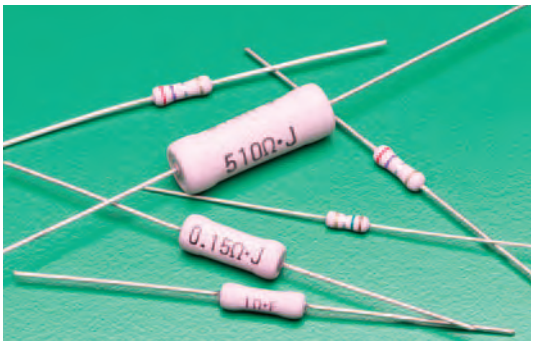
reduced size metal oxide power type leaded resistor



features

- Small size power type resistor
- Coated with UL 94 V-0 equivalent flameproof material
- Suitable for automatic machine insertion
- Surface mount style “N” forming is suitable for automatic mounting
- Various types of formings are available
- High reliability
- Products meet EU-RoHS requirements
- Automatic mounting machine is applicable by surface mounted device style lead forming

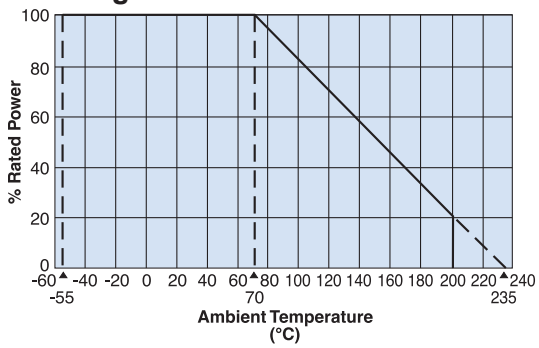
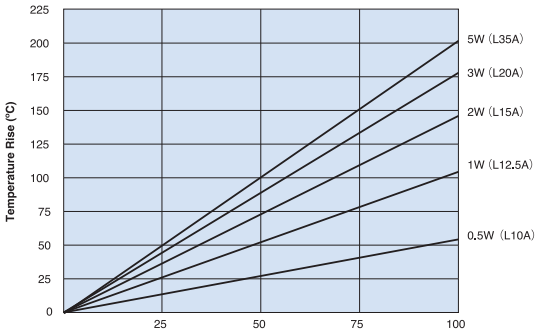
environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Surface Temperature Rise



Performance Characteristics

Parameter	Requirement ΔR ±(% + 0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±(2% +0.1Ω)	±1%	Rated voltage × 2.5 or Max. overload vol., whichever is lower, for 5 seconds
Resistance to Solder Heat	±1%	±0.5%	260°C ± 5°C, 10 seconds ± 1 second, 350°C ± 10°C, 3.5 seconds ± 5 seconds
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	±1%	±0.5%	-55°C (30 minutes) / +155°C (30 minutes), 5 cycles
Moisture Resistance	±(5%+0.1Ω)	±2.5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±(5%+0.1Ω)	±2.5%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent	No abnormality in appearance. Marking shall be easily legible	—	Ultrasonic washing with isopropyl alcohol for 2 minutes. Power: 0.3W/cm³, f: 28kHz, Temp: 35°C ±5°C
Flame Retardant	No evidence of flaming or self-flaming	—	Flame test: the test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: AC voltage corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed the value of 4 times of the maximum operating voltage

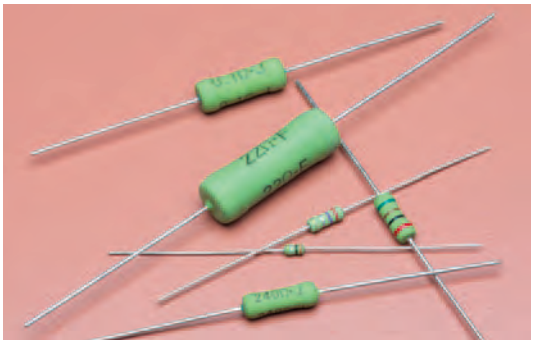
EU RoHS COMPLIANT



features

- Fixed metal film resistor available (specify “SPRX”)
- Flameproof silicone coating equivalent to (UL 94 V-0)
- High reliability
- Suitable for automatic machine insertion
- Products meet EU RoHS requirements
- Automatic mounting machine is applicable by surface mounted device style lead forming
- Small size power type resistors
- Various types of formings are available

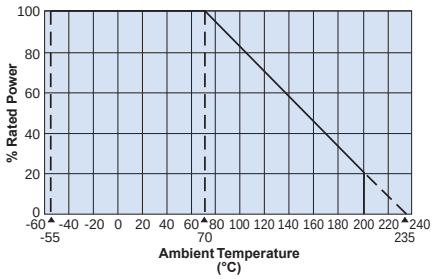
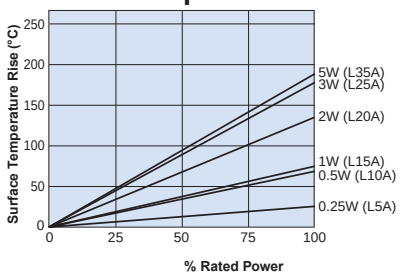
* Please consult when there is a demand of the resistance besides the 1% and 2% range.
Rated Ambient Temperature: +70°C Operating Temperature Range: -55°C to +200°C
Rated voltage=√Power Rating×Resistance value or Max. working voltage, whichever is lower.

environmental applications

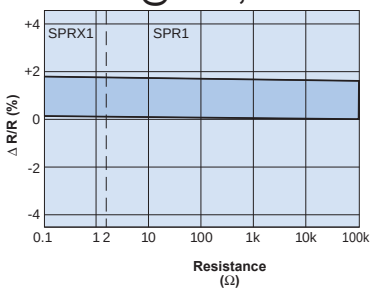
Derating Curve



Surface Temperature Rise



Load Life @ 70°C, 1000 Hr



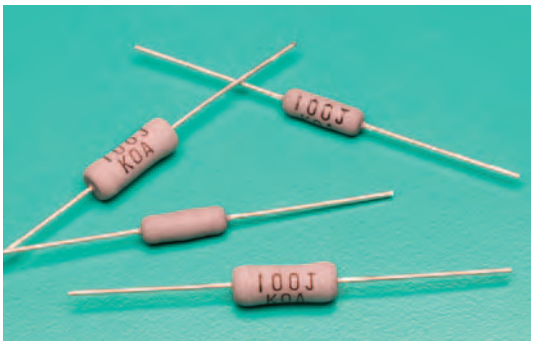
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement Δ R ±(% + 0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±(1%+0.1Ω)	±0.5%	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is lower
Resistance to Solder Heat	±1%	±0.5%	260°C ± 5°C, 10s ± 1s, 350°C ± 10°C, 3.5s ± 0.5s
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	±1%	±0.5%	-55°C (30 minutes) / +155°C (30 minutes), 5 cycles
Moisture Resistance	±(3%+0.1Ω):1/4W-2W ±(5%+0.1Ω):3W,5W	1.5: 1/4W-2W 2.5: 3W, 5W	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±(3%+0.1Ω):1/4W-2W ±(5%+0.1Ω):3W,5W	1.5: 1/4W-2W 2.5: 3W, 5W	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent	No abnormality in appearance. Marking shall be easily legible	—	Ultrasonic washing with isopropyl alcohol for 2 minutes. Power: 0.3W/cm³, f: 28kHz, Temp: 35°C ±5°C
Flame Retardant	No evidence of flaming or self-flaming	—	Flame test: the test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: power (AC) corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed the value of 4 times of the maximum operating voltage

11/22/24

EU RoHS COMPLIANT



features

- Flameproof retardant coating (equivalent to UL94 V-0)
- Fail-safe mains fusing at AC 250V (CWFS23: 4.7Ω~9.1Ω: AC200V)
- Products with lead-free terminations meet EU RoHS

Lead length changes depending on taping and forming type.

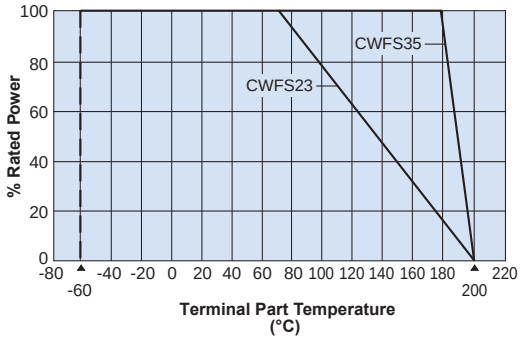
applications and ratings

Part Designation	Power Rating	Rated Terminal Part Temperature	Resistance Range E-24 (J±5%)	Fusing Characteristics		T.C.R. (x10^{-6}/K)	Operating Temperature Range
				Fusing Power	Fusing Time		
CWFS23	3W	+120°C	4.7Ω - 100Ω	90W	30s Max.	±100	-55°C to +200°C
CWFS35	5W	+180°C	4.7Ω - 100Ω	150W	30s Max.	±100	

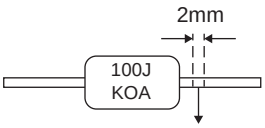
Rated voltage= $\sqrt{\text{Power Rating} \times \text{Resistance value}}$

environmental applications

Derating Curve

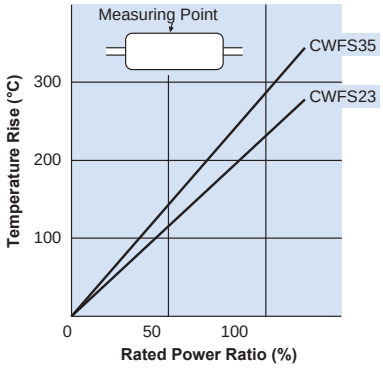


When the rated terminal reference point temperature of the resistor exceeds the rated terminal reference point temperature shown above, the power shall be derated according to the derating curve.



Rated terminal reference point temperature

Temperature Rise (Ref.)

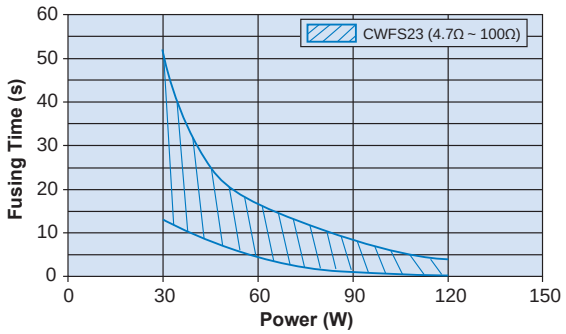


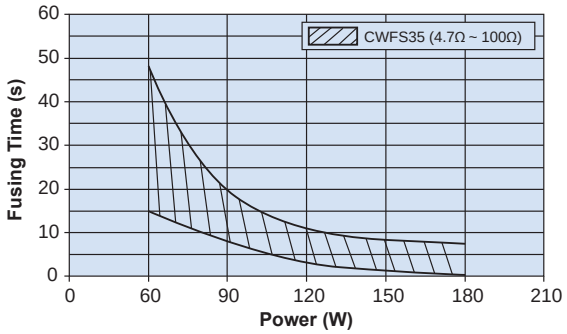
Fixing Board t=1.2 Material: Glass Epoxy Board

Performance Characteristics

Parameter	Requirement ΔR ±(% + 0.05Ω) Limit	Typical	Test Method
Resistance	Within regulated tolerance	—	25°C
T.C.R.	±100X10^{-6}/K	—	+25°C/-55°C and +25°C/+125°C
Melt Time	30 seconds	4 seconds	Power rating x 30
Overload (Short Time)	5%	2%	Rated rating x 10, 5 seconds
Resistance to Solder Heat	1%	0.8%	350°C ± 10°C for 3.5 seconds or 260°C ± 5°C for 10 seconds
Moisture Resistance	5%	4%	Power rating x 1/10, 40°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance of Rated Terminal Part Temperature	5%	3%	CWFS23: 120°C ± 2°C; CWFS35: 180°C ± 2°C 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent	No abnormaly in appearance such as disappearance of making, etc.	—	On immersing the sample in IPA for 3 min., the resistor surface should be lightly wiped with a dry cloth (velvet or gauze)

Example of Fusing Characteristics



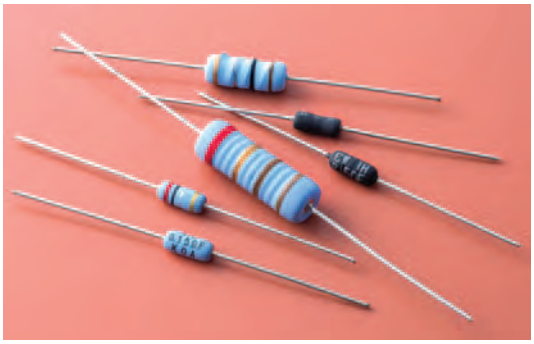


KOA SPEER ELECTRONICS, INC.

CW, CWP, CWH

coat-insulated, precision coat-insulated and miniature wirewound leaded resistors

EU RoHS COMPLIANT



features

- Flameproof silicone coating equivalent (UL 94 V-0)
- CWH resistors meet MIL-PRF-26 (U characteristics)
- CWH high precision resistors with T.C.R. less than ±20x10^{-6}/K
- Suitable for automatic machine insertion
- Excellent in long time stability
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- CW1SS has UL1412 approval (File No. E320246)
- Surface mount style “N” forming is suitable for automatic mounting CW, CWP

features

- Resistors meeting MIL-R-26E (U and V characteristics) and surface temperature (hot spot) 350°C max.
- Resistors with a wide range of 0.1Ω ~ 62kΩ, covering applications from precision to power
- RW☐N type resistors are non-inductive wound and can be used in high frequency applications.
- Products meet EU RoHS requirements

EU RoHS COMPLIANT

EU RoHS COMPLIANT

features

- Power type current detecting resistors
- Flame retardant resistors in ceramic case
- Automatic insertion for a 5mm pitch between terminals is applicable (26 type, 58 type)
- Low inductance
- Space saving
- Products with lead-free terminations meet EU RoHS requirements

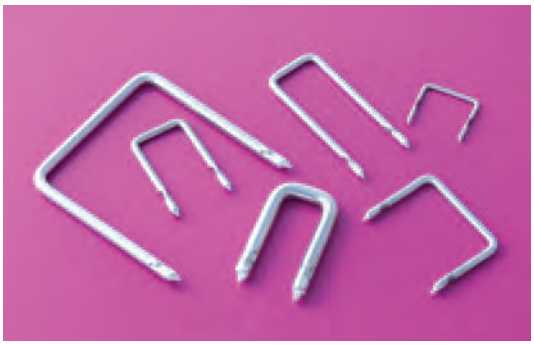
Moisture Resistance	±5.0%	±3.0%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±5.0%	±3.0%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±3.0%	±2.0%	+125°C, 100 hours
Resistance to Solvent	No evidence of damage to protective coating and marking	—	After immersing the sample in I.P.A for 60 seconds ± 10 seconds, the resistor surface should be rubbed with absorbent cotton 10 times

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use. 11/09/22

EU RoHS COMPLIANT



features

- The super low resistance (3mΩ ~) is suitable for high power current sensing
- Pitches and heights adjustable according to mounting conditions
- All custom-made products
- Easy soldering
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

dimensions and construction

Precautions for the Thermal Sensors

Refer to the precautions of common matters for all products in the beginning of this catalog.

Particulars Common to Thermal Sensors

- Excessive voltage such as ESD, could damage thermal sensors.
- Water drops from condensation or impure substances that adheres between the electrode wires may cause insulation deficiency and lower the resistance value of the thermal sensors. Be aware when using this product.
- Avoid sudden changes in temperature to maintain the accuracy of the thermal sensors.
- Some of the thermal sensors use special temperature sensing films. Contact us if the sensors are constantly operated under high temperature environment.
- It is necessary to suppress self heating in the design to maintain accuracy of the thermal sensor if rated temperature is set.

Platinum Thin-Film Thermal Sensors

- Welding is recommended to connect the lead wires of SDT101B, SDT310P, SDT310MTM, SDT310AP, SDT310HCTP and SDT310VASP2 since they are heat resistant lead wires. Select the flux for stainless-steel when soldering. Wash the flux with hot water after the soldering to remove the residue completely.
- The 3-wire or 4-wire method is recommended for implementing high precision temperature measuring for both SDT101 and SDT310 series.
- When molded or placed in a metal tube filled with resin, the resistance value may change depending on the kind of resins used.

Terms and Definitions

Platinum Thin Film Thermal Chip Sensors

- Also known as a platinum resistance temperature detector, an electronic component whose resistance value changes with temperature as determined by standards.
- It uses a platinum thin film as a resistor and has excellent environmental resistance, and its resistance value rises almost linearly as the temperature rises.

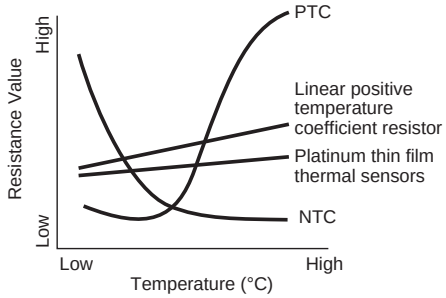
Linear Positive Temperature Coefficient Resistor

- Unlike the platinum thin film thermal chip sensors, there are many types of resistance value changes with temperature, and there are many types of resistance values, and the resistance value changes with temperature.
- The resistance value change range is narrow compared to the thermistors but the linearity is high.

Thermistor

- Thermally sensitive resistors, constructed from temperature sensitive semi-conductive materials, with predictable, large variation in resistance due to change in temperature. There are two kinds of thermistors characterized by resistance change.
- PTC (Positive Temperature Coefficient): Resistance increases with a rise in temperature.
- NTC (Negative Temperature Coefficient): Resistance decreases with a rise in temperature.

Thermal Time Constant



- Time needed for a sensor's temperature to change 63.2% when the ambient temperature of a sensor is rapidly changed by a condition in which self heat generation can be ignored.

Thermal Dissipation Constant

- The necessary power which is needed to increase the temperature of the element 1℃ by self heating and is expressed with the following formula:

$$\delta(W/°C) = W/(T1-T)$$

W : Electrical input power (W)
T : Standard Temperature (℃)
T1 : Self heating temperature generated by applied power (°C)

Self-Heating Coefficient

- Self-heating coefficient expressed in °C/mW is values measured at temperature: 0°C in flowing oil with a velocity >0.2m/s, which is value of elements and vary with connecting or fixing methods.

Temperature Coefficient of Resistance (T.C.R.)

- Relative variation of resistance between two given temperatures when temperature is changed by 1K, which is calculated by the following formula.

$$\text{T.C.R. (ppm/°C)} \quad \frac{R-R_0}{R_0} \times \frac{1}{T-T_0} \times 10^6$$

R : Resistance value (Ω) at T (°C)
R0 : Resistance value (Ω) at T0 (°C)
T : Measured test temperature (°C)
T0 : Measured base temperature (°C)

Specified Current

- The electricity which it is charged with in the element is moved to the range that rise in temperature due to a self-heat generation can be ignored. Ordinarily recommended measuring currents are 1mA for 100Ω and 0.1mA for 500Ω.

Rated Power

- The maximum wattage which can be continuously applied to a resistor at the rated ambient temperature.

Critical Resistance Value

- The maximum nominal resistance value at which the rated power can be applied without exceeding the maximum working voltage.
- The rated voltage is equal to the maximum working voltage at the critical resistance value.

Maximum Working Voltage

- Maximum D.C. or A.C. voltage (rms) that can be continuously applied to a resistor or a thermosensor. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.

Overload Voltage

- Allowable voltage which is applied for 5 sec. according to the short time overload test. Overload voltage shall be 2.5 times of rated voltage or max. overload voltage, whichever is lower.

Rated Ambient Temperature

- Maximum ambient temperature at which the power rating may be applied continuously. The rated ambient temperature refers to the temperature around the resistor mounted inside the equipment, not to the air temperature outside the equipment.

Derating Curve

- Curve that expresses the relation between ambient temperature and the maximum allowable power, which is generally expressed in percentage.

External Conductor

- A conductor connected to a temperature sensor that is located outside of the protective body.

Internal Conductor

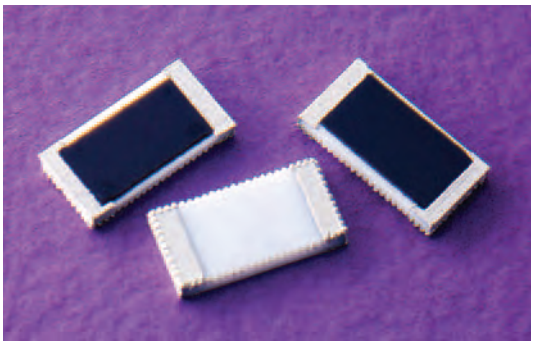
- A conductor connected to a temperature sensor that is located inside of the protective body.

SDT73H, SDT73S

platinum thin film thermal chip sensors

KOA SPEER ELECTRONICS, INC.

EU RoHS COMPLIANT



features

- SMD platinum thin film thermal sensors
- T.C.R. is in accordance to JIS-DIN standards IEC
- Suitable for temperature control in various industrial equipment
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105℃, read the value in the column where 100℃ in the vertical axis and 5℃ in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ωat 0℃ will be the value obtained by multiplying the resistance value in this table by 5.

Performance Characteristics

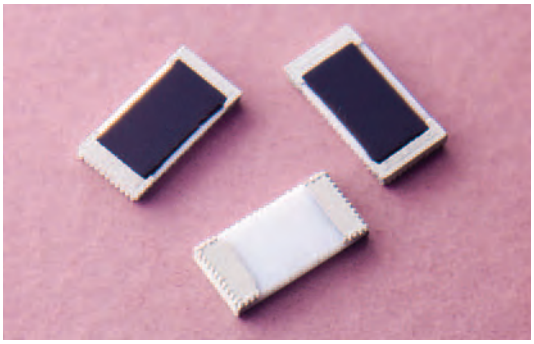
KOA SPEER ELECTRONICS, INC.

SDT73V

platinum thin film thermal chip sensors (for automotive)

EU RoHS COMPLIANT



features

- SMD platinum thin film thermal sensors
- T.C.R. is in accordance to JIS IEC standards
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements
- AEC-Q200 Tested

dimensions and construction

applications and ratings

Part Designation	Resistance @ 0°C	Resistor Tolerance	Thermal Time Constant[1]	Thermal Dissipation Constant[1]	T.C.R. (ppm/°C)[2]	T.C.R. Tolerance (ppm/°C)	Specified Current[3]	Operating Temperature Range
SDT73V 2B	100Ω 500Ω	C: ±0.2% F: ±1%	6.5 seconds	2.4mW/°C	3850	±50	1mA Max.: 100Ω 0.1mA Max.: 500Ω	-55°C to +155°C

1 Thermal time constant and thermal dissipation constant are reference values, which are values of elements and vary with connecting or fixing methods. Thermal dissipation constant is approx. 4mW/°C under the surface mounting condition.

2 T.C.R. measuring temperature: 0°C/+ 100°C

3 The electricity which it is charged with in the element is moved to the range that rise in temperature due to a self-heat generation can be ignored. Oridinarily recommended measuring currents are 1mA for 100Ω and 0.1mA for 500Ω.

For further information on packaging, please refer to Appendix A.

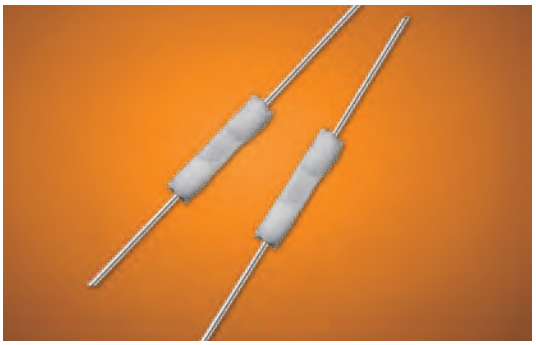
SDT310VASP2

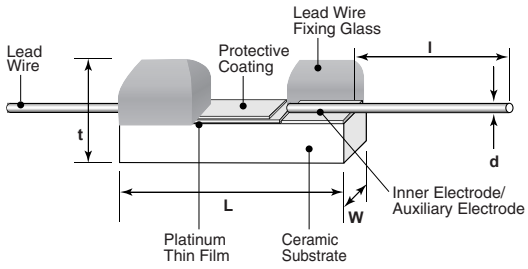
small type platinum thin film thermal sensors (small heater element)



features

- Achieves a thermal time constant of 2.8-seconds due to volume reduction
- Excellent heat-resistance
- Applies axial lead type suitable to use as heater element
- Products with lead-free terminations meet EU RoHS requirements
- AEC-Q200 Tested

dimensions and construction



Type	Dimensions inches (mm)				
	W	L	t	l	d

thermal sensors

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified T.C.R.	—	0°C/ +100°C
Rapid Change of Temperature	±0.5%	-0.15%	-55°C (30 minutes)/ +200°C (30 minutes) 1000 cycles
Moisture Resistance	±0.5%	-0.12%	85°C ± 2°C, 85% RH, 1000 hours, 10mA, 1.5 hr ON, 0.5 hr OFF cycle
Normal Temperature Load Life	±0.5%	±0.10%	25°C ± 10°C, 1000 hours, 76mA, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Load Life	±0.5%	±0.11%	125°C, 1000 hours, 73mA continuous turning on electricity
Mechanical Shock	±0.5%	±0.04%	100g's maximum, 6Dms (standard), 12.3ft/s
Vibration	±0.5%	-0.03%	Test from 10-1900hz 30g's for 20 minutes, 12 cycles each of 3 orientations
Component Strength	400g and more	—	Pull test

Actual Value (out of guarantee)

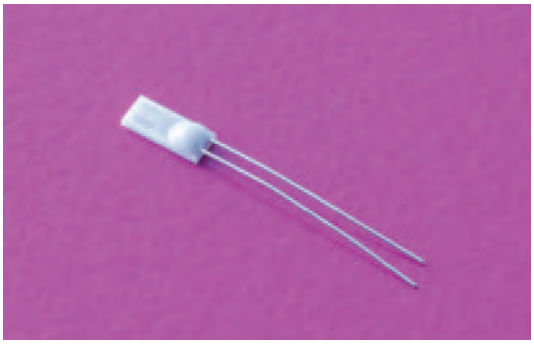
Test Items	Reference	Test Method
High Temperature Exposure	0.4%	+600°C, 1000h

SDT310HCTP

small type platinum thin film thermal sensors (narrow)

KOA SPEER ELECTRONICS, INC.

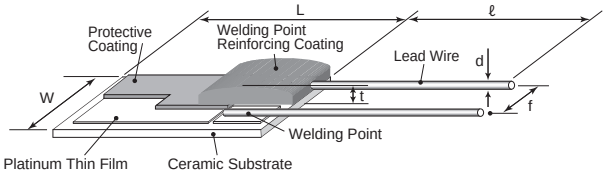
EU RoHS COMPLIANT



features

- Characteristics are equivalent with IEC 60751-2008, JISC 1604-2013
- Small package of 1.2mm x 3mm with 100Ω resistance
- Products meet RoHS requirements. RoHS regulation is not intended for Pb-glass contained in glass.

dimensions and construction



Type	Dimensions inches (mm)					
	W	L	t	f (Nom.)	d	l
SDT310HCTP	.047±.004 (1.2±0.10)	.118±.004 (3.0±0.10)	.043 max. (1.1 max.)	.002 (0.5)	.006±.002 (0.15±0.05)	.315 (8)

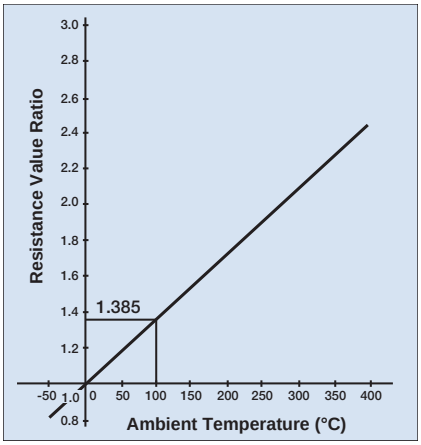
1 [t] is a measuring temperature indicated at ℃ that is not related to marking + • –.
2 T.C.R. Mesuring Temperature : 0℃/+100℃.
3 Thermal time constant is value measured in stationary air and is typical value, which is value of element and vary with connecting or fixing methods.
4 Self-heating coefficient expressed in ℃/mW is values measured at temperature : 0℃ in flowing oil with a velocity >0.2m/s, which is value of elements and vary with connecting or fixing methods.
5 Specified current is a current value that is used at reliability test under the condition of self heat-generation that can be disregarded. Recommended measuring currents 1mA for 100Ω.

environmental applications

Temperature Characteristics



Approximate Expression for Resistance-Temperature Characteristics

-55°C~0°C :$R_T=R_0\{1+C_1T+C_2T^2+C_3(T-100)T^3\}$

0°C~+400°C :$R_T=R_0(1+C_1T+C_2T^2)$

R_T : Resistance value at T°C

R_0 : Resistance value at 0°C°C

T : Ambient temperature(°C)

Constants C_1, C_2, C_3:

$C_1=3.908\times10^{-3}\,°C^{-1}$

$C_2=-5.775\times10^{-7}\,°C^{-2}$

$C_3=-4.183\times10^{-12}\,°C^{-4}$

KOA SPEER ELECTRONICS, INC.

SDT310

small type platinum thin film thermal sensors

EU RoHS COMPLIANT

features

- T.C.R. is in accordance to JIS-DIN IEC standards
- The small package with a real ability of 1kΩ resistance
- Thermal time constant is improved with the small package
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in glass.

1 [t] is a measuring temperature indicated at •C that is not related to marking + • –.
2 T.C.R. measuring temperature: 0°C/+100°C.
3 Thermal time constant and thermal dissipation constant are values measured in stationary air and are typical values, which are values of elements and vary with connecting or fixing methods.
4 The electricity which it is charged with in the element is moved to the range that rise in temperature due to a self-heat generation can be ignored. Recommended measuring currents are 1mA for 100Ω and 0.1mA for 500Ω or 1kΩ. SDT310AP can be used as hot-film sensor. Maximum specified current is 100mA when using under self-heating condition.

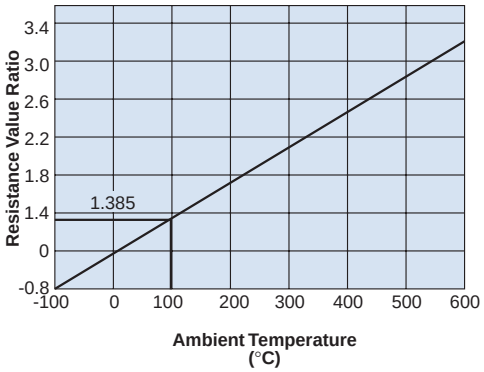
environmental applications

Temperature Characteristics



Approximate Expression for Resistance-Temperature Characteristics

-55°C~0°C :$R_T=R_0\{1+C_1T+C_2T^2+C_3(T-100)T^3\}$

0°C~+650°C :$R_T=R_0(1+C_1T+C_2T^2)$

R_T : Resistance value at T°C

R_0 : Resistance value at 0°C°C

T : Ambient temperature(°C)

Constants C_1, C_2, C_3:

$C_1=3.9083\times10^{-3}\,°C^{-1}$

$C_2=-5.775\times10^{-7}\,°C^{-2}$

$C_3=-4.183\times10^{-12}\,°C^{-4}$

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 1KΩ at 0°C will be the value obtained by multiplying the resistance value by 10.

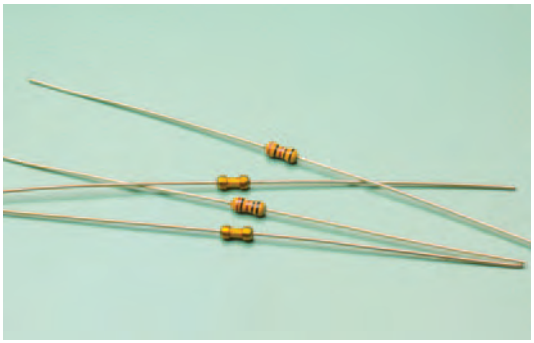
Resistance to Solder Heat	±0.5%	±0.014%	350°C for 3.5 seconds
Rapid Change of Temperature	±0.12%	-0.026%	-55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +155°C (30 minutes)/ +25°C (2 - 3 minutes), 10 cycles (SDT310LTC, SDT310HLTC); -55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +400°C (30 minutes)/ +25°C (2 - 3 minutes), 10 cycles (SDT310P, SDT310A); +25°C (30 minutes)/ +650°C (30 minutes) 10 cycles (SDT310MTM)
Moisture Resistance	±0.5%	-0.004%	60°C ± 2°C, 90 - 95% RH, 1000 hours, 1mA, 1.5 hr ON, 0.5 hr OFF cycle
Normal Temperature Load Life	±0.5%	-0.017%	20°C ± 10°C, 1000 hours, 1mA continuous turning on electricity
High Temperature Load Life	±0.5%	-0.022%	155°C ± 2°C (SDT310LTC, SDT310HLTC), 400°C ± 8°C (SDT310P, SDT310AP), 1000 hours, 650°C ± 13°C (SDT310MTM), 250 hours, 1mA continuous turning on electricity
High Temperature Exposure	±0.12%, ±0.5% (SDT310MTM)	-0.027%, -0.060% (SDT310MTM)	+155°C (SDT310LTC, SDT310HLTC), +400°C (SDT310P, SDT310AP), +650°C (SDT310MTM), 250 hours
Low Temperature Exposure	±0.12%	-0.036%	-55°C, 250 hours

SDT101

platinum thin film thermal sensors

EU RoHS COMPLIANT



features

- SDT101SA is ultra-compact sensor element and offers 1kΩ
- Simple structure for lead forming
- STD101A and SDT101SA can be easily soldered
- Ideal for low directivity heat flow sensor elements
- Products meet EU RoHS requirements
- AEC-Q200 Tested (SDT101B 500Ω, SDT101SA)

dimensions and construction

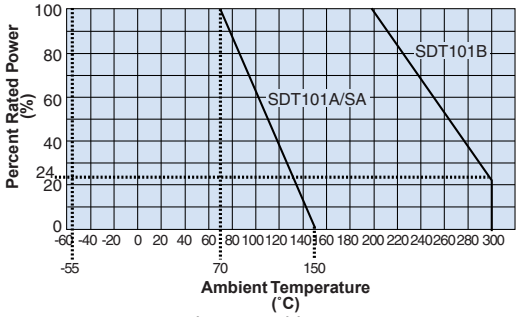
* Thermal time constant and thermal dissipation constant are reference values, which are values of elements and vary with connecting or fixing methods. T.C.R. measuring temperature: 0°C/+100°C

12/6/24

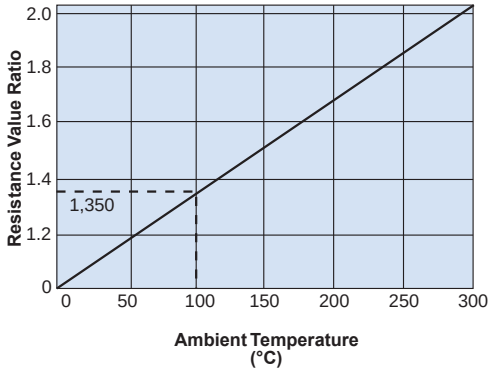
environmental applications

Derating Curve



For sensors operated at an ambient temperature or above, a power rating shall be derated in accordance with the above derating curve.

Example of Temperature Characteristics of Resistance



Approximate Expression for Resistance-Temperature Characteristics

R_T: Resistance value at T°C
R_0: Resistance value at 0°C
T: Ambient temperature (°C)
Constants C_1, C_2:
C_1=0.356297x10^{-2} C_2=0.617945x10^{-6}

300	201.31	—	—	—	—	—	—	—	—	—

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 136.72Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 10Ω at 0°C will be the value obtained by dividing the resistance value by 10 and the value for 1kΩ at 0°C will be value obtained by multiplying the resistance value by 10.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified T.C.R.	—	0°C/ +100°C
Overload (Short Time)	±0.5%	±0.2%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat (SDT101A)	±0.3%	±0.1%	350°C, 1 second (SDT101A/SA)
Rapid Change of Temperature	±0.5%	±0.2%	-55°C (30 minutes)/ +25°C (10 minutes)/ +150°C (30 minutes)/ +25°C (10 minutes), 5 cycles
Moisture Resistance	±1%	±0.3%	80°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±1%	±0.2%	70°C ± 3°C (SDT101A/SA), 200°C ± 3°C (SDT101B), 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±1%	±0.7%	+150°C (SDT101A/SA), +300°C (SDT101B), 1000 hours
Shelf Life	±0.3%	±0.1%	Left for 1 year on shelf in natural condition

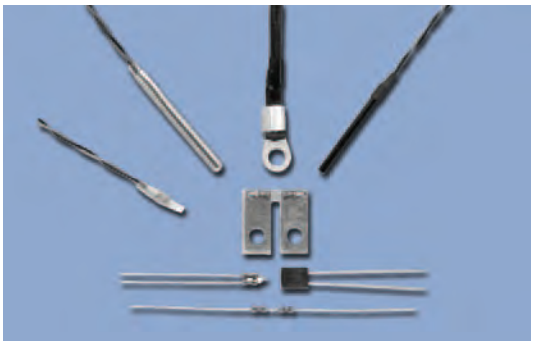
RoHS COMPLIANT



features

- All ST-series thermal sensors are custom-made products. ST-series thermal sensors are designed in various shapes in accordance with your application using a platinum thin-film thermal sensor (SDT101, SDT310 series) as an element. Shapes of sensor parts can be designed flexibly to meet your shapes and dimensional needs, from simple resin mold parts to sensor parts sealed in metal protective tubes made of SUS316.
- Products with Pb Free symbol “F” meet EU RoHS requirements

ordering information

ST3000 Series, 1kΩ, resistance tolerance B • C are produced in pair of SDT101Series. The combination of ST3000 series, resistance tolerance B-T.C.R. and tolerance D is equivalent to class B of SDT310 tolerance to the measuring temperature.

In the above table specification there are restrictions on manufacturing range depending on part number. Please refer to the Performance list.

environmental applications

Example of	Material
Processing Protective Tubes	PPS
	Epoxy resin coating
	Fluorine resin shrinkage tube
	Polyimide
	SUS304
	SUS316
	Cu

Example of	Material
Processing External Conductors	Polyurethane coated wire
	Parallel heat-resistant vinyl chloride wire
	Fluorine resin coated wire
	Form
	2-wire system
	3-wire, 4-wire system
	Shielded wire

Example of	Form
Processing of Terminals	Processing of connecting terminals
Others	Mounting on printed circuit board

guarantee of product

The guaranteed term of the product is one year after delivery. However, when trouble occurs during the guaranteed term because of our responsibility, the product is exchanged or is repaired. We guarantee the product itself, any damages caused by this product shall be excused.

EU RoHS COMPLIANT

features

- Thin film thermal sensors of SMD type
- Resistance tolerance ±1%, a wide range of TCRs +3000x10^{-6}/K~+5000x10^{-6}/K with the standard products
- Suitable for control of temperatures in various industrial equipment
- Suitable for both flow and reflow soldering
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

LT73V

linear positive temperature coefficient flat chip resistors (for automotive)

features

- SMD thin film resistors with thermo-perceptivity
- Various TCRs +150 - +4500×10^{-6}/K are available
- Operating temperature range -155°C
  Rated ambient temperature: 85°C
- Products meet EU RoHS requirements
- AEC-Q200 Tested

EU RoHS COMPLIANT

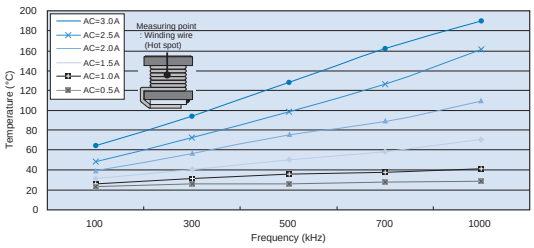
Precautions for the Inductors

Refer to the precautions of common matters for all products in the beginning of this catalog for the matters common to all products.

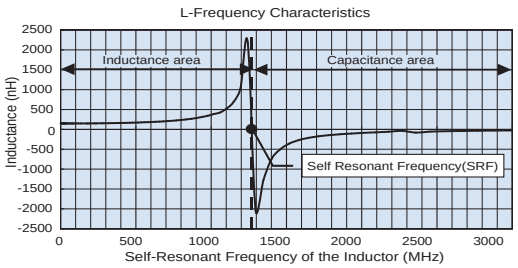
Inductors in General

- Characteristics such as the inductance, Q value etc. are frequency dependent.
- The stress from resin coating and molding can result in change of inductance.
- Since the inductors use ceramic materials, chipping and cracking can occur. Please be careful when handling. Excessive vibration and impact could destroy the parts.
- Keep magnetic tweezers and other magnets away from the inductors to avoid change of inductance caused by magnetization. Do not press the wire wound part of the chip inductor with sharp objects.
- The inductance could decrease according to magnetic saturation when the inductor is used exceeding the allowable current. There is also a possibility of disconnection and short-circuit or emitting smoke and ignition caused by the heat generation of the inductor.
- There is a risk of disconnection when excessive current (inrush current) is applied. Change of the characteristics may occur by the magnetization of the core when excessive current is applied to a DC circuit.
- When the parts are used at high-frequency, the heat generation will be larger and the part temperature will be higher compared with DC or low-frequency. This is caused by increasing iron loss and copper loss. Please be careful not to exceed the operating temperature rise by high frequency.



Ex. Temperature rise by high frequency

- The electrical characteristics change from the variation of frequency of the parts. When the part is used above the frequency band of the SRF (self-resonant frequency), it will function as a capacitor. Please do not use the parts above the SRF.



Mounting

- Some of the inductors have magnetic polarity to which attention should be paid when mounting.
- The inductance and Q values of a non-magnetically-shielded inductor could change from magnetic coupling affected by other components, chassis, patterns, etc. When mounting in high density, check the characteristic in advance with the actual equipment. Additionally, take care of the positioning of the components since closely mounted inductors may cause magnetic coupling. Do not place large magnetic materials like audio speakers, etc. near the inductors.
- Do not expose the inductors to the heat radiation from other high temperature parts.

Reference

- For basic precautions, please refer to the Technical report of JEITA RCR-2501C Safety application guide for inductors for use in electronic equipment.

Terms and Definitions

Nominal Inductance

- Inductance that the inductor is designed to have and generally indicated on the body.

Q Value (Quality factor)

- A coefficient that shows the quality of the inductors. It is calculated from the following formula shown below.

$$Q = \frac{\omega L}{R}$$

w = Angular Frequency ($\omega=2\pi f$)
L = Inductance
R = Resistance

Self-Resonant Frequency

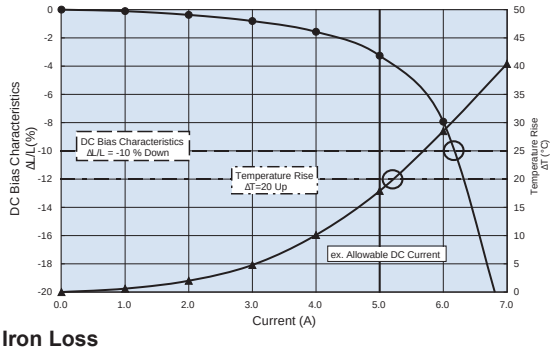
- Frequency that resonance occurs by the distribution capacity and inductance of the inductor.

DC Resistance Value

- Resistance value at DC.

Allowable DC Current

- Upper limit of the current which is set to assure the safe use of the inductor.
- It is defined as the smaller DC current value of either the DC superposition or the surface temperature rise characteristics.
- DC superposition characteristic is a phenomenon which occurs when the inductors, made with magnetic materials such as ferrite, have a large DC current applied. When this occurs, the inductance drops because of the magnetic saturation.
- The plot below shows the relationship between the DC superposition and the surface temperature rise.



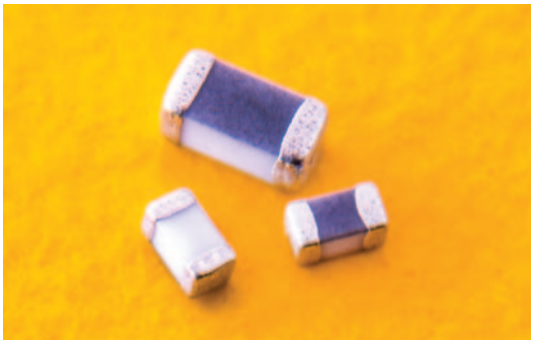
Iron Loss

- Electrical energy that is lost when the wire wound magnetic material is magnetized by the applied AC. It is calculated by the sum of hysteretic loss and eddy-current loss.

Copper Loss

- Energy that is transformed into Joule heat by the resistance of the wound wire. The Copper loss increases in the high frequency band from the skin effect.

EU RoHS COMPLIANT



features

- Monolithic structure provides high reliability in a wide temperature and humidity range
- High quality ceramic material and unique manufacturing process provides high Q at high frequency
- Nickel barrier with solder overcoat for excellent solderability
- Products with lead-free terminations meet EU RoHS requirements

EU RoHS COMPLIANT

features

- Designed to reduce noise at high frequencies
- Standard EIA packages: 1E, 1J, 2A, 2B
- Nickel barrier with solder overcoat for excellent solderability
- Marking: Black body color with no marking
- Products with lead-free terminations meet EU RoHS requirements

Precautions for the Fusing Components

Refer to the precautions in the beginning part of this catalog for the matters common to all products.

Safety Standards

- KOA's fuse components comply with the following safety standards:

U.S.A.	UL (Underwriters Laboratories Inc.) UL248
CANADA	CSA (Canadian Standards Association) C22.2 No.248 c-UL (Underwriters Laboratories Inc.) UL248 *c-UL is equivalent to CSA in recognition
INTERNATIONAL	IEC (International Electrotechnical Commission) 60127-1, -4
JAPAN	Electrical Appliances and Materials Safety Act (PSE) Class-B

Rated Current

- Specified amperage that conforms to safety standards, such as fusing time. This is not to be confused with the steady-state (stationary) current, which is calculated using the following equation:

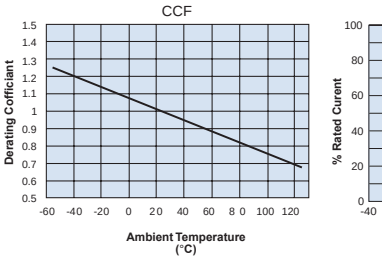
  Stationary Current ≤ Rated Current x Stationary Derating Coefficient x Ambient Temperature Derating

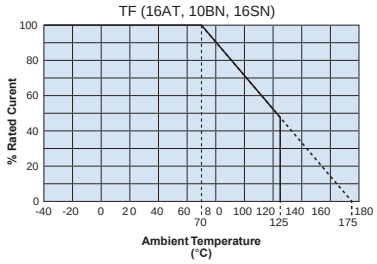
  The table below indicates deratings for each type of products.

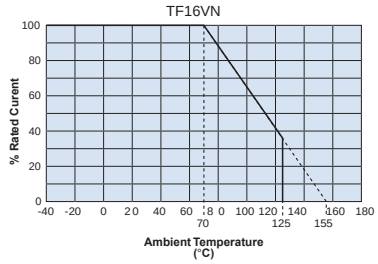
Type	Stationary Derating Coefficient
CCF1N, CCF1F	0.7
TF16AT	0.75
TF10BN, TF16SN, TF16VN	1.0

Deratings for Ambient Temperatures

The following Deratings for Ambient Temperatures are required:







- If the current waveform is a repeated pulse or AC waveform, the peak current shall be both the rated current and stationary current. Do not use the effective value of the current waveform.

Rated Voltage

- A rated voltage indicates the voltage that does not run through electrodes after the fuse blows. In case of exceeding the rated voltage, the circuit voltage should be applied at voltage not higher than the rated voltage because the current may run again or may break the elements.

Interrupting Capacity

- Maximum current and voltage that can be interrupted when an abnormal situation arises. Make sure beforehand that voltage and current at the time of abnormality occurring in the circuit are within the interrupting capacity.

Type	Fusing Current	Fusing Time
CCF1N (0.4~10)	Rated Current x 2 or Over	1 second
TF16SN	Rated Current x 2 or Over	1 second
TF10BN	Rated Current x 2 or Over	5 seconds
TF16AT	Rated Current x 2 or Over	5 seconds
TF16VN	Rated Current x 2.5 or Over	5 seconds
CCF1N (12~30)	Rated Current x 2 or Over	60 seconds
CCF1F	Rated Current x 2 or Over	60 seconds

Fusing Current

- Minimum current needed to break fusing element. Refer to the following list to quickly interrupt if an abnormal current occurred in the circuit:

  If fusing time is within 1 second, the variance in the fusing time is largely affected by the surroundings (temperature, mounting pad dimensions, substrate material, etc.). If the fusing time is not less than 1 second, the verification should be made with an actual circuit.

Anti-Surge Characteristics

Be careful of the short time over current (inrush current, reversible current at motor-lock etc.) that is generated in the circuit.

- Inrush current will differ according to the ambient temperature and the charging/discharging condition of the capacitor etc. Check the current wave form with the condition which will be the maximum current.
- When components that are highly dependent on temperatures such as thermistors are used within the circuit, check the current wave form with the condition which will be the maximum current.
- Set the sampling frequency at a level which the peak current can be detected when measuring the surge current with a digital oscilloscope.
- Generally, current probes are used for current measurement. When shunt resistors are used, be sure to use the lowest resistance value as possible according to the impedance in the circuit.

Operation Check

- Before you decide which fuse product you use, please mount the selected fuse on actual device and confirm that rush current and surge current have enough margin and that the product has performance that enables it to interrupt the abnormal current quickly.

Soldering

- This product is suitable both for reflow-soldering and for flowsoldering, but excessive heat may cause an open-circuit and change its characteristics.
- The part shall be soldered at the maximum temperature of 260°C or less.
- If a soldering iron is used, it shall be at 350°C or less and should be soldered in a short time. Further, pay attention that the products are not touched directly by the top of the iron. It may cause disconnection or characteristic change.

Placement

- Please confirm sufficiently the evaluation of reliability and use those that have small contractile stress at a resin stiffening time. By contractile stress at the resin stiffening time, fuses might be broken, resistance value may be changed and disconnection might occur in case of resin coating/potting or molded sealing. There is a possibility that heat may fill the surrounding of the fuses by shielding and may cause the fusing characteristics to change so, please check with the actual circuit.
- The fusing characteristics may change when there are components that generate heat around the fuses. Keep fuses away from those parts.

Storage

- Avoid storing components under the condition of high temperature/high humidity (40°C/70%RH or more) which may deteriorate solderability.
- Also avoid direct sun light which may deteriorate solderability and induce changes in taping strength.se parts.

Parts Selection

- If you have any questions about fuse selection, please do not hesitate contacting us.

Reference

- For basic precautions, refer to JEITA technical report "JEITA RCR-4800 Safety application guide on fuse for use in electronic and electrical equipment".

EU RoHS COMPLIANT

features

- Small, lightweight design
- Special manufacturing method stabilizing fusing characteristics and occupying less area
- Low power consumption and less voltage drop due to low internal resistance
- Suitable for overcurrent protection of circuit block in electronic devices
- Suitable for flow and reflow soldering
- Products meet EU RoHS requirements

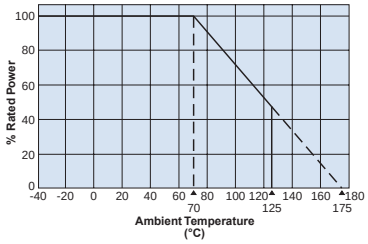
environmental applications

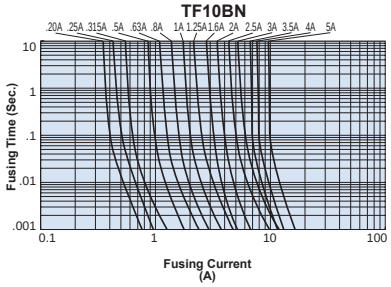
Derating Curve

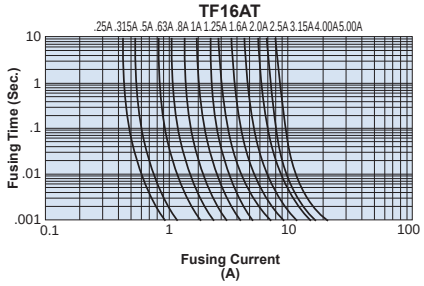


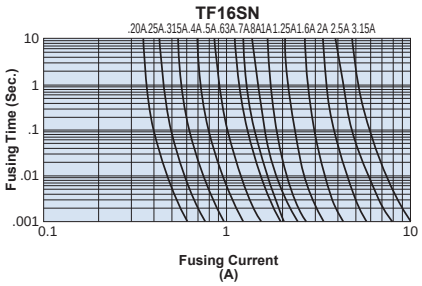
Stationary Current: Regard the peak of stationary current waveform as stationary current value when the stationary current is repeated pulse.

Temperature Derating: Rated current needs to be derated if used at an ambient temperature 70℃ or above. Refer to the derating coefficient on the left figure.

Fusing Characteristics







Performance Characteristics

Parameter	Requirement		Test Method
	Limit	Typical	
Fusing Characteristics	Within 1 second (16SN) Within 5 seconds (10BN, 16AT)	—	200% of rated voltage shall be carried (@25°C)
Bending Test	No mechanical damages	—	Distance between holding points: 90mm, Bending: 3mm, 1 time (BN, AT), 2mm, 1 time (SN)
Resistance to Solder Heat	±10%	±4.5% (16SN) ±5% (10BN, 16AT)	260°C ± 5°C, 10 seconds ± 0.5^{+1}_{-0} second
Solderability	95% coverage minimum	—	245°C ± 3°C, 3 seconds ± 0.5 second
Load Life	±10%	±4.5%(16SN) ±5% (10BN, 16AT)	70°C ± 2°C, 1000 hours, rated current x 100%, 1.5 hr ON, 0.5 hr OFF cycle
Load Life Moisture	±10%	±3% (10BN) ±4.5% (16SN), 5% (16AT)	40°C ± 2°C, 90 - 95% RH, 1000 hours, rated current x 100% (10BN, 16SN), x 75% (16AT), 1.5 hr ON, 0.5 hr OFF cycle
Rapid Change of Temperature	±10%	±4% (16SN) ±5% (10BN, 16AT)	16SN: -40°C ± 2°C (30 minutes), 10BN, 16AT: -55°C ± 2°C, +125°C (30 minutes), 10 cycles
Resistance to Solvent	No evidence of damages to protective coating and marking	—	Conforming to MIL-STD-202F
Residual Resistance	10kΩ and more	—	Measure DC resistance after fusing

KOA SPEER ELECTRONICS, INC.

TF16VN

chip current fuses for automotive

EU RoHS COMPLIANT

features

- Small and light chip current fuses for the secondary circuit
- Temperature cycle (-55°C ~ 125°C), 1000 cycle
- Original construction and manufacturing method stabilize fusing characteristics
- Suitable for overcurrent protection of circuit block in small electronic devices
- Suitable for reflow solderings
- Products meet EU RoHS requirements
- AEC-Q200 Tested

Resistance to Soldering Heat (Reflow Soldering)	10	5	Preheating: 150+30°C, 90 ± 30 seconds Heating: 230°C or more, 30 ± 10 seconds, max. 260°C
Solderability	95% coverage min.	—	245°C±3°C, 3 seconds ± 0.5 seconds
Load Life	10	5	70°C±2°C, 1000h, Rated current × 100%, 1.5h ON/0.5h OFF cycle
Load Life Moisture	10	5	85°C±2°C, 85%±5%RH, 1000h, Rated current × 10%, 1.5h ON/0.5h OFF cycle
Rapid Change of Temperature	10	5	-55°C (30min.)/+125°C (30min.) 1000 cycles
Resistance to Solvent	No evidence of damages to protective coating and marking.	—	Conforming to MIL-STD-202F
Residual Resistance	10kΩ or more	—	Measure DC resistance after fusing

EU RoHS COMPLIANT

features

- Surface mount fuse suitable for primary and secondary circuits
- Ceramic case provides excellent mechanical strength
- Suitable for flow and reflow soldering
- Stable fusing characteristics due to the original technology
- Excellent Anti-Surge characteristics
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

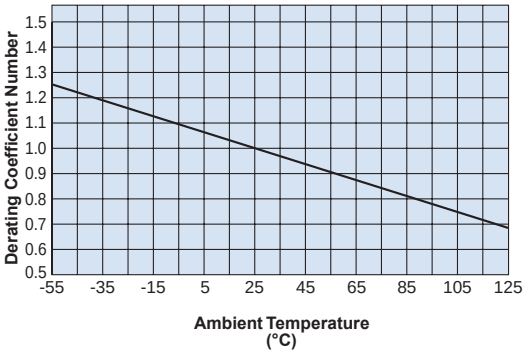
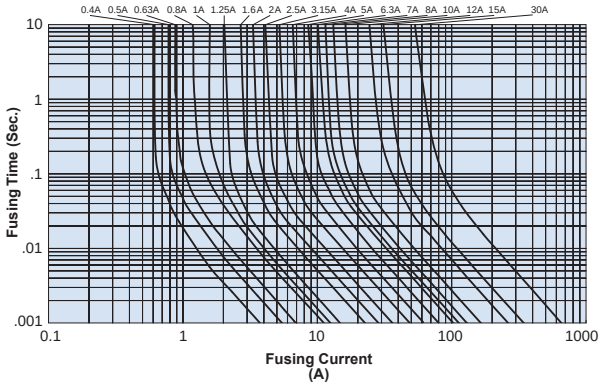
environmental applications

Deratings

- Stationary current
  Regard the peak of stationary current waveform as stationary current value when the stationary current is repeated pulse.
- Normal derating
  Normal derating of this product should be 0.7max. as standards.
- Deratings by ambient temperatures
  When using the products at the temperatures other than normal temperature (25°C ±5°C), temperature adjustment will be required. Please refer to the derating coefficient as shown in the figure.



Fusing Characteristics



Performance Characteristics

Parameter	Requirement Δ R±% Limit	Typical	Test Method
Fusing Characteristics	Within specified time. No restrike	—	Fusing time measured under rated current x 160% and 200%
Surface Temperature Rise	Max. Temp. Rise 140°C	—	Surface temperature should be measured by rated current x 115%
	Max. Temp. Rise 75°C	—	Surface temperature should be measured by rated current x 100%
Bending Test	No mechanical damages	—	Distance between holding points 90mm, bent by 3mm at rate of 1mm/s
Resistance to Soldering Heat	±10%	±3%	260°C ±5°C, 10 seconds ± 0.5 seconds
Solderability	±95% coverage min.	—	235°C ±5°C, 3 seconds ± 0.5 seconds

Precautions for the Varistors

The reliability of the metal oxide varistors are dependant on the ways of their use and could lead to accidents so please be aware.

Selection and Protection

- It is recommended that the steady-state circuit voltage which remains at 80% or less of the max. allowable circuit voltage. Exceeding the specification will cause deterioration, short-circuits, etc.
- Select proper parts according to the surge energy and the number of the impressions if the varistors are used to absorb the surge for an inductive loading.
- The rated surge endurance is defined in terms of shock wave current waveform (starting up 8µs/wave-tail length 20µs).
- Insert fuses or thermal fuses in series with varistors if the size of the surge power cannot be estimated, in order to prevent varistors from bursting due to an excessive surge over the rating.
- Give consideration on the layout to combustible materials and to take measurements on the circuits (fuses or thermal fuses) since there may be smoking or flaming if the varistor short-circuits due to an excessive surge over the rating.
- Upon mold sealing, fully confirm the reliability and use the resin which has small contractile stress at stiffening since the protection coat may peel off, cracks may occur at the solder connection, and the characteristics of the varistor may change.
- Perform the withstand voltage test and the insulation resistance test with the varistors removed from the circuit since the test voltage may exceed the varistor voltage.

Failure Mode

- Varistor voltage will drop and the leakage current will increase when excessive surge which is above the rating is applied to the varistor. Temperature will increase due to Joule heating as the leakage current increases, which will cause thermal runaway and short circuit.

Reference

- For basic precautions, please refer to the technical report of EMAJ-R039 Safety application guide for varistors.

Terms and Definitions

Maximum Allowable Circuit Voltage

- The maximum commercial frequency sinusoidal voltage effective value or maximum D.C. voltage or A.C. voltage (rms) that can be continuously applied.

Maximum Energy (E)

- The maximum energy within the varistor voltage change rate of ±10% when a single impulse of 2ms is applied.

Maximum Peak Current (I_P)

- The maximum peak current within the varistor voltage change rate of ±10%, when a single standard impulse of 8/20µs is applied.

Operating Temperature (T_{opt})

- The allowable ambient temperature range while the device is operating.

Storage Temperature (T_{stg})

- The temperature range in which the elements do not deteriorate.

Varistor Voltage (V_C)

- The terminal voltages on both ends of the varistor when the specified current is applied.

Clamping Voltage (V_P)

- The peak value of the voltage between two terminals of the varistor when the specified standard waveform impulse current (8/20µs) is applied.

Recommended value of varistor voltage for the power supply voltage

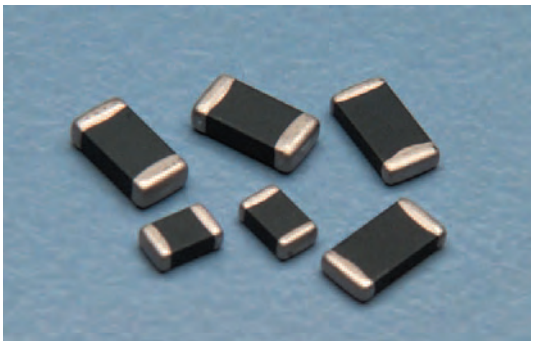
Voltage of Power Line	Varistor Voltage
3.3V d.c.	8.2V
5V d.c.	8.2V, 12V
12V d.c.	24V, 27V
24V d.c.	47V, 56V
48V d.c.	82V, 100V

KOA SPEER ELECTRONICS, INC.

NV73

metal oxide varistor

EU RoHS COMPLIANT



features

- Varistors own two-way symmetries and can absorb positive and negative surges
- Multilayer construction allows its small size to absorb a large surge
- Small space and high density mounting available due to the small package
- Suitable for both flow and reflow solderings
- Products with lead free termination meet EU RoHS requirements

NV73S

multilayer type metal oxide varistors

EU RoHS COMPLIANT

NEW

features

- Varistors own two-way symmetries and can absorb positive and negative surges
- Multilayer construction allows its small size to absorb a large surge
- Small space and high density mounting available due to the small package
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements

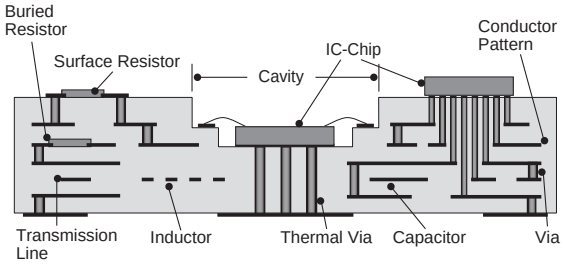
construction



ordering information

New Part # | KLC | AB1

KLC: Type

AB1: KOA Ref. Number

features

- Suitable for bare chip mounting as it has thermal expansion coefficient close to that of silicon and excellent dimensional accuracy and flatness.
- Excellent high frequency characteristics are achieved by the low-loss dielectric ceramic and the low-loss conductor.
- Downsizing and high integration density can be achieved by the multilayer wiring, the multi-cavity structure and the surface/buried resistor printing.
- The substrate and the cavity can be formed in round, polygonal, concave or convex shape.
- Thermal vias can be placed in the bare chip mounting area to improve the thermal conductivity of the substrate.
- The use of ceramic material contribute to the excellent heat and humidity resistance and prevents outgas and dust generation.
- Products meet EU RoHS requirements

what is LTCC ?

LTCC stands for Low Temperature Co-fired Ceramics.

LTCCs are multilayer ceramic substrates that can be fired simultaneously with low-resistance conductors since the glass-based material is added to the alumina material to lower the firing temperature compared to the general ceramic firing process.

On KOA's LTCC, silver (Ag) based paste that has low conductor resistance is co-fired to create the conductor patterns on each layer of the ceramic substrate.

It realizes the multilayer substrate with excellent low-loss electrical characteristics as well as high dimensional accuracy.

KOA's LTCC also provides downsizing by integrating resistors and transmission lines in the inner and surface layers of the substrate. In addition, the thermal expansion coefficient close to silicon enhances the reliability of the bare chip mounting, and the cavity structure contributes to the lower profile package.

high-precision specification

Substrates with higher precision based on the LTCC multilayer substrate are available.

- High-precision pad positioning and excellent flatness.
- High-density wiring structure by utilizing LTCC multilayer substrate.

Please contact us for details.

environmental applications

Characteristics of Substrate Material

Parameter	Characteristics
Bending Strength (MPa)	250
Thermal Expansion Coefficient (x10^{-6}/K)	5.5
Thermal Conductivity (W/m • K)	3
Insulation Resistance (Ω • cm)	>10^{13}
Dielectric Constant at 1GHz	6.6
Dielectric Loss at 1GHz	0.004
Density (g/cm^3)	2.8
Surface Roughness Ra (μm)	<0.4
Withstanding Voltage (kV/mm)	>15
Substrate Thickness (mm)	0.4~2.0 Standard
Layer Thickness (μm/Layer)	80, 100, 125 Standard

Standard Design Rules

Symbol	Parameter	Design Value
A	Line Width	0.06mm Min.
B	Line to Line Spacing	0.06mm Min.
C	Via Diameter	0.1mm, 0.15mm, 0.2mm
D	Via Pad Diameter	Via diameter +0.05mm Min.
E	Via to Via Spacing	0.2mm Min.
F	Via pad to Line Spacing	0.125mm Min.
G	Part Edge to Conductor Spacing	0.2mm Min.
H	Part Edge to Via Spacing	0.3mm Min.

substrates & others

features

- Plural semiconductors in one package offers downsized system with high performance and standardization
- Wiring space saving by multilayer fine patterns on build-up substrate. No signal delay by shortened wiring distance
- Less mounting problem because of the decreasing number of the terminals

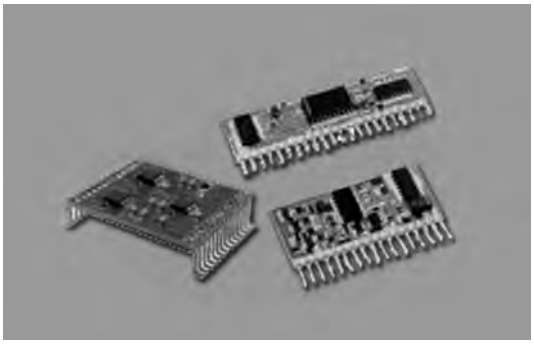
EU RoHS COMPLIANT



features

- Surface-mountable chip type test terminal
- Automatic mounting can be done by an ordinary chip mounter
- Inch size code 1206, 0805 and 0603 are available. (for size 1206, two kinds of the height 1.25mm and 2mm are provided.)
- Suitable for both flow and reflow solderings
- Since only the outside surface is solder-plated, the inside is structured unsolderable
- Products meet EU-RoHS requirements
- AEC-Q200 Tested

surface mount resistors

Anti-Sulfur Precision Flat Chip Resistors

RK73H1ERT-Kit1 (0402 chip size)
122 values, 100 pcs each

RK73H1JRT-Kit1 (0603 chip size)
122 values, 100 pcs each

Precision Flat Chip Resistors

RK73H1FTK001Kit (01005 chip size)
38 values, Lead-free, 25 pcs each (10R0 ~ 620K = ±1%)

RK73H1HTK001Kit (0201 chip size)
217 values, Lead-free, 50 pcs each (0, 10R0 ~ 1M00 = ±1%)

RK73H1ETK001 (0402 chip size)
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%) E-24

RK73H1JTK001 (0603 chip size)
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%) E-24

RK73H2ATK001 (0805 chip size)
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%)

RK73H2BTK001 (1206 chip size)
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%)

General Purpose Flat Chip Resistors

RK73B1FTK001Kit (01005 chip size)
51 values, Lead-free, 25 pcs each (0, 10 ~ 1M = ±5%)

RK73B1HTK001Kit (0201 chip size)
139 values, Lead-free, 50 pcs each (0, 2R2 ~ 2M2 = ±5%)

High Voltage Flat Chip Resistors

HV73TK001Kit (0603, 0805, 1206, 2010 chip sizes)
156 values, Lead-free, 25 pcs each (10k ~ 10M = +1%)

Surge Current Flat Chip Resistors

SG73TK001Kit (0603, 0805, 1206, 1210, 2010, 2512 chip sizes)
204 values, ±10%, Lead-free, 25 pcs each

SG73STK001Kit (0603, 0805, 1206, 1210 chip sizes)
101 values, ±1%, Lead-free, 25 pcs each

SG73PTK001Kit (0603, 0805, 1206, 1210 chip sizes)
97 values, ±1%, Lead-free, 25 pcs each

Wide Terminal Flat Chip Resistors

WK731JT-Kit1 (0306 chip size) (WK73R Series)
73 values, Lead-free, 100 pcs each (±1%)

WK732AT-Kit1 (0508 chip size)
138 values, Lead-free, 100 pcs each (±1%)

NEW **WK732BT-Kit1 (1206 chip size)**
145 values, Lead-free, 100 pcs each (±5%)

WK73TK001Kit (0612, 1020 & 1225 chip sizes)
64 values, Lead-free, 25 pcs each (±1%, ±5%)

WU73TK001Kit (0612 chip sizes)
27 values, Lead-free, 20 pcs each (±1%)

Circuit Protection - Fuses

CCFTK001Kit (2410 chip size)
18 values, Lead-free, 20 pcs each

FuseKit-TF10BN (0402 chip size)
12 values, Lead-free, 100 pcs each

FuseKit-TF16SN (0603 chip size)
14 values, Lead-free, 100 pcs each

FuseKit-TF16AT (0603 chip size)
13 values, Lead-free, 100 pcs each

Ultra Precision Flat Chip Resistor

RN73H1ET-Kit (0402 chip size)
49 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)

RN73H1JT-Kit (0603 chip size)
67 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)

RN73H2AT-Kit (0805 chip size)
73 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)

RN73R1ET-Kit1 (0402 chip size)
49 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

RN73R1JT-Kit1 (0603 chip size)
67 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

RN73R2AT-Kit1 (0805 chip size)
73 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

RN73R2BT-Kit1 (1206 chip size)
74 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

NEW **RS73F1ET-Kit1 (0402 chip size)**
86 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

RS73F1JT-Kit1 (0603 chip size)
121 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

NEW **RS73F2AT-Kit1 (0805 chip size)**
132 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

NEW **RS73F2BT-Kit1 (1206 chip size)**
138 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

NOTE: Reference product data pages for available values.

current sense resistors

Surface Mount Molded

SLW07TK001Kit (2010, 1W size)
27 values, 20 pcs each (±1%)

SLW1TK001Kit (2512, 1.5W size)
25 values, 20 pcs each (±0.5%)

SL1TK001Kit (2512, 1W size)
33 values, 20 pcs each (±1%)

SL2TK001Kit (4528, 2W size)
45 values, 20 pcs each (±1%)

SL3TK001Kit (4528, 3W size)
33 values, 20 pcs each (±1%)

SLN3TK001Kit (4528, 3W size)
32 values, 20 pcs each (±0.5%)

SLN5TK001Kit (4528, 5W size)
21 values, 10 pcs each (±0.5%)

TSL1TK001Kit (2512, 1W size)
33 values, Lead-free, 20 pcs each (±1%)

SLRTK001Kit (2513, 1W size)
40 values, 15 pcs each (±1%)

Metal Plate

TLR2ATK001Kit (0805 chip size)
6 values, 20 pcs each (±1%)

TLR2BWD-Kit (1206 chip size)
17 values, 15 pcs each (±1%)

TLR2HW-Kit (2010 chip size)
10 values, 15 pcs each (±1%)

TLR3APD-Kit (2512 chip size)
10 values, 20 pcs each (±1%)

TLRDK001Kit (1206, 2010, 2512 chip sizes)
36 values, Lead-free, complete range, 20 pcs each (±1%)

TLR2BP-Kit (1206 chip size)
17 values, 15 pcs each (±1%)

Chip Resistors

UR73TK001Kit (0402, 0603, 0805, 1206, 2010, 2512 chip sizes)
144 values, Lead-free, 20 pcs each (±1%)

UR73VTK001Kit (1206 chip sizes)
8 values, 20 pcs each (±1%)

Thick Film

SR731HTK001Kit (0201 chip size)
29 values, Lead-free, 50 pcs each (R47 ~ 10R0, ±1%, ±5%)

SR731ETK001Kit (0402 chip size)
25 values, Lead-free, 50 pcs each (R100 ~ 1R00, ±1%)

SR731JTK001Kit (0603 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732ATK001Kit (0805 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732BTK001Kit (1206 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732ETK001Kit (1210 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732HTK001Kit (2010 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR733ATK001Kit (2512 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

Power Shunt

PSF4-Kit (1216 chip size)
2 values, Lead-free, 10 pcs each (±1%)

PSL2-Kit (2512 chip size)
3 values, Lead-free, 10 pcs each (±1%)

Notes

world class
quality

Successful companies recognize the value in selecting suppliers committed to total quality. KOA Speer has long embraced the principals of continuous improvement to attain new performance levels in every aspect of customer support. Our manufacturing programs redefine industry standards with defect levels measured in parts per billion. This organization-wide focus on quality resulted in our receiving ISO 9001:2015 certification. In addition, our quality program has received the more stringent IATF16949:2016 certification required to be a tier one supplier in the automotive industry.

customer
programs

KOA Speer can play a vital role in helping your operation achieve maximum efficiency. Our sales/customer service representatives will meet with your design, production and purchasing teams to create a program that makes sense for your organization. Among the areas we regularly address are data entry and access through customized EDI, and inventory management through dock-to-stock and JIT programs. Our willingness to not only develop these programs but to execute them as promised, makes KOA Speer a dependable partner worth integrating into your operation.

responsive
service

Providing products and answers when you need them is a fundamental policy at KOA Speer. Our 185,000 square foot warehouse features an automated material handling system based upon bar coding and radio frequency data communication (RFDC) to maintain an inventory of billions of components, while shipping millions of components per day. Standard product availability, the industry's most extensive electronic data interchange (EDI) program and a willingness to inventory to customer requirements, make KOA Speer JIT delivery an integral part of our customer's efforts at improving efficiency.
